Navy Virginia-Class Submarine Program and AUKUS Submarine Proposal: Background and Issues for Congress

February 7, 2024

Congressional Research Service

<https://crsreports.congress.gov>

RL32418

Summary

Issues for Congress regarding the Navy's Virginia (SSN-774) class nuclear-powered attack submarine (SSN) program include the FY2024 procurement funding request for the program and the proposal for selling three to five Virginia-class boats to Australia and transferring U.S. submarine and naval nuclear propulsion technology to Australia under a U.S.-UK-Australia security agreement called AUKUS.

Virginia-class FY2024 procurement funding. The Navy has been procuring Virginia (SSN-774) class nuclear-powered attack submarines (SSNs) since FY1998, and a total of 38 have been procured through FY2023. Since FY2011, Virginia-class boats have been procured at a rate of two per year. Most Virginia-class boats procured in FY2019 and subsequent years are to be built with the Virginia Payload Module (VPM), an additional, 84-foot-long, mid-body section equipped with four large-diameter, vertical launch tubes for storing and launching additional Tomahawk missiles or other payloads. When procured at a rate of two boats per year, VPM-equipped Virginia-class SSNs have an estimated procurement cost of about \$4.3 billion per boat. The Navy's current ship force-level goal, which was released in December 2016, calls for achieving and maintaining a fleet of 355 manned ships, including 66 SSNs. The Navy currently has about 50 SSNs. Under the Navy's FY2024 30-year (FY2024-FY2053) shipbuilding plan, which includes three alternatives, the SSN force would decline to a low point of 46 boats in FY2030 and grow to 60, 69, or 63 boats by FY2053.

The Navy's proposed budget requests the procurement of the 39th and 40th Virginia-class boats. The Navy's FY2024 budget submission states that one of the two boats is to be built to a special configuration referred to as the "Modified VIRGINIA Class Subsea and Seabed Warfare (Mod VA SSW)" configuration. The two boats have an estimated combined procurement cost of \$9,427.6 million (i.e., about \$9.4 billion), and have received a combined total of \$2,297.7 million in prior-year advance procurement (AP) funding. The Navy's proposed FY2024 budget requests the remaining \$7,130.0 million needed to complete their estimated combined procurement cost, as well as \$1,855.5 million in AP funding for Virginia-class boats to be procured in future fiscal years, \$1,360.0 million in Economic Order Quantity (EOQ) funding, which is an additional kind of AP funding that can occur under a multiyear procurement (MYP) contract, and \$168.2 million in cost-to-complete (CTC) funding to cover cost growth on Virginia-class boats procured in prior years. In addition to these requested funds, on October 20, 2023, the Administration submitted a request for FY2024 emergency supplemental funding that includes, among other things, a total of \$3,393.2 million in funding for the submarine industrial base to support construction of new submarines and maintenance of existing submarines.

AUKUS submarine proposal. In September 2021, the U.S., UK, and Australian governments announced a significant new security partnership, called AUKUS. The proposed first major initiative under AUKUS, referred to as Pillar 1, would be a project to rotationally deploy up to five U.S. and UK SSNs out of a port in Western Australia, and more significantly, for Australia, with U.S. and UK assistance, to acquire, operate, and maintain its own force of eight conventionally armed SSNs, including three to five Virginia-class SSNs that would be sold to Australia. Key issues for Congress regarding the proposed Pillar 1 pathway include the following: Should Congress decide in 2023 whether approve, reject, or modify the legislation requested to implement Pillar 1, as the Administration is requesting, or defer a decision until 2024 or later? How do the potential benefits, costs, and risks of the proposed Pillar 1 pathway compare to those of a potential alternative of a U.S.-Australia division of labor on SSNs?

Introduction

This report provides background information and issues for Congress on

- the Virginia (SSN-774) class nuclear-powered attack submarine (SSN) procurement program, and
- a proposal for selling three to five Virginia-class SSNs and transferring U.S. submarine and naval nuclear propulsion technology to Australia under a U.S.-UK-Australia security agreement called AUKUS.

The Navy has been procuring Virginia-class SSNs since FY1998, and a total of 38 have been procured through FY2023. Since FY2011, Virginia-class boats have been procured at a rate of two per year. The Navy's proposed FY2024 budget requests the procurement of the 39th and 40th Virginia-class boats.

Issues for Congress include those relating to the proposed procurement of Virginia-class boats in FY2024 and subsequent years, and those relating to the proposal under the AUKUS agreement for selling three to five Virginia-class boats and transferring U.S. submarine and naval nuclear propulsion technology to Australia under AUKUS. Decisions that Congress makes on these issues could substantially affect U.S. Navy capabilities and funding requirements, Australian military capabilities, and the U.S. shipbuilding industrial base.

The Navy's SSN(X) next-generation attack submarine program, which is to be the eventual successor to the Virginia-class SSN program, is discussed in another CRS product: CRS In Focus IF11826, *Navy Next-Generation Attack Submarine (SSN[X]) Program: Background and Issues for Congress*, by Ronald O'Rourke.

The Navy's Columbia (SSBN-826) class ballistic missile submarine program is discussed in another CRS report: CRS Report R41129, *Navy Columbia (SSBN-826) Class Ballistic Missile Submarine Program: Background and Issues for Congress*, by Ronald O'Rourke.

Background

U.S. Navy Submarines¹

The U.S. Navy operates three types of submarines—nuclear-powered ballistic missile submarines (SSBNs),² nuclear-powered cruise missile and special operations forces (SOF) submarines (SSGNs),³ and nuclear-powered attack submarines (SSNs). The SSNs are general-purpose

¹ In U.S. Navy submarine designations, SS stands for submarine, N stands for nuclear-powered, B stands for ballistic missile, and G stands for guided missile (such as a cruise missile). Submarines can be powered by either nuclear reactors or nonnuclear power sources such as diesel engines or fuel cells. All U.S. Navy submarines are nuclear-powered. A submarine's use of nuclear or nonnuclear power as its energy source is not an indication of whether it is armed with nuclear weapons—a nuclear-powered submarine can lack nuclear weapons, and a nonnuclear-powered submarine can be armed with nuclear weapons.

² The SSBNs' basic mission is to remain hidden at sea with their nuclear-armed submarine-launched ballistic missiles (SLBMs) and thereby deter a strategic nuclear attack on the United States. The Navy's SSBNs are discussed in CRS Report R41129, *Navy Columbia (SSBN-826) Class Ballistic Missile Submarine Program: Background and Issues for Congress*, by Ronald O'Rourke, and CRS Report RL31623, *U.S. Nuclear Weapons: Changes in Policy and Force Structure*, by Amy F. Woolf.

³ The Navy's four SSGNs are former Trident SSBNs that have been converted (i.e., modified) to carry Tomahawk cruise missiles and SOF rather than SLBMs. Although the SSGNs differ somewhat from SSNs in terms of mission (continued...)

submarines that can (when appropriately equipped and armed) perform a variety of peacetime and wartime missions, including the following:

- covert intelligence, surveillance, and reconnaissance (ISR), much of it done for national-level (as opposed to purely Navy) purposes;
- covert insertion and recovery of SOF (on a smaller scale than possible with the SSGNs);
- covert strikes against land targets with the Tomahawk cruise missiles (again on a smaller scale than possible with the SSGNs);
- covert offensive and defensive mine warfare;
- anti-submarine warfare (ASW); and
- anti-surface warfare, or ASuW (i.e., attacking surface ships).

The technical (including acoustic) superiority of U.S. Navy nuclear-powered submarines is generally considered a foundation of U.S. superiority in undersea warfare, which in turn underpins a U.S. ability to leverage the world's oceans as a medium of operations and maneuver, deny that to others, and thereby generate a huge asymmetric strategic advantage for the United States. During the Cold War, ASW against Soviet submarines was the primary stated mission of U.S. SSNs, although covert ISR and covert SOF insertion/recovery operations were reportedly important on a day-to-day basis as well.⁴ In the post-Cold War era, although ASW remained a mission, the SSN force focused more on performing the first three other missions listed above. With the shift from the post-Cold War era to a situation of renewed great power competition,⁵ ASW and ASuW against Russian and Chinese submarines and surface ships has become a more prominent mission. DOD officials and other observers view SSNs as particularly useful for implementing certain elements of the national defense strategy because of their ability to evade China's improving anti-access/area-denial (A2/AD) forces.⁶

U.S. SSN Force Levels

Force-Level Goal

Goal Current Force-Level Goal of 66 Boats within 355-Ship Plan

The Navy's current force-level goal, released in December 2016, is to achieve and maintain a fleet of 355 manned ships, including 66 SSNs.⁷

orientation (with the SSGNs being strongly oriented toward Tomahawk strikes and SOF support, while the SSNs are more general-purpose in orientation), SSGNs can perform other submarine missions and are sometimes included in counts of the projected total number of Navy attack submarines. The Navy's SSGNs are discussed in CRS Report RS21007, *Navy Trident Submarine Conversion (SSGN) Program: Background and Issues for Congress*, by Ronald O'Rourke.

⁴ For an account of certain U.S. submarine surveillance and intelligence-collection operations during the Cold War, see Sherry Sontag and Christopher Drew with Annette Lawrence Drew, *Blind Man's Bluff* (New York: Public Affairs, 1998).

⁵ For more on this shift, see CRS Report R43838, *Great Power Competition: Implications for Defense—Issues for Congress*, by Ronald O'Rourke.

⁶ For additional discussion, see CRS Report RL33153, *China Naval Modernization: Implications for U.S. Navy Capabilities—Background and Issues for Congress*, by Ronald O'Rourke.

⁷ For more on the 355-ship force-level goal, see CRS Report RL32665, *Navy Force Structure and Shipbuilding Plans: Background and Issues for Congress*, by Ronald O'Rourke.

Emerging Successor Force-Level Goal

The Navy and Department of Defense (DOD) since 2019 have been working to develop a new force-level goal to replace the 355-ship force-level goal. Studies of this emerging force-level goal that have been released by the Navy in summary form suggest that the new force-level goal could call for achieving and maintaining a force of 66 to 72 SSNs.⁸ For a review of SSN force-level goals since the Reagan Administration, see **Appendix A**.

Past and Current Force Levels

During most of the 1980s, when plans called for achieving a 600-ship Navy including 100 SSNs, the SSN force included more than 90 boats, peaking at 98 boats at the end of FY1987. The number of SSNs declined after that in a manner that roughly paralleled the decline in the total size of the Navy over the same time period. The 50 SSNs in service at the end of FY2022 included the following:

- 26 Los Angeles (SSN-688) class boats;
- 3 Seawolf (SSN-21) class boats; and
- 21 Virginia (SSN-774) class boats.

The three classes of SSNs listed above are discussed further later in this report. In addition to the 50 SSNs shown above, the Navy operates four Ohio (SSBN-726) class SSGNs. Compared to the Navy's SSNs, the SSGNs have a much larger capacity for carrying cruise missiles and SOF, but they are nevertheless general-purpose submarines that can perform missions performed by SSNs.

Projected Procurement Rates and Force Levels

The Navy's FY2024 five-year (FY2024-FY2028) shipbuilding plan includes a total of 10 Virginia-class boats, to be procured at a rate of two per year. The Navy's FY2024 30-year (FY2024-FY2053) shipbuilding plan includes three alternative 30-year shipbuilding profiles for the period FY2029-FY2053. Under these profiles, the SSN force would reach a minimum of 46 boats in FY2030 and grow to 60, 69, or 63 boats by FY2053. Under the alternative where the force grows to 69 boats by FY2053, the force would reach 66 boats in FY2049.

The number of boats in the SSN force is projected to experience a valley or trough from the mid-2020s through the early 2030s. This valley is a projected consequence of having procured a relatively small number of SSNs during the 1990s, in the early years of the post-Cold War era. The projected SSN valley was first identified by CRS in 1995 and has been discussed in CRS reports and testimony every year since then. As noted above, the FY2024 30-year shipbuilding plan projects that the SSN force would reach a minimum of 46 boats in FY2030, return to 50 boats in FY2032, and then grow to more than 50 boats starting in FY2036.

Some observers are concerned that this projected valley in SSN force levels could lead to a period of heightened operational strain for the SSN force, and perhaps a period of weakened conventional deterrence against potential adversaries such as China.⁹ To help fill in part of the

⁸ For the effort to develop a successor to the 355-ship goal of 2016, including the studies that the Navy has released in summary form, see CRS Report RL32665, *Navy Force Structure and Shipbuilding Plans: Background and Issues for Congress*, by Ronald O'Rourke.

⁹ China took note of the projected valley. The November 2014 edition of a Chinese military journal, for example, included an article with a passage that translates as follows:

... in 2028, the [U.S. Navy] force of nuclear attack submarines will fall from the current number of (continued...)

projected valley, the Navy plans to refuel and extend the service lives of up to seven Los Angeles-class SSNs, while also pursuing “updated service life estimates for the remaining 688s based on current hull by hull utilization.”¹⁰

Submarine Construction Industrial Base

U.S. Navy submarines are built by General Dynamics’ Electric Boat Division (GD/EB) of Groton, CT, and Quonset Point, RI, and Huntington Ingalls Industries’ Newport News Shipbuilding (HII/NNS), of Newport News, VA. These are the only two shipyards in the country capable of building nuclear-powered ships. GD/EB builds submarines only, while HII/NNS also builds nuclear-powered aircraft carriers and is capable of building other types of surface ships.

In addition to GD/EB and HII/NNS, the submarine construction industrial base includes 16,000 suppliers in all 50 states,¹¹ as well as laboratories and research facilities in numerous states. Much of the total material procured from supplier firms for the construction of submarines comes from sole-source suppliers. For nuclear-propulsion component suppliers, an additional source of stabilizing work is the Navy’s nuclear-powered aircraft carrier construction program.¹² Much of the design and engineering portion of the submarine construction industrial base is resident at GD/EB; additional portions are resident at HII/NNS and some of the component makers.

SSN Maintenance Backlog

As shown in **Table 1**, the number of SSNs either in depot maintenance or idle (i.e., awaiting depot maintenance) has increased from 11 boats (about 21% of the SSN force) in FY2012 to 18 boats (about 37% of the SSN force) as of May 2023. In advance policy questions submitted for a September 14, 2023, hearing before the Senate Armed Services Committee to consider her nomination to be Chief of Naval Operations, Admiral Lisa Franchetti, the Vice Chief of Naval Operations, stated that the fraction of the SSN force either in depot maintenance or idle had been reduced since May 2023 to 33%.¹³

55 down to 41 boats. Some are concerned about whether this force level can meet the requirements of the Asia-Pacific rebalance.”

(Lyle Goldstein, “Evolution of Chinese Power Projection Capabilities,” presentation to Center for a New American Security (CNAS) roundtable discussion, September 29, 2016, slide 7 of 41.)

¹¹ Source: CQ transcript of spoken testimony of Erik Raven, Under Secretary of the Navy, at an October 25, 2023, hearing on the submarine industrial base and its ability to support the AUKUS framework before the Seapower and Projection Forces Subcommittee of the House Armed Services Committee. See also Joint Statement, Honorable Erik K. Raven, Under Secretary of the Navy, VADM William J. Houston, Commander, Naval Submarine Forces, [and] RDML Jonathan Rucker, Program Executive Officer, Attack Submarines, before the House Committee on Armed Services Subcommittee on Seapower and Projection Forces, October 25, 2023, p. 5.

¹² For more on this program, see CRS Report RS20643, *Navy Ford (CVN-78) Class Aircraft Carrier Program: Background and Issues for Congress*, by Ronald O’Rourke. In terms of work provided to these firms, the Navy states that a carrier nuclear propulsion plant is roughly equivalent to five submarine propulsion plants.

¹³ Senate Armed Services Committee, Advance Policy Questions for Admiral Lisa M. Franchetti, USN, Nominee for Appointment to be Chief of Naval Operations, pp. 31, 32.

The Navy has stated that industry best practice would call for about 20% of the SSN force to be in depot maintenance (and for none to be idle) at any given moment,¹⁴ and Admiral Franchetti has stated that the Navy has adopted the 20% figure as its goal.¹⁵ As also shown in **Table 1**, the increase since FY2012 in the number of SSNs in depot maintenance or idle has substantially reduced the number of SSNs operationally ready at any given moment, reducing the SSN force’s capacity for meeting day-to-day mission demands and potentially putting increased operational pressure on SSNs that are operationally ready.

Table 1. Numbers of SSNs in Maintenance or Awaiting Maintenance

Average number or percentage of SSNs for each fiscal year

Fiscal year	Number in force	Number in depot maintenance	Number awaiting depot maintenance (aka idle)	Combined number in depot maintenance or idle	% of force in depot maintenance or idle	Number operationally ready
FY08	51	11	0	11	22%	40
FY09	52	10	1	11	21%	41
FY10	52	10	0	10	19%	42
FY11	52	11	0	11	21%	41
FY12	53	10	1	11	21%	42
FY13	53	12	0	12	23%	41
FY14	53	13	2	15	28%	38

¹⁵ Senate Armed Services Committee, Advance Policy Questions for Admiral Lisa M. Franchetti, USN, Nominee for Appointment to be Chief of Naval Operations, pp. 31, 32.

The increase in the number of SSNs in depot maintenance or idle is due primarily to insufficient numbers of workers and facility constraints at the four government-operated Naval Shipyards (NSYs), which are the primary facilities for performing depot-level overhaul and maintenance work on the Navy's nuclear-powered ships, including the SSNs. Supply chain issues affecting the availability of repair parts for SSNs are an additional issue. To address capacity constraints at the NSYs, the Navy has increased staffing at the NSYs and in 2018 began a 20-year, multibillion-dollar investment plan, called the Shipyard Infrastructure Optimization Program (SIOP), to modernize the NSYs' facilities.¹⁶ The Navy has also shifted a small number of SSN overhauls to GD/EB and HII/NNS. For additional background information on the SSN maintenance backlog, which has been a matter of concern and oversight for the congressional defense committees, see **Appendix C**.

U.S. SSN Classes¹⁷

Los Angeles (SSN-688) Class

A total of 62 Los Angeles-class submarines, commonly called 688s, were procured between FY1970 and FY1990 and entered service between 1976 and 1996. They are 360 feet long, have a beam (i.e., hull diameter) of 33 feet, and have a submerged displacement of about 6,900 tons. They are equipped with four 21-inch diameter torpedo tubes and can carry a total of about 26 torpedoes in their torpedo tubes and internal magazines. The final 31 boats in the class (SSN-719 and higher) were built with an additional 12 vertical launch system (VLS) tubes in their bows for carrying and launching 12 Tomahawk cruise missiles. The final 23 boats in the class (SSN-751 and higher) incorporate further improvements and are referred to as Improved Los Angeles-class boats or 688Is. As of the end of FY2022, 36 of the 62 boats in the class had been retired.

Seawolf (SSN-21) Class

Seawolf (SSN-21) class submarines are larger and more heavily armed than Los Angeles-class submarines. They are equipped with eight 30-inch-diameter torpedo tubes and can carry a total of 50 torpedoes or cruise missiles. The Seawolf class was originally intended to include about 30 boats, but Seawolf-class procurement was stopped after three boats as a result of the end of the Cold War and associated changes in military requirements and defense spending levels. The three Seawolf-class submarines are *Seawolf* (SSN-21), *Connecticut* (SSN-22), and *Jimmy Carter* (SSN-23).

SSN-21 and SSN-22 were procured in FY1989 and FY1991 and entered service in 1997 and 1998, respectively. They are 353 feet long, have a beam of 40 feet, and have a submerged displacement of 9,138 tons. SSN-23 was originally procured in FY1992. Its procurement was suspended in 1992 and then reinstated in FY1996. It entered service in 2005. SSN-23 was built to a lengthened configuration compared to the other two ships in the class—it is 453 feet long (i.e., 100 feet longer than SSN-21 and SSN-22), has a beam of 40 feet, and has a submerged

¹⁶ For an overview of the SIOP, see U.S. Navy, Naval Sea Systems Command, "Shipyard Infrastructure Optimization Program" accessed June 22, 2023, at <https://www.navsea.navy.mil/Home/Shipyards/SIOP/>. See also Government Accountability Office, *Navy Readiness[:] Actions Needed to Address Cost and Schedule Estimates for Shipyard Improvement*, GAO-23-106067, June 2023, 49 pp.; Government Accountability Office, *Naval Shipyards[:] Ongoing Challenges Could Jeopardize Navy's Ability to Improve Shipyards*, Statement of Diana C. Maurer, Director, Defense Capabilities and Management, Testimony Before the Subcommittees on Readiness and Management Support and Seapower, Committee on Armed Services, U.S. Senate, GAO 22-105993, May 10, 2022, 18 pp.

¹⁷ Source for submarine lengths, beams (i.e., hull diameters), and submerged displacements: U.S. Navy, "Attack Submarines—SSN," updated March 13, 2023.

displacement of 12,158 tons. The Navy states that SSN-23 includes “a 100-foot-long, 2,500-ton hull extension, known as the multi-mission platform, to test new generations of weapons and support Navy SEAL (Sea, Air and Land forces) operations.”¹⁸

Virginia (SSN-774) Class

The Navy has been procuring Virginia-class SSNs (**Figure 1**, **Figure 2**, and **Figure 3**) since FY1998; the first entered service in October 2004. The Virginia-class design was developed to be less expensive and better optimized for post-Cold War submarine missions than the Seawolf-class design. The baseline Virginia-class design is 377 feet long, has a beam of 34 feet, and has a submerged displacement of about 7,800 tons. Virginia-class boats are equipped with four 21-inch diameter torpedo tubes and can carry a total of about 25 torpedoes in their torpedo tubes and internal magazines. Virginia-class boats are also equipped with vertical launch tubes in their bows for carrying and launching 12 Tomahawk cruise missiles.

Figure 1. Virginia-Class Attack Submarine

Source: Cropped version of photograph accompanying Dan Ward, “Opinion: How Budget Pressure Prompted the Success of Virginia-Class Submarine Program,” *USNI News*, November 3, 2014. The caption credits the photograph to the U.S. Navy and states that it shows USS *Minnesota* (SSN-783) under construction in 2012.

Virginia-class boats equipped with the Virginia Payload Module (VPM; see discussion below) are 84 feet longer—they are 461 feet long, have a beam of 34 feet, and have a submerged displacement of about 10,200 tons. The VPM can be armed with 28 additional Tomahawk cruise missiles. In addition to the VPM, the Virginia-class design has been updated multiple times in other ways since FY1998.

Virginia-Class Program

Program Elements

Unit Procurement Cost

Most Virginia-class boats to be procured in FY2019 and subsequent years are to be built to a lengthened configuration that includes the Virginia Payload Module (VPM—see discussion below). When procured at a rate of two boats per year, VPM-equipped Virginia-class SSNs have an estimated procurement cost in FY2025 of about \$4.3 billion per boat.

Annual Procurement Quantities

Table 2 shows annual numbers of Virginia-class boats procured from FY1998 (the lead boat) through FY2023, and the numbers projected for procurement in FY2024-FY2028 under the Navy’s FY2024 budget submission. A total of 38 Virginia-class boats have been procured through FY2023.

Table 2. Actual and Projected Virginia-Class Procurement Quantities

Projected quantities for FY2024-FY2028 as shown in Navy’s FY2024 budget submission

FY98	1	FY06	1	FY14	2	FY22	2
FY99	1	FY07	1	FY15	2	FY23	2
FY00	0	FY08	1	FY16	2	FY24	2
FY01	1	FY09	1	FY17	2	FY25	2
FY02	1	FY10	1	FY18	2	FY26	2
FY03	1	FY11	2	FY19	2	FY27	2
FY04	1	FY12	2	FY20	2	FY28	2
FY05	1	FY13	2	FY21	2		

Source: Table prepared by CRS based on U.S. Navy data.

Multiyear Contracting

With the exception of the Virginia-class boat that was procured in FY2003, all Virginia-class boats procured from FY1998 through FY2023 were procured under multiyear contracting, meaning either a block buy contract (for the boats procured in FY1998-FY2002) or multiyear procurement (MYP) contracts (for the boats procured from FY2004 through FY2003).¹⁹

¹⁹ The first four Virginia-class boats, known as the Block I boats, were procured under an FY1998-FY2002 block buy contract. This was the first instance of block buy contracting—the mechanism of a block buy contract was essentially created for procuring the first four Virginia-class boats. The Virginia-class boat procured in FY2003 fell between the FY1998-FY2002 block buy contract and the subsequent FY2004-FY2008 MYP contract, and was contracted for separately. The next five Virginia-class boats, known as the Block II boats, were procured under an FY2004-FY2008 MYP contract. The next eight Virginia-class boats, known as the Block III boats, were procured under an FY2009-FY2013 MYP contract. The next 10 Virginia-class boats, known as the Block IV boats, were procured under an FY2014-FY2018 MYP contract. The next 10 Virginia-class boats, known as the Block V boats, were procured under an FY2019-FY2023 MYP contract. For more on MYP and block buy contracting, see CRS Report R41909, *Multiyear Procurement (MYP) and Block Buy Contracting in Defense Acquisition: Background and Issues for Congress*, by Ronald O’Rourke.

The Navy wants the next Virginia-class MYP contract to begin not in FY2024, but in FY2025. As part of its FY2024 budget submission, the Navy has requested authority for a Virginia-class MYP contract that would begin in FY2025.²⁰ The two boats requested for procurement for FY2024 are to be added as non-MYP options to the FY2019-FY2023 Virginia MYP contract. The FY2019-FY2023 MYP contract, in other words, is to be used as a contractual vehicle for procuring the two boats requested for procurement in FY2024, but those two boats would be executed as non-MYP boats, without the special MYP procurement authorities (and resultant cost reductions) that were applied to the other boats procured under the FY2019-FY2023 MYP contract. The Navy states that treating the two boats requested for procurement in FY2024 in this manner would put the next Virginia-class MYP contract—the one that is to cover boats procured in FY2025-FY2029—into better schedule alignment with contracts for procuring Columbia-class ballistic missile submarines, which would maximize efficiency and supplier-firm stability in those years for both the Virginia- and Columbia-class programs.²¹

Joint Production Arrangement

Virginia-class boats are built jointly by GD/EB—the program’s prime contractor—and HII/NNS. The arrangement for jointly building Virginia-class boats was proposed to Congress by GD/EB, HII/NNS, and the Navy, and agreed to by Congress in 1997, as part of Congress’s action on the Navy’s budget for FY1998, the year that the first Virginia-class boat was procured.²² A primary aim of the arrangement was to minimize the cost of building Virginia-class boats at a relatively low annual rate in two shipyards (rather than entirely in a single shipyard) while preserving key submarine-construction skills at both shipyards.

Under the arrangement, GD/EB builds certain parts of each boat, HII/NNS builds certain other parts of each boat, and the yards have taken turns building the reactor compartments and performing final assembly of the boats. The arrangement has resulted in a roughly 50-50 division of Virginia-class profits between the two yards and preserves both yards’ ability to build submarine reactor compartments (a key capability for a submarine-construction yard) and perform submarine final-assembly work.²³

²⁰ The Navy typically requests authority for an MYP contract for the Virginia-class program one year in advance of the proposed start of the MYP contract. The Navy states that “if the MYP [proposed to begin in FY2025] is not approved in FY 2024, the Navy would lose EOQ savings across the procurement and the long-term shipbuilder and vendor base stability achieved with an MYP authority. If an MYP is not authorized for the next Block of VCS submarines, the Navy may have to enter a single ship procurement contract for FY 2025 ships forcing industry to assume greater risk and raise prices.” (Source: “Twelfth Package of Legislative Proposals Sent to Congress for Inclusion in the National Defense Authorization Act for Fiscal Year 2024 – Individual Proposals (Sent to Congress on May 18, 2023),” posted at <https://ogc.osd.mil/OGC-Offices/Office-of-Legislative-Counsel/DoD-Legislative-Proposals-2024/>.) See also Nick Wilson, “Citing Essential Cost Savings, DOD Seeks Multiyear Authority for Block VI Virginia Submarines,” *Inside Defense*, May 19, 2023.

²¹ Source: Navy briefing on Virginia-class program for CRS and CBO, April 28, 2023.

²² See Section 121 of the FY1998 National Defense Authorization Act (H.R. 1119/P.L. 105-85 of November 18, 1997).

²³ The joint production arrangement is a departure from prior U.S. submarine construction practices, under which complete submarines were built in individual yards. The joint production arrangement is the product of a debate over the Virginia-class acquisition strategy within Congress, and between Congress and DOD, that occurred in 1995-1997 (i.e., during the markup of the FY1996-FY1998 defense budgets). The goal of the arrangement is to keep both GD/EB and HII/NNS involved in building nuclear-powered submarines, and thereby maintain two U.S. shipyards capable of building nuclear-powered submarines, while minimizing the cost penalties of using two yards rather than one to build a submarine design that is being procured at a relatively low annual rate. The joint production agreement cannot be changed without the agreement of both GD/EB and HII/NNS.

Integrated Enterprise Plan (IEP)

Under a plan it calls the Integrated Enterprise Plan (IEP),²⁴ the Navy plans to build Columbia-class ballistic missile submarines jointly at GD/EB and HII/NNS, with most of the work going to GD/EB. As part of this plan, the Navy plans to adjust the division of work on the Virginia-class attack submarine program so that HII/NNS would receive a larger share of the final-assembly work for that program than it has received in the past.²⁵

Virginia Payload Module (VPM)

The Navy plans to build most Virginia-class boats procured in FY2019 and subsequent years with the Virginia Payload Module (VPM), an additional, 84-foot-long, mid-body section equipped with four large-diameter, vertical launch tubes for storing and launching additional Tomahawk missiles or other payloads. The VPM's vertical launch tubes are to be used to store and fire additional Tomahawk cruise missiles or other payloads, including payloads with diameters larger than the 21-inch diameter of a torpedo or Tomahawk missile.²⁶ The four additional launch tubes in the VPM could carry a total of 28 additional Tomahawk cruise missiles (seven per tube),²⁷

²⁴ The IEP was previously called the Submarine Unified Build Strategy, or SUBS.

²⁵ Key elements of IEP include the following:

- GD/EB is to be the prime contractor for designing and building Columbia-class boats;
- HII/NNS is to be a subcontractor for designing and building Columbia-class boats;
- GD/EB is to build certain parts of each Columbia-class boat—parts that are more or less analogous to the parts that GD/EB builds for each Virginia-class attack submarine;
- HII/NNS is to build certain other parts of each Columbia-class boat—parts that are more or less analogous to the parts that HII/NNS builds for each Virginia-class attack submarine;
- GD/EB is to perform the final assembly on all 12 Columbia-class boats;
- as a result of the three previous points, the Navy estimates that GD/EB would receive an estimated 77%-78% of the shipyard work building Columbia-class boats, and HII/NNS would receive 22%-23%;
- GD/EB is to continue as prime contractor for the Virginia-class program, but to help balance out projected submarine-construction workloads at GD/EB and HII/NNS, the division of work between the two yards for building Virginia-class boats is to be adjusted so that HII/NNS would perform the final assembly on a greater number of Virginia-class boats than it would have under a continuation of the current Virginia-class division of work (in which final assemblies are divided more or less evenly between the two shipyards); as a consequence, HII/NNS would receive a greater share of the total work in building Virginia-class boats than it would have under a continuation of the current division of work.

which would increase the total number of torpedo-sized weapons (such as Tomahawks) carried by the Virginia-class design from about 37 to about 65—an increase of about 76%.²⁸

Building Virginia-class boats with the VPM is intended to compensate for a sharp loss in submarine force weapon-carrying capacity that will occur with the retirement in FY2026-FY2028 of the Navy's four Ohio-class SSGNs. Each SSGN is equipped with 24 large-diameter vertical launch tubes, of which 22 can be used to carry up to seven Tomahawks each, for a maximum of 154 vertically launched Tomahawks per boat, or 616 vertically launched Tomahawks for the four boats. Twenty-two Virginia-class boats built with VPMs could carry 616 Tomahawks in their VPMs.

Acoustic and Other Improvements

The Virginia-class design has been updated multiple times since FY1998. In addition to the VPM, the Navy is introducing acoustic and other improvements to the Virginia-class design that are intended to help maintain the design's superiority over Russian and Chinese submarines.²⁹

Schedule and Cost Performance

The Virginia-class program experienced cost growth in its early years that was due in part to annual procurement rates that were lower than initially envisaged and challenges in restarting submarine production at HII/NNS.³⁰ The lead ship in the program, however, was delivered within four months of the target date that had been established about a decade earlier, and subsequent boats in the program were delivered largely on cost and ahead of schedule.³¹ The Virginia (SSN-774) class program received a David Packard Excellence in Acquisition Award from DOD in 2008.

Beginning in 2019, it was reported that GD/EB, HII/NNS, and their supplier firms were experiencing challenges in meeting scheduled delivery times as the Virginia-class program was transitioning from production of two "regular" Virginia-class boats per year to two VPM-equipped boats per year. Delivery delays have continued since then, and cost growth has emerged

²⁸ A Virginia-class SSN can carry about 25 torpedoes in its four horizontal torpedo tubes and associated torpedo room, and an additional 12 Tomahawk cruise missiles (which are torpedo-sized) in its bow-mounted vertical launch tubes, for a total of about 37 torpedo-sized weapons. Another 28 Tomahawks in four mid-body vertical tubes would increase that total by about 76%.

²⁹ For press reports discussing these improvements, see Kris Osborn, "The Navy Wants to Turn Its Nuclear Attack Submarines Into 'Spy' Ships," *National Interest*, May 28, 2018; Kris Osborn, "Navy Launches Most High-Tech & Stealthy Attack Sub Ever," *Scout Warrior*, November 18, 2017; Megan Eckstein, "Navy Considering Mid-Block Virginia-Class Upgrades, SSGN Construction in Late 2030s," *USNI News*, November 2, 2017; Zachary Cohen, "US Launches 'Most Advanced' Stealth Sub Amid Undersea Rivalry," *CNN*, October 26, 2017; Franz-Stefan Gady, "US Navy Christens Most Advanced Attack Sub Ever," *The Diplomat*, October 17, 2017; Douglas Ernst, "Navy Christens Its 'Most Advanced' Attack Submarine Ever," *Washington Times*, October 16, 2017; Dave Majumdar, "Stealth and Armed to the Teeth: US Navy's Big Plan for Submarine Dominance," *National Interest*, July 9, 2016; Kris Osborn, "'Acoustic Superiority': US Navy's Secret Submarine Plan to Dominate the Seas," *National Interest*, June 20, 2016; Dave Majumdar, "This Is How the U.S. Navy's Submarine Force Dominates the World's Oceans," *National Interest*, May 17, 2016; Megan Eckstein, "Submarines To Become Stealthier Through Acoustic Superiority Upgrades, Operational Concepts," *USNI News*, March 1, 2016.

³⁰ See Statement of Ronald O'Rourke, Specialist in National Defense, Congressional Research Service, before the House Armed Services Committee Subcommittee on Seapower and Expeditionary Forces Hearing on Submarine Force Structure and Acquisition Policy, March 8, 2007, Table 10 on pp. 14-15.

³¹ For discussions of recent exceptions, see Christopher P. Cavas, "US Navy Submarine Program Loses Some of Its Shine," *Defense News*, March 13, 2017; David B. Larter, "Virginia-Class Attack Sub Delivers late As US Navy Aims to Get Program Back on Course," *Defense News*, June 26, 2018.

as an additional issue. This issue is discussed in more detail in the “Issues for Congress” section of this report.

December 2021 Determinations Pursuant to Defense Production Act (DPA)

On December 21, 2021, President Biden signed three determinations permitting the use of the Defense Production Act (DPA) to strengthen the U.S. submarine industrial base for the purpose of increasing production of Virginia-class submarines. For more on these determinations, see **Appendix D**.

FY2024 Funding Request

Virginia-Class Procurement Funding Requested in FY2024 Budget Submission

The Navy’s proposed budget requests the procurement of the 39th and 40th Virginia-class boats. The Navy’s FY2024 budget submission states that one of the two boats is to be built to a special configuration referred to as the “Modified VIRGINIA Class Subsea and Seabed Warfare (Mod VA SSW)” configuration,³² suggesting a configuration that includes a capability for conducting seabed warfare missions.³³

The two boats requested for procurement in FY2024 have an estimated combined procurement cost of \$9,427.6 million (i.e., about \$9.4 billion), including \$5,356.9 million for the Mod VA SSW boat and \$4,070.7 million for the other boat. The two boats have received a combined total of \$2,297.7 million in prior-year advance procurement (AP) funding, and the Navy’s proposed FY2024 budget requests the remaining \$7,130.0 million needed to complete their estimated combined procurement cost. The Navy’s proposed FY2024 budget also requests \$1,855.5 million in AP funding for Virginia-class boats to be procured in future fiscal years; \$1,360.0 million in Economic Order Quantity (EOQ) funding, which is an additional kind of AP funding that can occur under an MYP contract; and \$168.2 million in cost-to-complete (CTC) funding to cover cost growth on Virginia-class boats procured in prior years, bringing the total amount of procurement, AP, EOQ, and CTC funding requested for FY2024 to \$10,513.7 million (i.e., about \$10.5 billion).

Supplemental Funding for Submarine Industrial Base Requested on October 20, 2023

In addition to the above requested funds, on October 20, 2023, the Administration submitted a request for FY2024 emergency supplemental funding for national security priorities that includes, among other things, a total of \$3,393.2 million (i.e., about \$3.4 billion) in funding for the

³² *Department of Defense, Fiscal Year (FY) 2024 Budget Estimates, Navy Justification Book Volume 1 of 1, Shipbuilding and Conversion, Navy, March 2023, p. 113.*

³³ In a transcript published on September 27, 2022, of a podcast on subsea and seabed warfare recorded September 26, 2022, a GD/EB official states “Subsea and Seabed warfare (SSW) is a new capability targeted for a single, late-block-V Virginia-class submarine. While we can’t get into the details, we can say it is a complex, fast-moving program with strong Navy and congressional support. We’re now well into the arrangement phase of the design, which is a critical phase of the program when we lock down major decisions on systems and components and the configuration of spaces.” Another EB official states that “prior Virginia insertions [i.e. insertions of new elements into the Virginia-class design], like the Virginia Payload Module (VPM) compared to SSW, had about half as many arrangements and more time to sell them all.” (Sydney Davies, “K. Graney Team Spotlight Podcast: Subsea and Seabed Warfare,” EB Landing, September 27, 2022.)

submarine industrial base to support construction of new submarines and maintenance of existing submarines, as follows:

- \$557.758 million in the Operation and Maintenance, Navy (OMN) appropriation account for improvements at the four government-operated naval shipyards (NSYs) that maintain the Navy's nuclear-powered ships, including the Navy's submarines;
- \$2,055.0 million in the Shipbuilding and Conversion, Navy (SCN) appropriation account (i.e., the Navy's shipbuilding account) to increase production rates and submarine availability through initiatives in supplier development, shipbuilder and supplier infrastructure, workforce development, technology advancements, and strategic sourcing;
- \$393.57 million in the Other Procurement, Navy (OPN) appropriation account to increase production rates and submarine availability through initiatives in supplier development, shipbuilder and supplier infrastructure, workforce development, technology advancements, and strategic sourcing;
- \$7.0 million in the Research, Development, Test and Evaluation, Navy (RDTEEN) appropriation account to increase production rates and submarine availability through initiatives in supplier development, shipbuilder and supplier infrastructure, workforce development, technology advancements, and strategic sourcing;
- \$281.914 million in the Military Construction, Navy and Marine Corps appropriation account to support infrastructure work at the NSYs to improve the ability to maintain the readiness of the fleet; and
- \$98.0 million in the National Nuclear Security Administration (NNSA) of the Department of Energy (DOE) for Naval Reactors (i.e., the Naval Nuclear Propulsion Program) to support hiring and infrastructure expansion at the Government-Owned, Contractor-Operated Naval Nuclear Laboratory sites in order to meet growing mission demands to provide the trilateral security partnership between Australia, United Kingdom, and United States (i.e., AUKUS) with nuclear propulsion plants.³⁴

AUKUS Proposed Pillar 1 Pathway for Selling Virginia-Class SSNs and Transferring U.S. Submarine and Propulsion Technology to Australia

Proposal Is Referred to as Pillar 1 of AUKUS

In September 2021, the U.S., UK, and Australian governments announced a significant new security partnership called AUKUS (pronounced *AW-kus*, rhyming with *caucus*), with the acronym referring to Australia, the UK, and the United States.³⁵ The proposed first major

³⁴ Source: Attachment 4: Submarine Industrial Base (pages 58-63) to letter dated October 20, 2023, from Shalanda D. Young, Office of Management and Budget, to The Honorable Patrick McHenry, Speaker Pro Tempore of the House of Representatives, accessed October 23, 2023, at <https://www.whitehouse.gov/wp-content/uploads/2023/10/Letter-regarding-critical-national-security-funding-needs-for-FY-2024.pdf>.

³⁵ For more on the AUKUS agreement, see CRS In Focus IF12113, *AUKUS and Indo-Pacific Security*, by Derek E. Mix and Bruce Vaughn; CRS Report R47599, *AUKUS Pillar 2: Background and Issues for Congress*, by Patrick (continued...)

initiative under AUKUS, referred to as Pillar 1, would be a project to rotationally deploy up to five U.S. and UK SSNs out of a port in Western Australia, and more significantly, for Australia, with U.S. and UK assistance, to acquire, operate, and maintain its own force of eight conventionally armed SSNs, including three to five Virginia-class SSNs that would be sold to Australia. Today only six countries—the United States, the UK, France, Russia, China, and India—operate nuclear-powered submarines. The United States since 1958 has provided assistance to the UK’s nuclear-powered submarine program.³⁶ Under the AUKUS Pillar 1 initiative, Australia would become the second country to receive U.S. assistance in this area.

Key Elements of Proposed Pillar 1 Pathway

Key elements of the proposed Pillar 1 pathway include the following:³⁷

- **Embedding of Australian personnel.** Beginning in 2023, Australian military and civilian personnel would embed with the U.S. and UK navies, and in the U.S. and UK submarine industrial bases, to accelerate the training of Australian personnel. The United States would increase SSN port visits to Australia beginning in 2023, with Australian sailors joining U.S. crews for training and development; the UK would increase visits to Australia beginning in 2026.
- **Rotational deployments of U.S. and UK SSNs from Australia.** As early as 2027, the United States and UK would begin forward rotations of SSNs out of HMAS Stirling, an Australian naval base near Perth, in Western Australia, to accelerate the development of Australian naval personnel, workforce, infrastructure and regulatory system. Eventually, one UK SSN and up to four Virginia-class SSNs would be rotationally deployed out of HMAS Stirling under the arrangement, which would be called Submarine Rotational Force-West (SRF-West).
- **Sale of three to five Virginia-class boats to Australia.** The United States would sell Australia three Virginia-class submarines, with the potential to sell up to two more if needed. The first two boats, which would be sold in FY2032 and FY2035, would be existing boats with 18 to 27 years each of remaining expected service life. The third boat, which would be sold in FY2038, would be a new boat taken directly from the U.S. production line, and thus have a full 33-year expected service life. In combination, the sale of these three boats would transfer

Parrish and Luke A. Nicastro; CRS In Focus IF11999, *AUKUS Nuclear Cooperation*, by Paul K. Kerr and Mary Beth D. Nikitin; and CRS In Focus IF12483, *U.S. Arms Transfer Restrictions and AUKUS Cooperation*, by Paul K. Kerr and Ilana Krill.

³⁶ For additional discussion of U.S. assistance to the UK’s nuclear-powered submarine program, see CRS Report R41129, *Navy Columbia (SSBN-826) Class Ballistic Missile Submarine Program: Background and Issues for Congress*, by Ronald O’Rourke.

³⁷ Sources: White House, “Joint Leaders Statement on AUKUS,” March 13, 2023; Commonwealth of Australia, *The AUKUS Nuclear-Powered Submarine Pathway, A Partnership for the Future*, undated, released ca. March 13, 2023, 57 pp.; U.S. Navy, *Report to Congress on the Annual Long-Range Plan for Construction of Naval Vessels for Fiscal Year 2024*, March 2023, p. 4, 15 (table note 3); Megan Eckstein, “Here’s When the US Navy Plans to Sell Subs to Australia under AUKUS,” *Defense News*, November 16, 2023; Rich Abott, “Sub Boss Outlines Schedule Of Virginia-Sub Sales To Australia Under AUKUS,” *Defense Daily*, November 9, 2023; Mallory Shelbourne, “Australia Will Announce AUKUS Nuclear Attack Boat Build Partner Next Year,” *USNI News*, November 9, 2023; Justin Katz, “US Navy Sub Boss Reveals New Details on AUKUS Virginia Class Sub Sales to Australia,” *Breaking Defense*, November 8, 2023; John Hunter Farrell, “Australia To Get One New Build Virginia Class Submarine, Two From U.S. Navy,” *The Drive*, June 8, 2023, which reports remarks made by Australian government officials in testimony at a May 2023 Australian parliamentary hearing.

- more than 70 boat-years of SSN capability from the U.S. Navy to Australia's navy. The U.S. Navy anticipates building additional Virginia-class SSNs in the 2030s as replacements for submarines sold to Australia.
- **UK and Australia construction of AUKUS SSNs incorporating U.S. technology.** The UK and Australia would design and build a new class of AUKUS SSNs for use in the UK and Australian navies that would incorporate U.S. submarine and naval nuclear propulsion technology. The boats would be built in the UK and Australia, with the first boat delivered to the UK navy in the late 2030s and the first boat built in Australia delivered to the Australian navy in the early 2040s. If the Australian construction effort encounters delays, a fourth and perhaps fifth Virginia-class boat would be sold to permit Australia to continue the buildup of its SSN force. Australia by the mid-2050s would operate a force of eight SSNs, including three to five Virginia-class boats and five to three AUKUS SSNs.
 - **Australian investments in U.S. and UK submarine industrial bases.** Australia would invest at least \$3 billion in its industrial base to establish its own capacity for building and maintaining SSNs. In addition to that \$3 billion, and for the purpose of supporting implementation of the proposed Pillar 1 pathway, Australia has allocated in its budget model another \$3 billion for an Australian contribution to the U.S. submarine industrial base, as well as third sum of money (not yet determined as of October 2023) for an Australian contribution to the UK submarine industrial base.³⁸ Although Australia's budget model includes a figure of \$3 billion for Australia's contribution the U.S. submarine industrial base, the precise size and timing of Australia's contribution to the U.S. submarine industrial base is subject to U.S.-Australian consultations.

Previous Countries That Requested but Did Not Receive U.S. Naval Nuclear Propulsion Technology

Overview

U.S. submarine technology and naval nuclear propulsion technology, reflecting decades of cumulative U.S. Navy research, development, design, construction, and operational experience, are generally considered crown jewels of U.S. military technology and consequently are highly protected. As noted earlier, the technical (including acoustic) superiority of U.S. Navy nuclear-powered submarines is generally considered a foundation of U.S. superiority in undersea warfare, which in turn underpins a U.S. ability to leverage the world's oceans as a medium of operations and maneuver, deny that to others, and thereby generate a huge asymmetric strategic advantage for the United States.

Given both its high degree of importance to overall U.S. national security strategy and U.S. technical superiority in the field, U.S. naval nuclear propulsion technology to date has been shared with only one other country—the UK, through an arrangement begun in 1958 reflecting the U.S.-UK special relationship and U.S.-UK cooperation on nuclear-related matters dating back to the Manhattan project in World War II.

³⁸ Parliament of Australia, Foreign Affairs, Defence, and Trade Legislation Committee, October 25, 2023, transcript of committee meeting, accessed December 13, 2023, at https://www.aph.gov.au/Parliamentary_Business/Hansard/Hansard_Display?bid=committees/estimate/27450/&sid=0000.

As detailed below, during the Cold War, when the United States and its allies were engaged in an extended, high-stakes, and costly strategic competition against the Soviet Union and Warsaw Pact allies, the United States reportedly turned down requests from four U.S. treaty allies other than the UK—France, Italy, the Netherlands, and Japan—to share U.S. naval nuclear propulsion technology. A fifth U.S. treaty ally—Canada—also requested but did not receive this technology. Canada canceled its SSN project before the United States acted fully on Canada’s request. A sixth country, Pakistan, also requested but did not receive the technology.

Detailed Discussion

In a November 18, 1987, presentation at a conference in Ottawa, Canada, U.S. Navy Captain Robert F. Hofford, the U.S. naval attaché in Ottawa—who stated that he was expressing his own views, which did not necessarily reflect those of the U.S. government—stated that

Canada is not the only country that has requested this particular advantage from the U.S. As a matter of fact, Canada stands at the end of a line of about six different nations [other than the UK] that have requested exactly the same support from the U.S. for [a] nuclear submarine program. In fact we have turned them all down up to this point, so Canada is in a unique position of being the first country other than the British to be allowed or to even start a technology information flow that will allow the country to pursue its lines toward a nuclear program.³⁹

Regarding France, Italy, and the Netherlands, a November 5, 1987, letter from Representative Melvin Price to Secretary of Defense Caspar W. Weinberger and Secretary of Energy John S. Herrington, the full text of which is reprinted in **Appendix E**, states in part

It is important to appreciate that there is nothing new about an ally wanting our naval nuclear propulsion technology—or about the consistently strong U.S. policy against its releases. Over the years, we have turned down requests from a number of countries, including France, Italy, and the Netherlands.

Regarding France, a 1989 journal article on assistance that the United States provided to France on the design of French nuclear warheads stated

One area in which the French requested but did not receive help was in antisubmarine-warfare (ASW) technology and, in particular, in silencing their own ballistic missile submarines to make them less easily tracked by Soviet hunter-killers. The U.S. Navy adamantly opposed any such assistance. Behind the navy’s position was the extreme sensitivity of its own counter-ASW regime. “The security of our Poseidon-Trident force was so important that we were not going to share with anybody else the methods we used to preserve it,” a senior civilian told me. Another said, “This is a jewel the navy will give to no one.”⁴⁰

Regarding Japan, Admiral Kinnaird R. McKee, then-Director of the U.S. Naval Nuclear Propulsion Program (aka Naval Reactors), testified in March 1988:

Frankly, I think Japan is smart enough, if they really want to, to develop a phase-to-phase [sic: phased-array] radar.⁴¹ They have also asked us for help in nuclear submarines. We

³⁹ Transcript of presentation.

⁴⁰ Richard H. Ullman, “The Covert French Connection,” *Foreign Policy*, Summer 1989 (No. 75): 16-17, accessed at <https://www.jstor.org/stable/1148862>.

⁴¹ Admiral McKee’s testimony at this point is referring to a proposal at the time, which he was asked to comment on, to sell to Japan the U.S. Navy’s surface ship Aegis weapon system, which included the SPY-1 phased-array radar. The system was eventually sold to Japan and is now used on eight Japanese destroyers. The system was also sold to South Korea, Australia, Spain, and Norway for use on ships in the navies of those countries. For more on the Aegis system, (continued...)

say[.] “If you want to get into the nuclear submarine business, go ahead and do it. You don’t need our help.”⁴²

Regarding Pakistan, Admiral McKee testified in March 1988: “We have a letter from the Pakistanis who want one [i.e., a U.S. nuclear-powered submarine] because the Soviets gave [sic: leased] one [i.e., a Soviet nuclear-powered submarine] to India.”⁴³

Admiral McKee’s testimony about Japan and Pakistan was given in connection with a project that Canada initiated in 1987 to acquire a force of 10 to 12 UK- or French-made SSNs. A choice by Canada to select the UK SSN design (the Trafalgar-class design) would have involved the transfer to Canada of naval nuclear propulsion technology in the Trafalgar-class design that was derived from the naval nuclear propulsion technology that the United States provided to the UK beginning in 1958, which would have raised a question of U.S. approval for a potential sale of UK-made SSNs to Canada. The issue was discussed in a 1988 CRS report.⁴⁴ Canada canceled its SSN project in 1989, mooted the potential question of whether to share with Canada naval nuclear propulsion technology in the Trafalgar-class design that was derived from the naval nuclear propulsion technology that the United States provided to the UK beginning in 1958. For 1987-1988 letters and statements from Members of Congress regarding the Canadian SSN project, see **Appendix E**.

Impact of Selling Virginia-Class Boats to Australia on Size of U.S. SSN Force

Overview of CBO and CRS Estimates

Selling three to five Virginia-class boats to Australia would reduce the size of the U.S. Navy’s SSN force from FY2032 (when the first boat would be sold) until (as estimated by CRS and CBO) sometime between 2040 and 2049. As discussed further in the detailed discussion below

- Based on Navy testimony and potential construction times for SSNs, CRS notionally estimates that if the Navy were able to increase SSN production rates along the lines that the Navy has described, then the third replacement boat might

India leased a nuclear-powered submarine with the hull number K-43 from the Soviet Union in September 1987. The boat served in India’s navy from 1988 to 1991, and the lease is viewed as helping India with its effort to design and build its own nuclear-powered submarines. (See for example “Soviet submarine K-43,” Wikipedia, updated March 19, 2023, accessed October 30, 2023.) India leased a second nuclear-powered submarine from Russia in 2012 (the boat served in India’s Navy from 2012 to 2021), and in 2019 signed a lease with Russia for a third nuclear-powered submarine that reportedly is to join India’s navy by 2025. (See, for example, Vivek Raghuvanshi, “India Signs \$3 Billion Contract with Russia for Lease of a Nuclear Submarine,” *Defense News*, March 8, 2019; “List of submarines of the Indian Navy,” Wikipedia, updated October 21, 2023, accessed October 30, 2023.)

⁴⁴ For a discussion of this issue, see CRS Issue Brief IB88083, *Canadian Nuclear-Powered Attack Submarine Program: Issues for Congress*, updated April 24, 1989 (archived), by Ronald O’Rourke. This report is available to congressional clients directly from the author.

- enter service around 2043, and the fourth and fifth replacement boats, if needed, might enter service around 2046 and 2049, respectively.
- The Congressional Budget Office (CBO), based on a detailed SSN procurement projection CBO developed, estimates that if the Navy were able to increase SSN production rates along the lines that the Navy has described, then the third replacement boat would enter service in 2040 and the fourth and fifth replacement boats, if needed, would enter service in 2042 and 2049, respectively.
 - In other words, CRS and CBO estimate that if three Virginia-class boats are sold to Australia, the reduction in the size of the U.S. SSN force would last until 2040 (CBO) or 2043 (CRS), that if four Virginia-class boats are sold to Australia, the reduction would last until 2042 (CBO) or 2046 (CRS), and that if five Virginia-class boats are sold to Australia, the reduction would last until 2049 (both CBO and CRS).
 - These estimated dates are dependent on the ability of the Navy and the U.S. submarine construction industrial base to increase the Virginia-class production rate to 2.0 boats per year by 2028 and to 2.33 boat per year sometime after that. If the Virginia-class production rate falls short of these goals, then the reduction in the size of the SSN force could last longer than the dates cited above.

Detailed Discussion

The Navy states in its FY2024 30-year shipbuilding plan, “the Navy anticipates building additional Virginia class SSNs in the 2030s as replacements for submarines sold to Australia.” Strictly construed, building additional SSNs as replacements for three to five Virginia-class boats sold to Australia would involve building three to five SSNs that would be in addition to those that were already envisaged as being built under the Navy 30-year shipbuilding plan that preceded the announcement of the AUKUS agreement in September 2021. The Navy 30-year shipbuilding plan with 30-year ship procurement profiles that preceded the announcement of the AUKUS agreement in September 2021 is the Navy FY2020 30-year (FY2020-FY2049) shipbuilding plan, which was submitted in March 2019. This 30-year plan includes the procurement of SSNs at a steady rate of two boats per year from FY2021 through FY2049.⁴⁵

On this basis, it might be argued that building replacement SSNs for three to five Virginia-class boats sold to Australia would involve building SSNs at a rate of something more than two boats per year. At an October 25, 2023, hearing on the submarine industrial base and its ability to support the AUKUS framework before the Seapower and Projection Forces Subcommittee of the House Armed Services Committee, the Navy testified that supporting both U.S. Navy and AUKUS needs would require the increasing the Virginia-class construction rate from 2.0 boats per year to 2.33 boats per year.⁴⁶ Compared to a previously planned procurement rate of 2.0 boats per year, a procurement rate of 2.33 boats per year would equate to one additional boat every three years.

If the first replacement boat were procured in FY2030 and an additional replacement boat were procured every three years thereafter (i.e., in FY2033, FY2036, and so on if needed), and if each boat were to take seven years to build (which is a construction time that might be reasonable

⁴⁵ U.S. Navy, *Report to Congress on the Annual Long-Range Plan for Construction of Naval Vessels for Fiscal Year 2020*, March 2019, Table A2-1 on page 13.

⁴⁶ Joint Statement, Honorable Erik K. Raven, Under Secretary of the Navy, VADM William J. Houston, Commander, Naval Submarine Forces, [and] RDML Jonathan Rucker, Program Executive Officer, Attack Submarines, before the House Committee on Armed Services Subcommittee on Seapower and Projection Forces, October 25, 2023, p. 5.

under projected construction conditions), then CRS notionally estimates that the third replacement boat might enter service around 2043, and the fourth and fifth replacement boats, if needed, might enter service around 2046 and 2049, respectively.

CBO, based on a detailed SSN procurement projection CBO developed under which the first four replacement boats are procured at one- and two-year intervals rather than three-year intervals, estimates that the third replacement boat would enter service in 2040, and the fourth and fifth replacement boats, if needed, would enter service in 2042 and 2049, respectively.⁴⁷

Whether the U.S. submarine construction industrial base would be able to achieve an SSN construction rate of 2.33 boats per year, particularly as it also is building new Columbia-class ballistic missile submarines, is a question that may be considered. As discussed later in this report, although Virginia-class submarines are currently being procured at a rate of two boats per year, the submarine construction industrial base is currently able to build them at a rate of about 1.2 to 1.3 boats per year, resulting in a growing backlog of SSN construction work, and the Navy does not anticipate the Virginia-class construction rate reaching 2.0 boats per year until 2028.

As noted earlier, the supplemental funding for the submarine industrial base requested on October 20, 2023, is intended to help increase the capacity of the submarine industrial base to support both pre-AUKUS U.S. Navy needs and additional submarine-construction needs that would be required for implementing the AUKUS agreement. If the Navy is not able to achieve an SSN construction rate of 2.33 boats per year, then replacement boats for those sold to Australia could enter service with the U.S. Navy later than indicated in the above CRS and CBO estimates, or perhaps not be built at all.

Under the Navy's FY2024 30-year (FY2024-FY2053) shipbuilding plan, the Navy's SSN force—without the sale of any Virginia-class boats to Australia—is projected to include 50 SSNs in FY2035 and either 55, 57, or 60 SSNs in FY2045. The FY2035 figure of 50 SSNs represents a shortfall of about 24% relative to the Navy's SSN force-level goal of 66 boats, while the FY2045 figures of 55, 57, and 60 boats represent shortfalls of about 17%, 14%, and 9%, respectively, relative to the Navy's SSN force-level goal of 66 boats.

Selling three Virginia-class boats to Australia by FY2035, and not replacing them through the construction of additional Virginia-class boats by FY2035, would reduce the projected number of SSNs in FY2035 to 47 boats, which would increase the percentage shortfall in the number of Navy SSNs relative to the Navy's SSN force-level goal in FY2035 from the above-mentioned figure of about 24% to about 29%.

Selling three Virginia-class boats to Australia by FY2045, and not replacing them through the construction of additional Virginia-class boats by FY2045, would reduce the projected number of SSNs in FY2045 to 52, 54, or 57 boats, which would increase the percentage shortfalls in the number of Navy SSNs relative to the Navy's SSN force-level goal in FY2045 from the above-mentioned figures of about 17%, 14%, and 9%, respectively, to about 21%, 18%, and 14%, respectively.

Selling five Virginia-class boats to Australia by FY2045, and not replacing them through the construction of additional Virginia-class boats by FY2045, would reduce the projected number of SSNs in FY2045 to 50, 52, or 55 boats, which would increase the percentage shortfalls in the number of Navy SSNs relative to the Navy's SSN force-level goal in FY2045 from the above-

⁴⁷ Source CBO email to CRS, October 30, 2023. See also Congressional Budget Office, *An Analysis of the Navy's Fiscal Year 2024 Shipbuilding Plan*, October 2023, Box 1 on pp 28-29.

mentioned figures of about 17%, 14%, and 9%, respectively, to about 24%, 21%, and 17%, respectively.

May 2023 DOD Legislative Package with Requested Enabling Legislation

On May 2, 2023, DOD sent to Congress its eighth package of legislative proposals requested for inclusion in the FY2024 National Defense Authorization Act (NDAA). The package included requested measures that would

- provide DOD with the authority to accept payments from the government of Australia for the purpose of improving the U.S. submarine industrial base;
- authorize the transfer of up to two Virginia-class SSNs to the government of Australia in the form of a sale, with the costs of the transfer covered by the government of Australia; and
- provide for the training of the Australian private-sector personnel to support the development of the Australian submarine industrial base under the foreign military sales program pursuant to the Arms Export Control Act (AECA).

For the text of the legislative package, see the “Legislative Activity ” section of this report.

Supplemental Funding for Submarine Industrial Base Requested on October 20, 2023

As noted earlier, on October 20, 2023, the Administration submitted a request for FY2024 emergency supplemental funding for national security priorities that includes, among other things, a total of \$3,393.2 million (i.e., about \$3.4 billion) in funding for the submarine industrial base to support construction of new submarines and maintenance of existing submarines. This funding is intended to help increase the capacity of the submarine industrial base to support both pre-AUKUS U.S. Navy needs and additional submarine-construction needs that would be required for implementing the AUKUS agreement.

October 25, 2023, Hearing on Submarine Industrial Base and AUKUS

On October 25, 2023, the Seapower and Projection Forces Subcommittee of the House Armed Services Committee held a hearing on the submarine industrial base and its ability to support the AUKUS framework. The witnesses—all from DOD and the Navy, and who testified in support of the proposed Pillar 1 pathway and the supplemental funding for the submarine industrial base that was requested on October 20, 2023—were Dr. Mara Karlin, performing the duties of Deputy Under Secretary of Defense for Policy; Erik Raven, Under Secretary of the Navy; Vice Admiral William Houston, Commander, Naval Submarine Forces; and Rear Admiral Jonathan Rucker, Program Executive Officer, Attack Submarines.⁴⁸

Potential Alternative of a U.S.-Australia Division of Labor

A potential alternative to the proposed Pillar 1 pathway would be a U.S.-Australia military division of labor under which U.S. SSNs would perform both U.S. and Australian SSN missions

⁴⁸ The prepared statements of the witnesses are available at <https://docs.house.gov/Committee/Calendar/ByEvent.aspx?EventID=116514>. The CQ transcript of the hearing is available (subscription required) at <https://plus.cq.com/doc/congressionaltranscripts-7864570?3>. A video of the hearing is available at <https://armedservices.house.gov/hearings/spf-hearing-submarine-industrial-base-and-its-ability-support-aukus-framework>.

while Australia invested in military capabilities for performing non-SSN missions for both Australia and the United States. Such a U.S.-Australia military division of labor might be broadly similar to military divisions of labor that exist between the United States and some or all of its NATO or other allies for naval capabilities such as aircraft carriers, SSNs, large surface combatants, and amphibious ships, and for non-naval capabilities such as (to name only some examples) nuclear weapons, space assets, and intelligence, surveillance, and reconnaissance (ISR) capabilities.

Under a U.S.-Australia military division of labor involving SSNs

- the proposed forward rotations of U.S. and UK SSNs to Australia would still be implemented;
- the size of the U.S. SSN force would be expanded by at least three to five boats, and possibly eight boats, above previous plans so as to provide additional U.S. SSNs for performing Australian SSN missions; and
- Australia, instead of using funds to purchase, operate, and maintain its own SSNs, would instead invest those funds in other military capabilities (such as, for example, producing long-range anti-ship missiles and/or purchasing of U.S.-made B-21 long-range bombers),⁴⁹ so as to create an Australian capacity for performing non-SSN military missions for both Australia and the United States.

Variations of this potential alternative include but are not necessarily limited to the following:

- Under one variation of this potential alternative, the proposed sharing of U.S. naval nuclear propulsion technology and U.S. submarine technology, the proposed Australian investments in Australian and U.S. submarine-construction capability, and the other proposed actions for supporting eventual Australian construction of AUKUS SSNs would continue, and Australia would eventually build its own AUKUS SSNs, reducing at that point the need for U.S. SSNs to perform Australian SSN missions.
- Under another variation of this potential alternative, the performance of Australian SSN missions by U.S. SSNs would continue indefinitely, and instead of implementing the technology sharing, making Australian investments in submarine-construction capability, and taking the other actions that would be needed to eventually build AUKUS SSNs, Australia would continue investing in other military capabilities for supporting a continuing U.S.-Australia division of labor. Under this variation, the size of the U.S. SSN force would eventually be expanded above previously planned levels by eight boats (i.e., the planned eventual number of SSNs that Australia had planned to acquire).

Under both variations of this potential alternative, some or all of the U.S. Navy SSNs that would perform Australian SSN missions could be operated out of a port in Australia, in an arrangement perhaps similar to the earlier-described Submarine Rotational Force-West (SRF-West) concept that forms another part of AUKUS Pillar 1, or to the arrangement under which U.S. Navy nuclear-powered ballistic missile submarines (SSBNs) from 1961 to 1991 underwent inter-deployment refits at a forward-located facility in Holy Loch, Scotland.⁵⁰

⁴⁹ For more on the B-21 program, see CRS Report R44463, *Air Force B-21 Raider Long-Range Strike Bomber*, coordinated by John R. Hoehn.

⁵⁰ For a short history of the Holy Loch arrangement, see, Ronald D. Gumbert, “History of Submarine Squadron (continued...)”

Table 3 summarizes certain features of the proposed Pillar 1 pathway and the two above-described variations of the potential alternative of a U.S.-Australia division of labor.

Table 3. Proposed Pillar 1 Pathway and Potential Division of Labor Alternative

	Proposed AUKUS pathway	Potential alternative of U.S.-Australia division of labor	
		One variation	Another variation
Australian SSN missions to be performed in 2030s and beyond by...	Australian Navy SSNs, consisting initially of Virginia-class boats sold to Australia, later augmented by Australian-made AUKUS SSNs	U.S. Navy SSNs, until replaced by Australian-made AUKUS SSNs	U.S. Navy SSNs
Forward rotations of U.S. and UK SSNs to Australia	Yes	Yes	Yes
3 to 5 Virginia-class SSNs sold to Australia	Yes	No	No
AUKUS SSNs built in Australia for Australian use	Yes	Yes	No

Issues for Congress

AUKUS Proposed Pillar 1 Pathway for Selling Virginia-Class SSNs and Transferring U.S. Submarine and Propulsion Technology to Australia

Key questions for Congress in assessing whether to approve, reject, or modify the proposed Pillar 1 pathway include the following:

- Should Congress decide in 2023 whether to approve, reject, or modify the legislation requested to implement the proposed Pillar 1 pathway, as the Administration is requesting, or defer a decision until 2024 or later?
- How do the potential benefits, costs, and risks of the proposed Pillar 1 pathway compare to those of the potential alternative of a U.S.-Australia division of labor?

Each of these two questions is discussed below.

Deciding on Requested Enabling Legislation in 2023 or at a Later Point

Administration Is Requesting Congressional Action in 2023

The Administration is asking Congress to approve the legislation requested to implement the proposed Pillar 1 pathway in 2023 rather than at a later point on the grounds that approving the requested legislation quickly would send a strong signal of U.S. resolve and commitment, and because deferring approval of the legislation to 2024 or beyond would delay the timeline for

Fourteen,” *Submarine Review*, January 1992: 72-77, accessed November 6, 2023, at <https://archive.navalsubleague.org/1992/history-of-submarine-squadron-fourteen>.

implementing the pathway. At an October 25, 2023, hearing on the submarine industrial base and its ability to support the AUKUS framework before the Seapower and Projection Forces Subcommittee of the House Armed Services Committee, the Navy testified

To maintain momentum and programmatic schedules, there are four critical legislative proposals that must be passed as part of the FY 2024 National Defense Authorization Act (NDAA)....

Passage demonstrates the US commitment, sends the right signal to Australia to make proportional contribution into the US SIB, and keeps Pillar One on track.... Passing this legislation now will also allow for the appropriate amount of time to complete what will be an extremely complicated Foreign Military Sales (FMS) case. The FMS case allows Australian personnel to take part in the planning and execution of the major maintenance availability occurring prior to the first planned SSN transfer. Including AU in these efforts allows future AU [Australian] crews better access and understanding of the SSN operation and integrates the maintenance team for observation of the planning and execution of a large maintenance period. Planning for this availability starts within the next two years. Therefore, to support Australian personnel integration into the planning, execution, and re-delivery process, the FMS case requires Congressional authorization this year.

This legislative proposal also amends Section 8680 of Title 10 to allow for the maintenance of US submarines in Australia and the UK and to be carried out by personnel from all AUKUS nations. Modifying Title 10 is critical to establishing Submarine Rotational Force-West (SRF-W) by late 2027 and ultimately Australia's ability to safely and effectively operate SSNs. Not passing this legislation will require the US to alter maintenance work associated with planned SSN port visits in 2025, impacting Australia's ability to build the knowledge, skills and stewardship required to operate SSNs and will likely delay the establishment of SRF-W.

Acceptance of contributions is required this year to authorize the US Department of Defense to receive Australia's proportional contribution for the US SIB starting in 2025....

The training proposal is required to fully develop the Australian submarine industrial base and allow for personnel to be embedded in early calendar year 2024. Without this provision, the number of Australian personnel eligible for training in the US would be well below projected requirements and will negatively impact the establishment of SRF-W.⁵¹

Information Available to Congress in 2023

In assessing whether to approve, reject, or modify the legislation requested to implement the proposed Pillar 1 pathway in 2023, as the Administration is requesting, or defer a decision until 2024 or later, Congress may consider, among other things, whether it has adequate information to support a decision in 2023. Items of information that could be helpful to Congress in assessing the proposed Pillar 1 pathway include but are not necessarily limited to the following:

- **Specific boats that would be sold.** Which Virginia-class boats, specifically, would be sold to Australia? If a total of four or five boats are sold, how many would be existing boats with less than 33 years of remaining expected service life, and how many would be newly built boats?
- **Prices of boats that would be sold.** How much would Australia pay for each boat that it would purchase? Adjusted for their remaining expected service lives,

⁵¹ Joint Statement, Honorable Erik K. Raven, Under Secretary of the Navy, VADM William J. Houston, Commander, Naval Submarine Forces, [and] RDML Jonathan Rucker, Program Executive Officer, Attack Submarines, before the House Committee on Armed Services Subcommittee on Seapower and Projection Forces, October 25, 2023, pp. 8-9.

how would those sale prices compare to the \$4.3-billion procurement cost of a new VPM-equipped Virginia-class boat?

- **The precise amount and timing of Australia’s investment in U.S. submarine industrial base.** How much additional funding, exactly, would Australia provide for the U.S. submarine construction industrial base? When would this funding be provided? Would it be provided in a single payment or a series of payments?
- **Dates for procuring replacement boats.** When would each of the three to five replacement boats for the U.S. Navy be procured, and when would they each enter service?
- **U.S. industrial base capability for building replacement boats.** How able would the U.S. submarine construction base be in the 2030s to build, as replacements for sold Virginia-class boats, three to five new SSNs for the U.S. Navy that would be in addition to the SSNs already envisaged for procurement for U.S. Navy use prior to the announcement of the AUKUS agreement?
- **Operational impact of reduction in U.S. SSN force.** What would be the impact of a three- to five-boat reduction in the size of the U.S. SSN force on the ability of the U.S. SSN force to perform day-to-day and wartime SSN missions of interest to the United States?

At the October 25, 2023, hearing on the submarine industrial base and its ability to support the AUKUS framework before the Seapower and Projection Forces Subcommittee of the House Armed Services Committee, the following exchange occurred:

REPRESENTATIVE MIKE GALLAGHER: Thank you. First, a sort of a clerical issue, my understanding is the Submarine Industrial Base 2025 study is done. I think some of our staff may have been briefed on it, but do we have access to the report or rather can we have access to the report?

DR. MARA KARLIN, PERFORMING THE DUTIES OF DEPUTY UNDER SECRETARY OF DEFENSE FOR POLICY: Indeed, I believe that some briefings have occurred and some additional briefings will occur to—to you and your staff. I think folks are just scheduling those right now.

GALLAGHER: Could we get the actual report though itself?

KARLIN: I believe that they will be briefing you on the—on the actual study and I think they have—their plan is to brief you on the cost estimates from the study and to walk through the substance of it.

GALLAGHER: Um, Wait so—But presumably the study's like instantiated in like a physical document, right? Like could we just get the physical document at some point to read it? And if we're assessing the health of the submarine industrial base, I think that would be like very helpful.

KARLIN: Yeah, I believe—I believe the plan is to sit down with you and your staff and walk through materials related to it and I would note that that did—did inform the numbers that were in—in the [FY2024] supplemental [funding request for the submarine industrial base].

GALLAGHER: Ok, I guess in addition to being walked through the material, could I just have the material to read the material?

KARLIN: I can take that back. I think as of now the plan was to brief you all using materials to be clear.

REPRESENTATIVE TRENT KELLY, CHAIRMAN: If you could—if you could take back that we would like the actual report, I think that’s very helpful.⁵²

An October 12, 2023, letter to President Biden from Senators Roger F. Wicker, Jeanne Shaheen, Dan Sullivan, Richard Blumenthal, Kevin Cramer, and Tim Kaine states

We write to express our strong support for advancing the Australia-United Kingdom-United States (AUKUS) partnership. The collaboration across the U.S. government over the last several months has enabled significant progress in the development of the legal authorities necessary for AUKUS implementation, and we are eager to see those authorities be signed into law this year.

To realize the full potential of AUKUS, the American defense industrial base will require significant resources to improve submarine construction and maintenance rates. The volume of submarine tonnage the industrial base must produce to meet the Navy’s own requirements and fully implement the AUKUS agreement will require historic and sustained investments in the submarine workforce and supplier network. To achieve such capacity, Congress must have a comprehensive understanding of the current status of the submarine industrial base as well as the future resource investments necessary to meet our nation’s requirements.

We understand that a Submarine Industrial Base 2025 (SIB-25) study from the U.S. Navy and the Director of Cost Assessment and Program Evaluation is complete, but that the administration does not plan to share its findings with Congress until the President’s Budget Request for Fiscal Year 2025 is released, sometime early next year. However, understanding the scope of the generational investment required for the SIB’s viability is critical for development of AUKUS-authorizing legislation this year and for robust Congressional oversight as the United States charts the future course of AUKUS. Therefore, we ask the administration to provide the cost estimates contained within the SIB-25 study to Congress no later than October 31, 2023, to inform Congressional consideration of any AUKUS-associated legislation.

It is critical that the administration articulate a detailed plan for instituting necessary enhancements to the submarine industrial base. This is a crucial first step in posturing the United States to effectively address existing security challenges in the Indo-Pacific, and essential for fully realizing the potential of the AUKUS agreement.⁵³

An October 17, 2023, report from the Defence Committee of the House of Commons of the UK Parliament on UK defense and the Indo-Pacific region stated the following regarding the UK’s role in AUKUS (emphasis as in the original)

Witnesses also pointed to the challenges involved in implementing the partnership. For example, Dr [Marcus] Hellyer [Senior Analyst at the Australian Strategic Policy Institute (ASPI)] and Professor [Rory] Medcalf [Head of National Security College, Australian National University] thought it essential that the Government remains realistic and alert to the magnitude of the challenge posed by the timeframes, cost, infrastructure and regulation required to deliver this ambitious programme. Such challenges are likely to be heightened by the lack of clarity over key details of the programme: for example, Baroness Goldie was unable to tell us how many SSN-AUKUS submarines will be built for the UK or with which weapons systems the submarines will be equipped....

⁵² CQ transcript of hearing.

⁵³ Letter dated October 12, 2023, to President Joe Biden from Senators Roger F. Wicker, Jeanne Shaheen, Dan Sullivan, Richard Blumenthal, Kevin Cramer, and Tim Kaine, accessed October 23, 2023, at <https://www.wicker.senate.gov/services/files/17397F99-D39B-4D53-BF10-6A7A6BF6C074>. See also Bryant Harris, “Senators Push Biden to Release Submarine Costs for AUKUS,” *Defense News*, October 17, 2023.

We welcome the announcement of the SSN-AUKUS class submarine, including the increased port visits and the Rotational Force, in maintaining a coherent regional presence. The UK must, however, be realistic and cognisant of the significant hurdles for all AUKUS partners in constructing nuclear-powered submarines. A fundamental challenge is the continuing lack of clarity about how many submarines will ultimately be built, the cost, and the availability of a skilled workforce. We call on the Government to set out in its response to this Report the anticipated timescale for producing a detailed plan on: how much it expects SSN-AUKUS to cost, how it will address the skills shortage, and how many SSN-AUKUS class it will produce. It should also set out any existing plans so far as they exist.⁵⁴

Potential questions for Congress to consider include the following:

- Does Congress have sufficient information in 2023 regarding the specific elements of the proposed Pillar 1 pathway (including elements addressed in the bullet points listed above) to adequately assess the merits of Pillar 1?
- Is the executive branch being adequately forthcoming in providing Congress with such information?
- What might be the potential implications if Congress were to make a decision in 2023 about the proposed Pillar 1 pathway without sufficient information on its specific elements?

Supporters of making a decision in 2023 on whether to approve, reject, or modify the legislation requested to implement the proposed Pillar 1 pathway could argue, as the Navy did in the above-quoted portion of the Navy's testimony at the October 25, 2023, hearing, that approving the requested legislation in 2023 would send a strong signal of U.S. resolve and commitment, and that deferring a decision to 2024 or a later year would send a weaker signal and set back the timeline for implementing the pathway. They could argue that in light of the urgency that some observers view for countering China's improving naval and other military capabilities,⁵⁵ including concerns about the possibility that China might take military action against Taiwan or other countries sometime within the next few years,⁵⁶ any delay in implementing the proposed Pillar 1 pathway could have a significant impact on deterring or responding to potential nearer-term Chinese aggression against Taiwan or other countries.

Supporters of deferring a decision until 2024 or later could argue that if Congress in 2023 does not have adequate information from the executive branch for making a decision (including information on the elements addressed in the bullet points listed earlier), then making a decision in 2023 could be premature, inconsistent with maintaining Congress as a co-equal branch of government, or inconsistent with carrying out Congress's responsibility for conducting effective oversight of executive branch proposals, particularly on matters as important as those involved in the proposed Pillar 1 pathway. Making a decision in 2023 without adequate information, they could argue, could create downstream risks in execution that themselves could set back the

Ordered by the House of Commons to be printed 17 October 2023, pp. 25-26. The second paragraph in the block quote appears again on pages 39-40 as part of the report's conclusions and recommendations section.

⁵⁵ For more on China's naval modernization effort and its overall military capabilities, see CRS Report RL33153, *China Naval Modernization: Implications for U.S. Navy Capabilities—Background and Issues for Congress*, by Ronald O'Rourke, and CRS Report R46808, *China's Military: The People's Liberation Army (PLA)*, by Caitlin Campbell.

⁵⁶ For more on this concern, which is sometimes referred with the terms such as the Davidson window (meaning the period 2021 to 2027) or decade of concern (meaning the decade from 2020 to 2030), see CRS Report RL33153, *China Naval Modernization: Implications for U.S. Navy Capabilities—Background and Issues for Congress*, by Ronald O'Rourke.

implementation timeline. They could argue that in some past instances where the Navy urged Congress to act quickly to approve a new effort, and Congress complied, such as (to cite one example) the Navy's Littoral Combat Ship (LCS) program, downstream execution challenges led to multiple program challenges and the eventual truncation of the program.⁵⁷

Merits of Proposed Pillar 1 Compared to U.S.-Australia Division of Labor

In assessing the potential benefits, costs, and risks of the proposed Pillar 1 pathway compared to those of the potential alternative of a U.S.-Australia division of labor, Congress may consider various issues, including but not limited to the following:

- the analytical basis and business case for the proposed Pillar 1 pathway;
- the potential impact on deterrence and warfighting capability;
- the potential impact on the risk of China, Russia, or some other country gaining access to U.S. submarine or naval nuclear propulsion technology; and
- the risk of an accident involving an Australian-owned SSN that might call into question for third-party observers the safety of all U.S. Navy nuclear-powered ships and thereby affect U.S. public support for operating U.S. Navy nuclear-powered ships and/or the ability of U.S. Navy nuclear-powered ships to make port calls around the world.

Each of these issues is discussed below.

Analytical Basis and Business Case

In terms of the time, funding, personnel, technology, and industrial work that would be involved, implementing the proposed Pillar 1 pathway would be an effort comparable in scale and complexity to a major DOD acquisition program. Major DOD acquisition programs are generally not initiated without first demonstrating that there is a rigorous analytical basis for the program—something that is typically done by conducting a formal study, often called an analysis of alternatives (AOA) or analysis of multiple concepts (AMC), that rigorously compares various potential courses of action so as to identify the one that the analysis shows to be the most cost effective. Performing an AOA, AMC, or equivalent rigorous analysis prior to initiating a program can test the validity of beliefs or presumptions about the cost effectiveness of an envisioned course of action, and sometimes produce unexpected or counter-intuitive results.

Establishing a firm analytical basis for an acquisition program by conducting an AOA, AMC, or equivalent rigorous analysis can help form part of what the Government Accountability Office (GAO) refers to as a sound business case for proceeding with an acquisition program. GAO since at least 2006 has reported and testified multiple times on the risks associated with initiating acquisition programs without a sound business case.⁵⁸

⁵⁷ For further discussion, see pages 20-27 of the May 12, 2017, version of CRS Report RL33741, *Navy Littoral Combat Ship (LCS) Program: Background and Issues for Congress*, by Ronald O'Rourke. Similar discussions can be found in earlier versions of this report.

⁵⁸ A 2006 GAO report, for example, states:

We have frequently reported on the importance of using a solid, executable business case before committing resources to a new product development effort. In the case of DOD, a business case should be based on DOD acquisition policy and lessons learned from leading commercial firms and successful DOD programs. The business case in its simplest form is demonstrated evidence that (1) the warfighter's needs are valid and that they can best be met with the chosen concept, and (2) the

(continued...)

chosen concept can be developed and produced within existing resources—that is, proven technologies, design knowledge, adequate funding, and adequate time to deliver the product when it is needed. A program should not go forward into product development unless a sound business case can be made.

(Government Accountability Office, *Defense Acquisitions[:] Improved Business Case Is Needed for Future Combat System’s Successful Outcome*, GAO-06-367, March 2006, p. 8.)

A 2015 GAO report states:

A business case provides demonstrated evidence that (1) the warfighter need exists and that it can best be met with the chosen concept and (2) the concept can be developed and produced within existing resources—including proven technologies, design knowledge, adequate funding, and adequate time to deliver the product when needed. Establishing a business case calls for a realistic assessment of risks and costs; doing otherwise undermines the intent of the business case and invites failure.

(Government Accountability Office, *Acquisition Reform[:] DOD Should Streamline Its Decision-Making Process for Weapon Systems to Reduce Inefficiencies*, GAO-15-192, footnote 11 on page 9. A similar statement is found in Government Accountability Office, *Defense Acquisitions[:] Joint Action Needed by DOD and Congress to Improve Outcomes*, Testimony Before Committee on Armed Services, House of Representatives, Statement of Paul L. Francis, Managing Director, Acquisition and Sourcing Management, GAO-16-187T, October 27, 2015, highlights page.)

A 2020 GAO report states:

GAO’s previous work has shown that weapon systems without a sound business case are at greater risk for schedule delays, cost growth, and integration issues....

We have previously reported on the importance of establishing a solid, executable business case before committing resources to a new development effort. A business case demonstrates that (1) the warfighter’s needs are valid and that they can best be met with the chosen concept and (2) the chosen concept can be developed and produced within existing resources. In addition to an acquisition strategy, other basic elements of a sound acquisition business case include firm requirements, a plan for attaining mature technologies, and a reliable cost estimate and affordability analysis....

(Government Accountability Office, *Defense Acquisitions[:] Action Is Needed to Provide Clarity and Mitigate Risks of the Air Force’s Planned Advanced Battle Management System*, GAO-20-389, April 2020, highlights page and p. 7.)

In 2021 testimony on DOD acquisition, GAO states:

GAO annually assesses selected DOD weapon programs and their likely outcomes by analyzing: (1) the soundness of a program’s business case—which provides evidence that the warfighter’s needs are valid and the concept can be produced within existing resources—at program start, and (2) the knowledge a program attains at other key points in the acquisition process. For example, the Navy’s Ford-class aircraft carrier program began with a weak business case, including an unrealistic cost estimate based on unproven technologies, resulting in over \$2 billion in cost growth and years of delays to date for the lead ship....

For years, we have reported on the importance of using a solid, executable business case—a justification for a proposed project or undertaking—before committing resources to a new product development effort. An executable business case uses realistic cost and schedule targets to meet the warfighter’s performance and quality expectations by balancing inherent uncertainties in acquisition programs....

While cost and schedule metrics provide decision makers with performance information in hindsight, we have found that assessing a program’s business case at the start of development and attainment of certain product knowledge at key points in the acquisition process can help predict a program’s performance.

(Government Accountability Office, *DOD Acquisition Reform[:] Increased Focus on Knowledge Needed to Achieve Intended Performance and Innovation Outcomes*, Testimony Before the Subcommittee on Readiness and Management Support, Committee on Armed Services, U.S. Senate, Statement of Shelby S. Oakley, Director, Contracting and National Security Acquisitions, GAO-21-511T, April 28, 2021, highlights page and pp. 1-2, 6.)

In the earlier-cited example of the LCS program, the Navy, prior to announcing the start of that program in November 2001, did not perform a rigorous AOA, AMC, or equivalent analysis to show that a ship like the LCS was not simply one way, but rather the best or most promising way, to perform the missions that the Navy was seeking a capability to perform. The Navy in April 2003 testimony acknowledged that it did not conduct such a study until after it had selected the LCS as its preferred solution, raising a question as to whether that study was tainted by the knowledge that the Navy had already selected the LCS as its preferred solution. The absence of a rigorous AOA, AMC, or equivalent analysis performed prior to the announcement of the LCS program could be viewed as a factor that contributed to the program's subsequent controversy and ultimate truncation.⁵⁹

Potential oversight questions for Congress concerning include the following:

- Prior to announcing the proposed Pillar 1 pathway in September 2021, did the United States, either by itself or in conjunction with the UK and Australia, conduct an AOA, AMC, or equivalent rigorous analysis showing that the proposed Pillar 1 pathway was not simply one possible course of action, but rather the most cost-effective course of action (along with the proposed Pillar 2 of AUKUS)⁶⁰ for generating improved deterrence and warfighting capability?
- If such an analysis was not conducted prior to announcing the proposed Pillar 1 pathway in September 2021
 - Why not?
 - What was the basis for selecting the proposed Pillar 1 pathway as the preferred course of action? To what degree did the selection of the proposed Pillar 1 pathway reflect plausible but untested beliefs or presumptions about its cost effectiveness relative to other potential courses of action?
 - How strong is the business case for the proposed Pillar 1 pathway? If the business case is not strong, what implications might that have for the implementation of the pathway over the next 20 or more years?
- If an AOA, AMC, or equivalent analysis *was* conducted prior to announcing the proposed Pillar 1 pathway in September 2021
 - Has the analysis been provided to Congress? If not, why not?
 - What alternative courses of action (such as a U.S.-Australia division of labor on SSNs, or courses of action that do not involve SSNs) did the analysis examine?
 - What were the findings regarding the comparative cost effectiveness of the proposed Pillar 1 pathway and the alternative courses of action?

A November 15, 2023, opinion piece stated

In a different world, where [Australia's Department of] Defence was meeting its core obligations to provide cogent, well-founded advice to support government decision making, we would expect that there had been a proper analysis of alternative ways of

⁵⁹ For further discussion, see pages 20-27 of the May 12, 2017, version of CRS Report RL33741, *Navy Littoral Combat Ship (LCS) Program: Background and Issues for Congress*, by Ronald O'Rourke. Similar discussions can be found in earlier versions of this report.

⁶⁰ The proposed Pillar 2 of AUKUS would involve U.S.-UK-Australian cooperation in developing and deploying certain advanced military technologies. For more on Pillar 2, see CRS Report R47599, *AUKUS Pillar 2: Background and Issues for Congress*, by Patrick Parrish and Luke A. Nicastro.

increasing Australia’s deterrent capabilities and long-range strike against the backdrop of a dangerous region centred on an aggressive China.

But it is almost certain that this did not happen in the lead-up to the AUKUS announcement.

Instead, the same key defence leadership that has self-proclaimed its failures in an analogous chain of advice and decision making [for Australia’s Hunter-class frigate program] was a part of a tiny coterie of people around the then prime minister who were solely focused on “How can Australia acquire nuclear submarines?”

Looking at deterrence and strike through a straw that only lets the answer be a submarine is an oddly blinkered position to take on something that is about an essential element in our national defence.

It also doesn’t let you think clearly about the huge opportunity costs involved in the financial and human capital tied up in the AUKUS subs plan and the consequences these have for the rest of our military power.⁶¹

Deterrence and Warfighting Capability

Regarding the potential impact on deterrence and warfighting capability, potential arguments that might be made by supporters of the proposed Pillar 1 pathway include but are not necessarily limited to the following:

- Selling Virginia-class boats to Australia would substantially enhance deterrence of potential Chinese aggression by sending a strong signal to China of the collective determination of the United States and Australia, along with the UK, to counter China’s military modernization effort. The fact that the United States has never before sold a complete SSN to another country—not even the UK⁶²—would underscore the depth of this determination, and thus the strength of the deterrent signal it would send.
- The deterrent value of selling Virginia-class boats to Australia would be greater than the deterrent value of keeping those SSNs in U.S. Navy service. Compared with the option of keeping the SSNs in U.S. Navy service and waiting for Australia to build its own AUKUS SSNs, selling Virginia-class boats to Australia would substantially accelerate the creation of an Australian force of SSNs and thereby present China much sooner with a second allied decisionmaking center (along with the United States) for SSN operations in the Indo-Pacific. This would enhance deterrence of potential Chinese aggression in the Indo-Pacific by complicating Chinese military planning. In this regard, selling Virginia-class boats to Australia would be broadly comparable to
 - the help that the United States provided to the UK’s nuclear-powered submarine program starting in 1958, which accelerated the creation of the UK’s SSN force, thereby presenting the Soviet Union much sooner with a second allied decisionmaking center (along with the United States) for SSN operations in the European theater, which enhanced deterrence of potential Soviet aggression in Europe by complicating Soviet military planning; and

⁶¹ Michael Shoebridge, “An AUKUS Remix Delivering Greater Military Power Faster: the B-21 Raider,” *Defence Connect*, November 15, 2023. Also posted as Michael Shoebridge, “AUKUS Plan B: Delivering Greater Military Power Faster—The B-21 Raider,” *Real Clear Defense*, November 16, 2023.

⁶² To help the UK build its first SSN, the United States transferred to the UK a U.S. SSN propulsion plant (i.e., the “back half” of a U.S. SSN), but the UK designed and built the forward part (the “front half”) of the boat and married it to the U.S.-supplied propulsion plant.

- the help that the United States, secretly at the time, reportedly provided to France during the Cold War on the design of France’s nuclear warheads, so as to speed up the development and fielding of France’s strategic nuclear deterrent force and thereby present the Soviet Union much sooner with three decisionmaking centers—the United States, the UK, and France—that were armed with effective strategic nuclear deterrent forces.⁶³
- A division of labor arrangement in which U.S. SSNs perform SSN missions for Australia would not generate this multiple-decisionmaking-center form of deterrence.
- Australia’s promised investment in the U.S. submarine industrial base would help accelerate the date by which replacement SSNs, strictly construed, could be built for the U.S. Navy, and thereby minimize the time during which the size of the U.S. SSN force is reduced due to the sale of Virginia-class boats to Australia. Investments that Australia would make in the U.S. and Australian submarine construction industrial bases would increase the capacity of the combined U.S.-Australia submarine construction industrial base at a time when limits on the capacity of the U.S. submarine construction industrial base have become a matter of concern for U.S. policymakers.
- Australia intends to increase its defense budget as needed to be able to finance the purchase, operation, and maintenance of its Virginia-class boats without having to reduce funding for other Australian military capabilities that are needed for deterring or countering potential Chinese aggression. Increases to Australia’s military budget would be sufficient to ensure that selling Virginia-class boats to Australia would have a net positive impact on Australia’s overall military capabilities for deterring potential Chinese aggression.

Potential arguments that might be made by skeptics of the proposed Pillar 1 pathway include but are not necessarily limited to the following:

- The potential benefits, costs, and risks of the proposed Pillar 1 pathway are uncertain in the absence of specific information on items such as the remaining service lives of the Virginia-class boats that would be sold to Australia, the prices of the boats that would be sold, the precise amount and timing of Australia’s investment in the U.S. submarine industrial base,⁶⁴ the dates when each of the three to five replacement boats for the U.S. Navy would be procured, the dates when they would each enter service, the details of the Navy’s plan for increasing the SSN production rate to 2.33 SSNs per year while also building Columbia-class ballistic missile submarines, and the operational impact of a three- to five-boat reduction in the size of the U.S. SSN force on the ability of the U.S. SSN

⁶³ See Richard H. Ullman, “The Covert French Connection,” *Foreign Policy*, Summer 1989 (No. 75): 3-33, accessed at <https://www.jstor.org/stable/1148862>; “The French Bomb, with Secret U.S. Help, Documents from Nixon and Ford Administrations Show U.S. Assistance for French Nuclear Forces Earlier Than Previously Reported,” National Security Archive, George Washington University, May 26, 2011, accessed at <https://nsarchive2.gwu.edu/nukevault/ebb346/>; William Burr, “U.S. Secret Assistance to the French Nuclear Program, 1969-1975: From ‘Fourth Country’ to Strategic Partner,” Wilson Center, undated, accessed at <https://www.wilsoncenter.org/publication/us-secret-assistance-to-the-french-nuclear-program-1969-1975-fourth-country-to-strategic>.

⁶⁴ As noted earlier, although some press reports have stated that Australia’s investment in the U.S. (or U.S. and UK) submarine construction industrial base would total \$3 billion, the Australian government as of August 2023 had not yet definitized the size or timing of its proposed investment in the U.S. industrial base.

force to perform day-to-day and wartime SSN missions of interest to the United States.

- Selling Virginia-class boats to Australia could weaken deterrence of potential Chinese aggression if China were to find reason to believe, correctly or not, that Australia might use its Virginia-class boats less effectively than the U.S. Navy would use them if the boats were retained in U.S. Navy service, or that Australia might not involve its military, including its Virginia-class boats, in U.S.-China crises or conflicts that Australia viewed as not engaging important Australian interests. Australian Defence Minister Richard Marles in March 2023 reportedly confirmed that in exchange for the Virginia-class boats, Australia’s government made no promises to the United States that Australia would support the United States in a future conflict over Taiwan.⁶⁵ Virginia-class boats are less certain to be used in a U.S.-China conflict over Taiwan, or less certain to be used in such a conflict in the way that the United States might prefer, if they are sold to Australia rather than retained in U.S. Navy service. This would be a consequence of Australia having sovereign control over its Virginia-class boats—it is, in effect, the flip side of the earlier argument made by supporters of the proposed Pillar 1 pathway about having Australia become a second allied decisionmaking center (along with the United States) for SSN operations in the Indo-Pacific. An October 2023 CBO report states: “Would China be less deterred if the United States reduced the number of its attack submarines to help Australia develop its submarine force? Because the United States and Australia have a strong alliance, improving the Australian Navy’s [SSN] capability could help offset the U.S. Navy’s potential loss of [SSN] capability. That loss might even be more than offset because the Australian submarines would be based in the Western Pacific region and therefore could respond more quickly to any conflict with China involving Taiwan or other issues in the South China Sea. However, Australia would control its own submarines, and their participation in any particular conflict would not be guaranteed. In fact, in March 2020, the Australian defense minister stated that his country did not promise to support the United States in the event of a conflict involving Taiwan and the People’s Republic of China.”⁶⁶
- Given the challenges that the U.S. submarine industrial base is experiencing in achieving a construction rate of 2.0 Virginia-class boats per year to meet U.S. Navy needs, the ability of the submarine industrial base to achieve the higher target rate of 2.33 boat per year, so as to build in a timely manner replacement SSNs, strictly construed, for Virginia-class boats sold to Australia is uncertain. The duration of the impact of selling Virginia-class boats to Australia on the size of the U.S. SSN force is thus uncertain and could be longer than anticipated.
- The costs for Australia of acquiring, operating, and maintaining Virginia-class boats could reduce, perhaps significantly, funding within Australia’s military budget for other Australian military capabilities, particularly if Virginia SSN-related costs turn out to be higher than expected. If this were to occur, there could

⁶⁵ Rod McGuirk, “Australia Won’t Promise to Side with US in Taiwan Conflict,” *Associated Press*, March 20, 2023; Daniel Hurst, “Australia Has ‘Absolutely Not’ Committed to Join US in Event of War over Taiwan, Marles Says,” *Guardian*, March 18, 2023; Georgia Hitch, “No Promise Given to US to Assist in Potential Taiwan Conflict in Exchange for Submarines, Says Defence Minister Richard Marles,” *abc.net.au*, March 18, 2023.

⁶⁶ Congressional Budget Office, *An Analysis of the Navy’s Fiscal Year 2024 Shipbuilding Plan*, October 2023, p. 29.

be a net negative impact on Australia’s overall military capabilities for deterring potential Chinese aggression.

- A November 29, 2023, article stated “Buying those subs will be the most expensive—an estimated \$365 billion [in acquisition and life-cycle operation and support costs]—and technologically complex enterprise Australia has ever engaged in, so budget and creating an entirely new industrial base will be key. Which is why a May [2023] publication from the Australian Strategic Policy Institute [ASPI], stating the country will actually spend \$1.5 billion less on defense over the next two years, caused ripples of concern in the Lucky Country [i.e., Australia]. Asked specifically about the report, [Australian Minister for Defence Industry Pat] Conroy essentially stated that he did not agree with the premise of the question. Conroy also accused ASPI ‘of picking and choosing between what parts (of the budget) they counted and what parts they didn’t count.’ In fact, he argued, ‘the defence budget goes up every year over the forward estimates. And as importantly, if you compare those years to what the last government projected in their last budget, which is March 2022, in every year of Labor’s budget they are higher than what the Opposition committed to when they were in government. So every year the defence budget goes up, and we’ll reach 2.3 per cent of GDP at the end of the decade, so over the 10 years, moving from just slightly over 2 per cent now. So I know people are frustrated,’ Conroy said, ‘but the defence budget is increasing. Money is flowing to defence industry to deliver capable projects, critical capabilities.’ That statement was not felt by the more than half dozen industry sources who told *Breaking Defense* and other reporters during the recent Indo-Pac maritime conference that they are concerned about getting money for future investments. The ‘flow’ of money was largely restricted to existing programs, maintenance and supply, they said, with little to no new money available since the Labor government of Anthony Albanese took power.”⁶⁷
- A November 28, 2023, opinion piece stated “Despite receiving extra money to grow the [Australian] defence force since 2016, it has shrunk by about 1000 [people] a year. In questions, [Pat] Conroy was forced to say what the [Australian] Government will do over the next ten years. He said the Government was bringing forward long range strike and missile production. Australians would be aghast at just how puny these efforts are. A tiny number of missiles will be bought for the three Air Warfare Destroyers which are our only modern warships. No Tomahawks for the [Australian navy’s existing] Collins [class conventionally powered submarines]. And a few upgraded missiles for our 100 fast jets. So far, that’s it. We’ve bought or ordered zero long range ground launched missiles. The so-called missile production effort doesn’t get going for another couple of years and will produce only land artillery rockets, with a range of 70 to 90 kilometres and which can only strike targets on land, with no maritime application. For the Government, the AUKUS subs are a magic pudding, so far away you don’t have to spend any real money on them, and so impressive sounding they convince people you’re doing something on defence when you’re doing nothing. And if a few

⁶⁷ Colin Clark, “Aussie Procurement Minister Offers New AUKUS Industrial Details, Pushes Back on Budget Critique,” *Breaking Defense*, November 29, 2023.

lefties complain, all the better. But it still produces no defence capability for Australia over the next ten years, and quite possibly nothing after that either.”⁶⁸

- It would be more cost-effective to pursue a U.S.-Australia division of labor under which U.S. SSNs would perform both U.S. and Australian SSN missions while Australia invests in other types of military forces.⁶⁹
 - Such a division of labor would follow the general model of military divisions of labor that exist between the United States and some or all of its NATO and other allies for naval capabilities such as aircraft carriers, SSNs, large surface combatants, and amphibious ships, and for non-naval capabilities such as (to name only some examples) nuclear weapons, space assets, and intelligence, surveillance, and reconnaissance (ISR) capabilities.
 - It would be inconsistent to argue that the U.S.-Australia relationship is close enough to contemplate the transfer of U.S. naval nuclear propulsion technology but not close enough to permit a division of labor on SSNs.
 - The proposed SSN AUKUS pathway would result in parallel SSN-related investments in the United States and Australia comparable to parallel investments in certain military capabilities among NATO countries that have been criticized by some observers for their collective inefficiencies.⁷⁰
 - The potential alternative of a U.S.-Australia division of labor could include having Australia spend additional resources on producing long-range anti-ship missiles and/or purchasing U.S.-made long-range bombers.

⁶⁸ Greg Sheridan, “Pantomime World of the Albanese Government’s Defence Policy,” *The Australian*, November 28, 2023.

⁶⁹ In connection with a project that Canada initiated in 1987 (and canceled in 1989) to acquire a force of 10 to 12 UK- or French-made SSNs, Admiral Kinnaird R. McKee, then-Director of the U.S. Naval Nuclear Propulsion Program (aka Naval Reactors), testified in March 1988 that the project “puts at risk resources that ought to be used for other purposes” and that Canada “could make a better contribution to NATO in other areas with the same amount of money.” (U.S. Congress. House. *Hearings on National Defense Authorization Act for Fiscal Year 1989—H.R. 4264, and Oversight of Previously Authorized Programs, before the Committee on Armed Services, House of Representatives, Seapower and Strategic and Critical Materials Subcommittee, Title 1, 100th Cong., 2nd Sess., Hearings held March 1, 3, 8, 9, 10, and 17, 1988, U.S. Govt. Print. Off., 1988, H.A.S.C. No. 100-70, p. 345. The hearing in question, on submarine programs, was held on March 9, 1988. [Included in CRS/FDT bound volume collection as *House Armed Services Committee, Hearings. (Vol.) 5, 100th Congress, 2d Sess., 1988, CRS-F.*])*

⁷⁰ For examples of reports and articles discussing such inefficiencies among NATO countries and potential steps to mitigate these inefficiencies, see “EU Incentivizing Common Procurement Between Members,” *Aviation Week*, October 10, 2023; Stephen Flanagan and Anna M. Dowd, “Alliance Assignments: Defense Priorities for Key NATO States,” *War on the Rocks*, October 4, 2023; David A. - The long-range anti-ship missiles could enter service with Australian and U.S. forces within the next several years, which could be of particular value for responding to concerns about the possibility that China might take military action against Taiwan or other countries sometime within the next several years.⁷¹ These missiles would be in addition to those that Australia might already be planning to build for its own needs or for meeting joint Australian-UK-U.S. needs. By comparison, additional SSNs that would enter service in the 2030s and 2040s under the proposed Pillar 1 pathway would be of uncertain value in connection with deterring or countering potential Chinese aggression between now and 2030.⁷²
- Regarding a purchase of B-21 bombers, a November 15, 2023, opinion piece states that “B-21s will be in service with the US Air Force from the mid-2020s. If Australia joined the [B-21] program as we have with the F-35 [strike fighter] and EF/A-18 Growler electronic attack aircraft [programs], we could have early [B-21] aircraft around 2030 and at least the first 12 in service before 2035. This is not hypothetical—it is based on Northrop’s current production system and relies on Northrop keeping to the normal production maturity cycle used successfully in multiple other aircraft programs—low-rate initial production followed by full production. There would be no Adelaide assembly factory. Politically and practically, the B-21 requires no nuclear waste repository, has no IAEA [international nuclear regulatory] entanglements, provokes no nuclear proliferation concerns around reuse of highly enriched uranium, and doesn’t require nuclear reactors to be based permanently near Australian population centres. Australia could proceed with the forward basing of UK and US submarines without having our own nuclear submarines. And we could also maintain our investment in the US and UK industrial bases to increase overall allied submarine numbers, but without the high costs of purchasing and operating our own. Australia becoming a partner in the B-21 [program] creates a larger pool of these key deterrent and strike weapons in the Indo-Pacific. In contrast, the AUKUS submarine deal requires rationing of scarce submarines for decades before numbers eventually lift. The US Department of Defense is likely to welcome Australia becoming a partner as we have in the Growler and F-35, instead of an Australian government having to continue to charm future presidents to release submarines the US Navy desperately needs itself. Even if Australia were to acquire a large fleet of 36 B-21s, making it one of the most powerful air forces on the planet, we would still have \$200

⁷¹ For a study that recommends increased procurement of long-range anti-ship missiles as a high-priority for improving U.S. and allied capabilities for countering Chinese aggression in a U.S.-China conflict over Taiwan, see Mark F. Cancian, Matthew Cancian, and Eric Heginbotham, *The First Battle of the Next War, Wargaming a Chinese Invasion of Taiwan*, Center for Strategic and International Studies (CSIS), January 2023, 158 pp., which states on page 4 (emphasis as in original)

Recommendation: Increase the arsenal of long-range anti-ship cruise missiles. Bombers capable of launching standoff, anti-ship ordnance offer the fastest way to defeat the invasion with the least amount of U.S. losses. Procuring such missiles and upgrading existing missiles with this anti-ship capability needs to be the top procurement priority.

⁷² For an example of an opinion piece on this point, see Nishank Motwani, “AUKUS’s Three Pillars of Uncertainty: Sovereignty, Strategy and Costs,” Australian Strategic Policy Institute (ASPI), October 23, 2023.

billion in national treasure to spend on other things—defence and otherwise—in comparison with the current AUKUS Pillar 1 plan. Even if \$50 billion of this were reinvested in the fast-moving digital part of AUKUS—Pillar 2—to get it moving, AUKUS would no longer be sucking the oxygen out of the rest of the [Australian] Defence Force because of its scale and cost and demands for scarce, skilled people.”⁷³

Technology Security

Another factor that may be considered concerns the potential impact, if any, of sharing U.S. submarine and naval nuclear propulsion with another country on the risk of that technology being stolen by China, Russia, or some other country. Regarding Canada’s project to acquire a force of 10 to 12 UK- or French-made SSNs, Admiral Kinnaird R. McKee, then-Director of the U.S. Naval Nuclear Propulsion Program (aka Naval Reactors), testified in March 1988 (i.e., years before the rise of the internet and internet-based cyber espionage):

We have a number of very sensitive arrangements with a lot of our allies on a government-to-government, navy-to-navy, military-to-military basis that deal with certain things we do. But once the Canadians talk about launching into a 12 nuclear submarine building program, we are talking about a proliferation of technology across a very broad industrial base. The Canadians intend to do 65 percent of the work [for building those submarines] in Canada. That is proliferating the technology over a wide range of industrial activities that have never had any involvement in this kind of business.

So there is, I think, a clear and present concern that dissemination would not be in our national interests. That is how we get into it.⁷⁴

Later in March 1988, before a different committee, Admiral McKee similarly testified

The concern about the security of the technology is a little complicated. The Canadians are good neighbors. We have shared alliance commitments with them. That is true; we have shared a lot of sophisticated, sensitive information, sophisticated tactical information, working exercises together, but that is between our Navies and our governments.

Taking this very sophisticated technology and disseminating it through a broad range of Canadian industry is a whole different story. They have only built ten submarines to date—during World War I. Part of the commitment is that these will be 65 percent Canadian built. That requires us to proliferate a broad range of technology in Canadian industry that is not used to dealing with this degree of sophistication, but more important, the sensitivity of the technology....

⁷⁴ U.S. Congress. House. *Hearings on National Defense Authorization Act for Fiscal Year 1989—H.R. 4264, and Oversight of Previously Authorized Programs, before the Committee on Armed Services, House of Representatives, Seapower and Strategic and Critical Materials Subcommittee*, Title 1, 100th Cong., 2nd Sess., Hearings Held March 1, 3, 8, 9, 10, and 17, 1988, U.S. Govt. Print. Off., 1988. H.A.S.C. No. 100-70, p. 351. The hearing in question, on submarine programs, was held on March 9, 1988. [Included in CRS/FDT bound volume collection as, *House Armed Services Committee, Hearings. (Vol.) 5, 100th Congress, 2d Sess., 1988, CRS-F.*]

I would rather see them go to the French than take the risk associated with transfer of [U.S.-derived] *Trafalgar* technology.⁷⁵

Potential arguments that might be made by supporters of the proposed Pillar 1 pathway include but are not necessarily limited to the following:

- Australia is fully capable of, and fully committed to, protecting U.S. submarine and naval nuclear propulsion technology. The Australian government has stated “Building on the decades of experience that the UK and the US have in protecting sensitive and classified nuclear material, naval nuclear propulsion technology and SSN capabilities, Australia has committed to a strong security posture to deliver an uncompromised SSN program, as a responsible steward of nuclear technology.”⁷⁶
- A May 23, 2023, press report stated “ASIO [Australian Security Intelligence Organisation] officers are being embedded within the Defence Department to help prevent foreign spies from stealing the highly prized nuclear-powered submarine secrets Australia plans to acquire under the AUKUS pact with the United States and United Kingdom.... [ASIO Director-General Mike Burgess] described AUKUS as a ‘great shiny example of something that foreign intelligence services would like to get insights on’, raising the importance of ensuring the Australian Defence Force has the best possible security protections as the nuclear-powered submarine plan advances. ‘It’s a new target that has received new attention from foreign intelligence services,’ Burgess said. ‘I have people embedded in the AUKUS team in Defence that actually help Defence with their security posture ... I’m confident Defence understand the threats to security and the job they have to do to manage that risk effectively.’ Attempts to access sensitive Defence information is a ‘constant’ and ‘very persistent’ threat, he added.”⁷⁷
- An October 19, 2023, press report stated “Mr. Burgess, who spoke on the sidelines of the Five Eyes intelligence summit in Palo Alto, [California,] said he also had separate concerns about adversaries trying to infiltrate Australia’s sensitive AUKUS pact information, but that ASIO was capable of handling that. ‘Some nations have said AUKUS is interesting. They’ll already be trying to tap into that through the UK and the US. Australia is now part of that,’ he said. ‘They’re probably looking for how can they get inside [AUKUS] once it is set up. That’s traditional espionage. We’re capable of handling that with our defence and defence industry partners.’ ‘Of course, given the significance of AUKUS,

⁷⁵ U.S. Congress. House. *Energy and Water Development Appropriations for 1989, Hearings before a Subcommittee of the Committee on Appropriations, House of Representatives, Subcommittee on Energy and Water Development*, 100th Cong., 2nd Sess., p. 1328. The hearing in question, on atomic energy defense activities, was held on March 23, 1988. Following the ellipsis in the above-quoted passage, the subcommittee Chairman, Representative Tom Bevill, stated: “Then maybe you ought to let them get their submarine from the French.” Admiral McKee replied: “That is what I have said. The French thing raises all kinds of ghosts in the British mind, as you can well imagine. The French alternative has been used as a hammer—the Canadians emphasize that we have to help them or they will go to the French. I would rather see them go to the French than take the risk associated with transfer of *Trafalgar* technology.”

⁷⁷ Matthew Knott, “ASIO Agents Embedded in Defence to Protect AUKUS Secrets from Foreign Spies,” *Sydney Morning Herald*, May 23, 2023.

we're in conversations with what security or additional security capabilities is needed by defence, [and by the] defence industry.”⁷⁸

- At an October 25, 2023, hearing on the submarine industrial base and its ability to support the AUKUS framework before the Seapower and Projection Forces Subcommittee of the House Armed Services Committee, Under Secretary of the Navy Erik Raven stated “We’re working very closely with Australia and the UK to make sure that there’s a common set of security principles that governs all the AUKUS security work we’re deeply engaged with. Also, NCIS [Naval Criminal Investigative Service] is establishing a presence in Australia to manage a lot of the—the counterintelligence and other concerns, but certainly part of AUKUS again is going towards an integrated industrial base so that when we talk security, we’re speaking the same language.”⁷⁹
- A November 15, 2023, press report stated “Australia’s cooperation with the United States and Britain to develop an Australian fleet of submarines powered by U.S. nuclear technology is a likely target of state-sponsored cyberespionage, the nation’s digital spy agency said on Wednesday [November 15]. The Australian Signals Directorate reported a 23% increase in cybercrimes in the country and a 14% increase in the average cost of each crime in its latest annual online threat assessment for the fiscal year that ended on June 30.... “The AUKUS partnership, with its focus on nuclear submarines and other advanced military capabilities, is likely a target for state actors looking to steal intellectual property for their own military programs,” the report said. “Cyber operations are increasingly the preferred vector for state actors to conduct espionage and foreign interference,” it added. Defense Minister Richard Marles said state online actors’ increased interest in Australian infrastructure, including the submarine program, demonstrated the need for greater investment in the nation’s cyberdefense capabilities. Marles said the government would double the Australian Signals Directorate’s online capacity, investing 10 billion Australian dollars (\$6.5 billion) over a decade.”⁸⁰

Potential arguments that might be made by skeptics of the proposed Pillar 1 pathway include but are not necessarily limited to the following:

- Chinese cyber and other espionage in the past reportedly has been successful on multiple occasions in acquiring U.S. military information and technology,⁸¹

⁷⁸ Matthew Cranston, “ASIO on High Alert as Middle East Explodes,” *Australian Financial Review*, October 19, 2023.

⁷⁹ Source: CQ transcript of hearing. Under Secretary Raven’s statement was made in reply to a question from Representative Donald Norcross, who asked: “If you could just touch base on a bit of a twist, that when we step up to the nuclear facilities classification and being able to clear a workforce, which Australia has a certain level, but certainly nowhere close to where it has to be. The challenges that they’re going to face from a domestic workforce and then their challenge like us, they’re bringing in many others from around the world to be part of that workforce. How are they going to address that challenge?”

⁸¹ See, for example, “Survey of Chinese Espionage in the United States Since 2000,” Center for Strategic and International Studies (CSIS), undated, accessed November 12, 2023, at <https://www.csis.org/programs/strategic-technologies-program/archives/survey-chinese-espionage-united-states-2000>; Xiaoshan Xue, “US Experts Urge More Efforts to Thwart China’s Acquisition of US Military Technology,” *VOA*, March 17, 2023; Nicholas Yong, “Industrial Espionage: How China Sneaks Out America’s Technology Secrets,” *BBC*, January 16, 2023; Jeffrey B. Jones, *Confronting China’s Efforts to Steal Defense Information*, Belfer Center for Science and International Affairs, Harvard (continued...)

including information relating to undersea warfare. A June 8, 2021, press report about China’s acquisition of undersea warfare technology states that “China fields increasingly advanced and ‘smart’ technologies, including torpedoes, mines, and UUVs [unmanned underwater vehicles]. As highlighted by the case of Qin Shuren, at least some of these advances are being made with the help of U.S. technology. Sometimes the technology is purchased on the open market and other times it is gained through illicit means that range from cyber theft to old-fashioned espionage and smuggling.”⁸² In 2018, Chinese hackers reportedly stole a large amount of unclassified but sensitive information relating to undersea warfare from a U.S. contractor working for the Naval Undersea Warfare Center in Newport, RI.⁸³ Some observers have expressed concern about the cybersecurity readiness of defense contractors.⁸⁴

- Notwithstanding Australia’s capability for, and commitment to, protecting U.S. submarine and naval nuclear propulsion technology, sharing this technology with another country, particularly in an era of advanced and persistent computer hacking threats, would increase the attack surface, meaning the number of potential digital and physical entry points that China, Russia, or some other country could attempt to penetrate to gain access to that technology.⁸⁵ In this instance, the addition to the attack surface could include not only Australian government organizations, but Australian contractors and subcontractors involved in proposed Pillar 1 pathway efforts.
- Hackers linked to China reportedly are highly active in attempting to penetrate Australian government and contractor computers.⁸⁶ A March 1, 2023, press report

Kennedy School, May 2020, 34 pp.; Ellen Ioanes, “China Steals US Designs for New Weapons, and It’s Getting Away with ‘the Greatest Intellectual Property Theft in Human History,’” *Business Insider*, September 24, 2019.

⁸⁴ See, for example, Eric Noonan, “The US Just Got Serious about Cybersecurity. Contractors Aren’t Ready,” *Federal Times*, November 3, 2023.

⁸⁵ The National Institute of Standards and Technology (NIST) defines attack surface as “the set of points on the boundary of a system, a system element, or an environment where an attacker can try to enter, cause an effect on, or extract data from, that system, system element, or environment.” (National Institute of Standards and Technology, Computer Security Resource Center, “Attack Surface,” accessed October 23, 2023, at https://csrc.nist.gov/glossary/term/attack_surface.) IBM similarly defines it as “the sum of vulnerabilities, pathways or methods—sometimes called attack vectors—that hackers can use to gain unauthorized access to the network or sensitive data, or to carry out a cyberattack.” (IBM, “What Is an Attack Surface?” accessed October 23, 2023, at <https://www.ibm.com/topics/attack-surface>.) The cybersecurity firm CrowdStrike similarly defines it as “the total number of all possible entry points for unauthorized access into any system. It includes all vulnerabilities and endpoints that can be exploited to carry out a security attack. The attack surface is also the entire area of an organization or system that is susceptible to hacking.” (CrowdStrike, “What Is an Attack Surface?” accessed October 23, 2023, at <https://www.crowdstrike.com/cybersecurity-101/attack-surface/>.)

⁸⁶ See, for example, Max Mason, “Chinese Hackers Use G7 Ruse to Target Australian Government Officials,” *Australian Financial Review*, June 19, 2023; News.com.au, “Chinese Cyber Attack on Australia Exposed,” *News.com.au*, August 30, 2022; Bill Toulas, “Chinese Hackers Target Australian Govt with ScanBox Malware,” *Bleeping Computer*, August 30, 2022; Jamie Tarabay, “How Hackers Hammered Australia After China Ties Turned Sour,” *Bloomberg*, August 30, 2021; Jacob Greber, “US accuses Chinese nationals of hacking Australian defence contractor,” *Australian Financial Review*, July 22, 2020; Daniel Hurst, “Hackers Linked to China Allegedly Stole Data from Australian Defence Contractor,” *Guardian*, July 22, 2020; Lauren Ferri and Charlie Coë, “Top Chinese Hackers (continued...)”

stated that “Chinese hackers ‘significantly increased’ attacks on Australian government, industry and education after the AUKUS nuclear submarine pact came under the crosshairs of the world’s most prolific espionage operation, according to cyber security experts.” The article quoted a senior employee of the cybersecurity company CrowdStrike as stating that the AUKUS agreement “has been in the crosshairs of Australia’s cybersecurity adversaries since it was announced.”⁸⁷

Risk of Accident That Could Impact Views on Safety of U.S. Ships

Another factor that may be considered is the risk of an accident involving an Australian-owned SSN—either a Virginia-class SSN or an AUKUS SSN incorporating U.S. naval nuclear propulsion technology—on U.S. public support for operating U.S. Navy nuclear-powered ships and/or the ability of U.S. Navy nuclear-powered ships to make port calls around the world. Such port calls can be made for purposes of sending deterrent signals of alliance resolve and solidarity to potential adversaries; conducting diplomacy and engagement activities with the countries being visited; resupplying U.S. Navy nuclear-powered ships with food and other provisions; and providing rest and recreation for the crews of those ships.

A 2020 publication from the U.S. Naval Nuclear Propulsion Program (aka Naval Reactors) states

Naval Reactors maintains an outstanding record of over 166 million miles safely steamed on nuclear power. The Program currently operates 98 reactors and has accumulated over 7,100 reactor-years of operation.... Because of the Program’s demonstrated reliability, U.S. nuclear-powered warships are welcomed in more than 150 ports of call in over 50 foreign countries and dependencies....

From the beginning, the [U.S. Naval Nuclear Propulsion] Program recognized that the environmental safety of operating U.S. nuclear-powered ships would be key to their acceptance at home and abroad. The Program maintains the same rigorous attitude toward the control of radioactivity and protection of the environment as it does toward reactor design, testing, operation, and servicing. As a result, the Program has a well-documented record showing the absence of any adverse environmental effect from the operation of U.S. nuclear-powered warships. Because of this record, these ships are welcome in over 150 ports in over 50 countries and dependencies....

Throughout the Program’s entire history—over 7,100 reactor years of operation and more than 166 million miles steamed on nuclear power—there has never been a reactor accident, nor any release of radioactivity that has had an adverse effect on human health or the quality of the environment.⁸⁸

Stole a Treasure Trove of Information from an Australian Defence Contractor Including Top-Secret Weapon and Military Data,” *Daily Mail*, July 21, 2020.

⁸⁷ Justin Vallejo, “Extent of Hacks against Australia after AUKUS Deal Revealed,” *Herald Sun*, March 1, 2023.

⁸⁸ Department of Energy and Department of the Navy, *The United States Naval Nuclear Propulsion Program 2020, Over 166 Million Miles Safely Steamed on Nuclear Power*, pp. 1, 31, 32. The Department of Energy similarly states

From the beginning, the [Naval Nuclear Propulsion] Program recognized that the environmental safety of operating U.S. nuclear-powered ships would be key to their acceptance at home and abroad.

The Program maintains the same rigorous attitude toward the control of radioactivity and protection of the environment as it does toward reactor design, testing, operation, and servicing. As a result, the Program has a well-documented record showing the absence of any adverse environmental effect from the operation of U.S. nuclear-powered warships. Because of this record, these ships are

(continued...)

At an April 6, 1987, hearing before the Seapower and Strategic and Critical Materials subcommittee of the House Armed Services Committee on the Navy's Seawolf (SSN-21) submarine program, Admiral Kinnaird R. McKee, then-Director of the U.S. Naval Nuclear Propulsion Program (aka Naval Reactors), listed the attributes that the Navy wanted the SSN-21 design to have, including the following:

Finally, safety. Don't forget, if there is even the perception of a reactor accident, the fundamental security posture of the United States could change overnight. Imagine a Chernobly-type [sic: Chernobyl-type] accident in Norfolk on the [Navy's nuclear-powered aircraft carrier] U.S.S. *Nimitz*. So we have to take safety factors into account.⁸⁹

In 1987-1988, when Canada was pursuing its project to acquire a force of UK- or French-made SSNs, some observers argued that an accident with a Canadian-owned, British-designed SSN whose propulsion plant employed technology derived from the U.S. nuclear propulsion technology that the United States provided to the UK beginning in 1958 could affect U.S. public support for operating U.S. Navy nuclear-powered ships and/or the ability of U.S. Navy nuclear-powered ships to make port calls around the world. A 1990 National War College report stated that

the strongest opposition to the U.K.-Canadian SSN deal within DOE [the Department of Energy] came from Naval Reactors, which wanted no part of any nuclear propulsion transfer deal. For DOE the issues were simple. For Canada to build SSN's, large amounts of sensitive classified nuclear propulsion technology would have to be transferred to the Canadian government and industry. The question was would it be protected? Second, Canada did not have the critically important technology infrastructure which Naval Reactors knew was necessary for the safe application of naval nuclear propulsion. Their greatest concern, one shared by all in DOE and DOD, was that a reactor accident aboard a Canadian SSN using U.S.-design nuclear technology could severely damage public confidence in the safety of all nuclear vessels, severely curtailing the operational freedom and port access of the U.S. Navy, 40% of whose vessels were nuclear[-powered].⁹⁰

A November 23, 1987, press report on remarks made to reporters by U.S. Navy Captain Robert F. Hofford, the U.S. naval attaché in Ottawa, following the end of his earlier-noted November 18, 1987, presentation at a conference in Ottawa, Canada, stated that

some in the Pentagon fear that a Canadian submarine accident could derail the United States' plan to procure its own new class of attack submarine, the SSN-21. An accident in Canada would galvanize anti-nuclear and pacifist groups against the U.S. submarine program.

If an accident should happen, "We can't wipe our hands of the Canadian program. I think that realization is coming out here," he [Hofford] told reporters.

"We would like the Canadian submarine program to be autonomous," he said. Assuming Canada awards the contract [for its then-planned SSN acquisition program] to the British, any nuclear accident "would reflect on the United States and could very easily put our

welcome in over 150 ports in more than 50 countries and dependencies, as well as in U.S. ports.

(Department of Energy, National Nuclear Security Administration, "Powering the Navy" expandable section entitled "Concern for the Environment," accessed October 11, 2023 at <https://www.energy.gov/nnsa/powering-navy>.)

⁸⁹ U.S. Congress. House. SSN-21, Hearing before the Seapower and Strategic and Critical Materials Subcommittee of the Committee on Armed Services, House of Representatives, 100th Cong., 1st Sess., Hearing Held April 6, 1987, H.A.S.C. No. 100-49, U.S. Govt. Print. Off., 1988, p. 19.

⁹⁰ Gerald L. Brubaker, *Taking a Dive for a Friend—The Decision to Transfer Nuclear Submarine Technology to Canada*, National War College, December 10, 1990, pp. 6-7.

programs into jeopardy. We don't want that to happen because we realize the strategic value of the [American] submarine and the submarine program."⁹¹

A November 27, 1987, press report stated that

the degree of potential American opposition [to the Canadian SSN project] was underscored last week by remarks made at a defense contractors' conference in Ottawa by the United States naval attaché here, Capt. Robert F. Hofford.

Captain Hofford said that concerns about the Canadian submarines, which would be built in Canadian shipyards, could cause Congress to delay granting permits for the use of American reactor technology beyond the March 1988 deadline set by the [Canadian] Government for a choice between contending [UK and French] designs....

In part, safety concerns have been prompted by the fact that Canadian shipyards have built no submarines since World War I, and no nuclear-powered vessels of any kind....

Canadian officials say the United States has continued to argue that Canada should abandon the submarine program and spend the money on upgrading its conventional defenses, which have withered badly over the last 20 years.⁹²

A November 5, 1987, letter from Representative Melvin Price⁹³ to Secretary of Defense Caspar W. Weinberger and Secretary of Energy John S. Herrington stated that "a mishap involving a Canadian nuclear submarine could undermine the public confidence necessary for the successful operation of our own nuclear [-powered] Navy, [which accounts for] over 40 percent of our ships."⁹⁴

At a March 21, 1988, hearing before the Senate Armed Services Committee to consider the nomination of William Ball III to be Secretary of the Navy, Senator J. James Exon, the chairman of the Strategic Forces and Nuclear Deterrence subcommittee of the Senate Armed Services Committee, discussed the Canadian SSN project. A March 22, 1988, press report about the hearing stated "After the hearing, Exon and fellow committee member Sen. John Warner (R-Va.) said in an interview that the project is a dangerous technological and political gamble for Canada and the United States.... 'Any minor accident with the nuclear power plant could result in our own nuclear-powered vessels being barred from 80 percent of the world's ports,' Exon said."⁹⁵

In a floor statement printed in the *Congressional Record* for March 25, 1988, Senator Exon stated

My specific concern, however, has to do with whether Canada fully recognizes and can afford the extensive infrastructure of training and support facilities to ensure that our transferred technology will be operated safely. Mr. President, more and more ports of the world are being closed to the U.S. Navy for reasons of antinuclear sentiment around the world. From New Zealand to the Philippines to Northern Europe, we are faced with a serious challenge to the continued operation of and support for the necessary presence of

⁹⁵ George C Wilson, "Transfer of U.S. Nuclear Sub technology Considered," *Washington Post*, March 22, 1988, p. 4. The article was published in other editions of the paper with the headline "U.S. Considers Transfer of Secret Sub Technology."

the U.S. Navy. In short, in this era of nuclear phobia, we must maintain and enhance our safe standards of shipboard nuclear propulsion.

Our Navy has had over 34 years experience with nuclear-powered ships and we have had no accidents. This is the result of a very careful training program, very stringent operating procedures, and shipyards and workers highly skilled in nuclear technology.

For Canada, nuclear-powered ships will be a new experience. Although the Canadians considered acquiring nuclear subs in the early 1960's and began an exchange program with the United States and Royal Navies on the matter, the proposed submarines would be Canada's first nuclear-powered ships. To be fair, the Canadians do operate nuclear powerplants and their safety record is good. But submarines are different.

Canada's Navy is indeed impressive in its professionalism and technology. Its record is long and admirable. In fact, the Royal Canadian Navy was the third largest navy in the world at the end of World War II. We have worked long and closely with the Canadians in the area of nuclear weapons and defense. That is a sound relationship which could be expanded if it proves prudent to do so.

But Mr. President, I want to be absolutely sure that the Canadians understand the tremendous responsibility they assume when they acquire nuclear submarines.

If they should ever experience a nuclear accident or incident, the blame, rightly or wrongly, could be transferred by the United States. Rightly or wrongly, our Nation as well as Canada, could and probably would bear the consequences. We could see more ports around the world closed to our nuclear powered or nuclear armed ships. This is the heart of my concern. With 40 percent of our naval forces nuclear, any nuclear-powered accident, however minimal, would be blown all out of proportion and we would very likely find a "Not Welcome" sign posted more prominently in more ports where it is vital for our ships to port if they are to perform their critical mission.

So before we either transfer nuclear power technology or allow the British to transfer the technology we initially provided to them, I will pursue this matter very carefully in the hearings in the Armed Services Subcommittee on Strategic Forces and Nuclear Deterrence.⁹⁶

Immediately following the statement from Senator Exon quoted above, the *Congressional Record* for March 25, 1988, includes a floor statement from Senator John Warner, the ranking member of the Senate Armed Services Committee, in which Senator Warner stated

The U.S. Congress knows from decades of experience that the costs associated with ocean-going nuclear vessels are enormous, encompassing not just development and acquisition, but also constant training and elaborate supporting shore establishment and overhaul facilities. Let there be no misunderstanding: This is an enormously complex and costly matter, and no nation should enter into such an undertaking without an exhaustively thorough appreciation for those complexities and costs. Congress will carry certain responsibilities as assigned by the Atomic Energy Act of 1954, should the Canadians desire the British submarine design. With the benefit of knowledge derived from our own experience, Congress must conscientiously and fairly examine the Canadian proposal, in our own national security interests. We need to know how Canada proposes to institute this program; and how Canada proposes to insure, as my distinguished chairman mentioned, that the standard of nuclear safety of such a fleet will be at least as high as that of the United States and the British in the operation of their fleets.⁹⁷

⁹⁶ *Congressional Record*, March 25, 1988, pp. 5293-5294. The full text of Senator Exon's floor statement is reprinted in **Appendix E**.

⁹⁷ *Congressional Record*, March 25, 1988, pp. 5294-5295. The full text of Senator Warner's floor statement is reprinted in **Appendix E**.

Supporters of the proposed Pillar 1 pathway could argue that the Australian Navy is a fully professional force that would operate and maintain its Virginia-class boats in a manner fully adhering to the U.S. Navy's strict and exacting safety, quality-control, and accountability standards for submarines and nuclear-powered ships⁹⁸ so as to minimize, to the same extent as in the U.S. Navy, the risk of an accident that might call into question for third-party observers the safety of U.S. Navy nuclear-powered ships. They could argue that Australia fully understands that avoiding accidents can be important to maintaining access for U.S. Navy nuclear-powered ships to ports around the world, because Australia itself in 1971 suspended visits by U.S. Navy and other nuclear-powered ships to Australian ports pending a review of the safety implications of such visits.⁹⁹ Under the proposed Pillar 1 pathway, they could argue, Australian personnel would be trained in the same philosophy and procedures used by the U.S. Navy to minimize the risk of such an accident. They could argue that the limited scale of Australia's existing nuclear-reactor infrastructure—Australia currently operates only one nuclear reactor, a research reactor that uses low-enriched uranium (LEU)¹⁰⁰— would mean that U.S. Navy personnel who train Australian personnel would not face a significant task in overcoming preexisting, ingrained Australian practices that might be inconsistent with U.S. Navy philosophy and procedures. They could also argue that in November 2023, the Australian government introduced into Australia's parliament the Australian Naval Nuclear Power Safety Bill 2023, which is a bill to

establish a new, independent regulator to ensure Australia applies the highest standards of nuclear safety across its nuclear-powered submarine enterprise and can continue to implement AUKUS without delay.

... The new Australian Naval Nuclear Power Safety Regulator will draw on the experience of the US and the UK to deliver international best practice in nuclear safety, as the Government delivers Australia's conventionally armed, nuclear-powered submarine capability.

The Regulator will be an independent, statutory agency within the Defence portfolio and operate within Australia's existing system of regulation.

The legislation will also establish a fit-for-purpose regulatory framework that imposes strict nuclear safety duties and licensing requirements for activities related to nuclear-powered submarines.

It will also impose new offences for breaches of nuclear safety duties, including serious criminal and civil penalties.¹⁰¹

⁹⁸ For further discussion on these standards, see, for example, John W. Crawford and Steven L. Krahn, "The Naval Nuclear Propulsion Program: A Brief Case Study in Institutional Constancy," *Public Administration Review*, vol. 58, no. 2, March/April 1998: 159-166.

⁹⁹ See Commonwealth of Australia, Royal Australian Navy, *Port Visits to Australia by Nuclear-Powered Vessels: A Historical Context*, 2023, PDF pages 7 to 10 of 26, accessed November 8, 2023, at <https://www.navy.gov.au/sites/default/files/documents/Port%20Visits%20to%20Australia%20by%20Nuclear-Powered%20Vessels%20-%20A%20Historical%20Context.pdf>. See also Australian Government, Defence, "Australian Naval Nuclear Power Safety Bill 2023," undated; Parliament of Australia, "Australian Naval Nuclear Power Safety Bill 2023 [and] Australian Naval Nuclear Power Safety (Transitional Provisions) Bill 2023," Bills Digest No. 32, 2023–24, November 24, 2023; Parliament of Australia, Bills of the Current Parliament, "Australian Naval Nuclear Power Safety Bill 2023," posted at <https://parlinfo.aph.gov.au/parlInfo/search/display/display.w3p;query=Id%3A%22legislation%2Fbillhome%2Fr7104%22> (continued...)

Skeptics of the proposed Pillar 1 pathway could argue that while the Australian Navy is a fully professional force that would operate and maintain its Virginia-class boats in a manner fully adhering to the U.S. Navy's strict and exacting safety, quality-control, and accountability standards for submarines and nuclear-powered ships, selling Virginia-class boats to Australia or building for Australia AUKUS SSNs that incorporate U.S. nuclear propulsion technology would unavoidably make another country (Australia) responsible for preventing an accident with an SSN that might call into question for third-party observers the safety of U.S. Navy nuclear-powered ships. They could argue that the second variation of a U.S.-Australian division of labor outlined earlier—the variation under which U.S. SSNs perform Australian SSN missions indefinitely—would avoid that situation and keep all U.S.-made SSNs under the control of the U.S. Navy, which has a proven record extending back to 1954¹⁰² of safely operating its nuclear-powered ships.

Summary of Some Key Factors

Drawing from the above discussion, some key factors that Congress may consider in assessing whether to approve, reject, or modify the proposed Pillar 1 pathway include but are not necessarily limited to the following:

- **Sufficiency of information.** The sufficiency of information available to Congress for adequately assessing the merits of the proposed Pillar 1 pathway.
- **Analytical basis and business case.** The analytical basis and business case for the proposed Pillar 1 pathway, including
 - whether an analytical basis was established by conducting a rigorous analysis of alternatives (AOA), analysis of multiple concepts (AMC), or equivalent study prior to the announcement of the proposed Pillar 1 pathway in September 2021, and
 - the potential implications of proceeding with the proposed Pillar 1 pathway without a pre-September 2021 analytical basis or a strong business case.
- **Deterrence and warfighting capability.** The potential net impact on deterrence on warfighting capability of the proposed Pillar 1 pathway, including
 - the deterrent value of Australia being a second allied decisionmaking center (along with the United States) for SSN operations in the Indo-Pacific;
 - how Virginia-class boats sold to Australia would be used for deterrence or in potential conflict scenarios, compared with how they would be used for those purposes if they remained in U.S. Navy service, and how China might (correctly or not) assess this question;
 - the impact of selling three to five Virginia-class boats to Australia on the size of the U.S. SSN force, and the ability of the U.S. submarine construction industrial base to build, as replacements for sold Virginia-class boats, three to five new replacement SSNs, and the dates when the replacement SSNs would enter service; and

22; Australian Government, Defence, *Discussion Paper: The Legal and Regulatory Framework to Support Naval Nuclear Power Safety*, undated, 18 pp.; Kirsty Needham, "Australia to create navy nuclear safety watchdog for AUKUS," *Reuters*, December 12, 2023.

¹⁰² The U.S. Navy's first nuclear-powered ship, the attack submarine *Nautilus* (SSN-571), was commissioned into service on September 30, 1954.

- the net impact on funding that would be available within Australia’s military budget for other Australian military capabilities that could contribute to combined U.S.-UK-Australian deterrence and warfighting capability, and
- the cost-effectiveness of using Australian funding for acquiring and sustaining an Australian SSN force compared with using Australian funding for other military capabilities (such as producing long-range anti-ship missiles and/or purchasing B-21 long-range bombers) that are needed for deterring or countering potential Chinese aggression.
- **Technology security.** The impact, if any, of transferring U.S. submarine and naval nuclear propulsion technology to Australia on the risk of China, Russia, or some other country gaining access to that technology.
- **Risk of accident.** The risk of an accident involving an Australian-owned SSN that might call into question for third-party observers the safety of all U.S. Navy nuclear-powered ships and thereby affect U.S. public support for operating U.S. Navy nuclear-powered ships and/or the ability of U.S. Navy nuclear-powered ships to make port calls around the world.
- **Potential alternative of U.S.-Australia division of labor.** How the proposed Pillar 1 pathway compares on the above factors to the alternative described earlier of a U.S.-Australia division of labor on SSNs and other military capabilities.

Projected SSN Force Levels vs. SSN Force-Level Goal

Another issue for Congress concerns projected SSN force-levels compared to the SSN force-level goal. As mentioned earlier, the Navy’s current force-level goal, which was released in December 2016, calls for achieving and maintaining a fleet of 355 manned ships, including 66 SSNs. The Navy and the Office of the Secretary Defense have been working since 2019 to develop a successor Navy force-level goal to replace the 355-goal of 2016. Studies of this emerging force-level goal that have been released by the Navy in summary form suggest that the new force-level goal could call for achieving and maintaining a force of 66 to 72 SSNs.

The Navy’s FY2024 30-year (FY2024-FY2053) shipbuilding plan includes three alternative 30-year shipbuilding profiles for the period FY2029-FY2053. (These profiles do not include the impact under the AUKUS proposed Pillar 1 pathway of selling three to five Virginia-class boats to Australia, or of eventually procuring additional SSNs as replacements for the boats that would be sold to Australia.) Under these profiles, the SSN force would reach a minimum of 46 boats in FY2030, and grow to 60, 69, or 63 boats by FY2053. Under the alternative where the SSN force grows to 69 boats by FY2053, the force would reach 66 boats in FY2049. Potential questions for Congress include the following:

- Should the Navy’s next force-level goal—the successor to the 355-ship goal of 2016—include an SSN force-level goal of 66 boats, 72 boats, or some other number of boats?
- What are the potential operational implications of the SSN force declining to a minimum of 46 boats in FY2030, and of remaining below the 66-boat force-level goal until at least FY2049?

In assessing these questions, Congress may consider several factors, including but not necessarily limited to the following:

- U.S. national security strategy and national defense strategy, and the contributions that SSNs make to fulfilling those strategies;
- the funding that would be needed each year to procure SSNs and operate and support the SSN force, and the potential impact of SSN-related funding requirements on funding available for other Navy or DOD programs; and
- the capacity of the submarine construction industrial base.

Regarding the first factor above, DOD officials and other observers view SSNs as particularly useful for implementing certain elements of the national defense strategy because of their ability to evade China's improving anti-access/area-denial (A2/AD) forces.¹⁰³

Regarding the second factor above, as noted earlier, when procured at a rate of two boats per year, VPM-equipped Virginia-class SSNs have an estimated procurement cost of about \$4.3 billion per boat. Increasing the size of the SSN force would increase the SSN force's annual operation and support costs.

The third factor above—the capacity of the submarine construction industrial base—is discussed further in the next section.

Industrial-Base Capacity for Building Both Virginia- and Columbia-Class Boats

Overview

A related issue for Congress—one that existed prior to the September 2021 announcement of the above-discussed AUKUS proposed Pillar 1 pathway, and would continue to exist in the absence of the proposed AUKUS Pillar 1 pathway—concerns the ability of the submarine construction industrial base to execute the work associated with procuring one Columbia-class SSBN plus two VPM-equipped Virginia-class SSNs per year (a procurement rate referred to in short as 1+2). (In the “1+2” nomenclature, the 2 refers to being able to produce 2.0 Virginia-class boats per year.) Policymakers and other observers have expressed concern about the industrial base's capacity for executing a 1+2 workload without encountering bottlenecks or other production problems in one or both of these programs. In a nutshell, the challenge for the industrial base—both shipyards and supplier firms—is to ramp up production from one “regular” Virginia-class boat's work per year (the volume of work prior to FY2011) to the equivalent of about five “regular” Virginia-class boats' work per year (the approximate volume of work represented by two VPM-equipped Virginia-class boats and one Columbia-class boat).¹⁰⁴ In other words, the challenge for the industrial base is to quintuple the pre-2011 volume of annual production by 2028.

Concerns about the ability of the submarine construction industrial base to execute the workload resulting from a sustained 1+2 procurement rate were heightened starting in 2019 by the earlier-noted reports about challenges faced by the two submarine-construction shipyards and associated supplier firms in meeting scheduled delivery times for Virginia-class boats as the Virginia-class

¹⁰³ For additional discussion, see CRS Report RL33153, *China Naval Modernization: Implications for U.S. Navy Capabilities—Background and Issues for Congress*, by Ronald O'Rourke.

¹⁰⁴ If building a Virginia-class boat is viewed as requiring one unit of work, then building a VPM-equipped Virginia-class boat can be viewed as requiring about 1.25 units of work, and building a Columbia-class boat can be viewed as requiring about 2.5 units of work. On this basis, building two VPM-equipped Virginia-class boats and one Columbia-class boat would require about five units of work (1.25 + 1.25 + 2.5 = 5.0).

program transitions from production of two “regular” Virginia-class boats per year to two VPM-equipped boats per year.¹⁰⁵

Although Virginia-class submarines are being procured at a rate of two boats per year, Navy officials have noted that deliveries of Virginia-class submarines from GD/EB and HII/NNS have averaged 1.2 boats per year for the past five years.¹⁰⁶ On March 29, 2023, Secretary of the Navy Carlos Del Toro testified that the Virginia-class production rate was at that point about 1.4 boats per year.¹⁰⁷ At an April 28, 2023, briefing on the Virginia-class program for CRS and CBO, Navy officials stated that the rate as of that date was about 1.3 boats per year.¹⁰⁸ A March 31, 2023, press report stated that Navy officials estimate that it will take another five years—until 2028—before the delivery rate will increase to 2.0 boats per year.¹⁰⁹ In advance policy questions submitted for a September 14, 2023, hearing before the Senate Armed Services Committee to consider her nomination to be Chief of Naval Operations, Admiral Lisa Franchetti, the Vice Chief of Naval Operations, stated that the Navy’s goal is to stabilize the Virginia-class construction rate at 1.4 boats per year by the end of 2023, increase it to at least 1.5 boats per year by the end of 2024, and increase it to 2.0 boats per year by 2028.¹¹⁰

The Navy’s report on its FY2024 30-year (FY2024-FY2053) shipbuilding plan states

Within the overall industrial base, including both shipyards and suppliers, varying levels of capacity and risk exist. Nuclear powered ship production, a unique capability with little to no opportunity for commercial or dual use production, is provided by two private shipyards that are currently facilitated and certified to construct nuclear powered ships and will be at capacity for the next 15-plus years building Columbia class SSBNs, Virginia class SSNs, next generation SSNs, and Ford class CVNs. Industrial base funding was provided in FY2023 to increase infrastructure, reduce production risk, help stabilize the more than 350 critical suppliers, and help enable recruitment, training and retention of the

¹¹⁰ Senate Armed Services Committee, Advance Policy Questions for Admiral Lisa M. Franchetti, USN, Nominee for Appointment to be Chief of Naval Operations, p. 31.

skilled production workforce. The PB2024 request includes funding to continue these efforts.¹¹¹

As discussed earlier in this report, the Navy has testified that meeting both U.S. Navy needs and additional needs under the AUKUS proposed Pillar 1 pathway would require increasing the Virginia-class production rate further, to 2.33 boats per year. Under the nomenclature used here, such a combined Columbia-plus-Virginia procurement rate would be expressed as 1+2.33.

The Navy and industry are working to build up the capacity of the submarine industrial base to support a 1+2.33 procurement rate by sometime after 2028. Building up the industrial base's capacity to a 1+2.33 capacity will require investing several billion dollars for capital plant expansion and improvements and workforce development at both the two submarine-construction shipyards (GD/EB and HII/NNS) and submarine supplier firms. Some of this funding has been provided in FY2023 and prior years, some of it is requested for FY2024, some of it would be requested in FY2025 and subsequent years, and some of it would be provided, under the AUKUS proposed Pillar 1 pathway, by Australia. The funding requested for FY2024 includes both funding in the Navy's FY2024 budget submission, and the supplemental funding for the submarine industrial base that was requested on October 20, 2023.

At an October 25, 2023, hearing on the submarine industrial base and its ability to support the AUKUS framework before the Seapower and Projection Forces Subcommittee of the House Armed Services Committee, the Navy provided testimony on its plan to increase the industrial base's capacity to support the production of 2.33 Virginia-class boats per year and thus a combined Columbia-plus-Virginia procurement rate of 1+2.33. The Navy's testimony on its plan is reprinted in **Appendix F**.

Some observers have expressed interest in expanding the capacity of the submarine construction industrial base to support a procurement rate of one Columbia-class boat plus three Virginia-class boats plus per year (referred to in short as 1+3). Building three VPM-equipped Virginia-class boats and one Columbia-class boat per year could require the equivalent of about 6.25 "regular" Virginia-class boats' work per year, if the Virginia-class boats are built to the VPM-equipped configuration.¹¹²

As noted earlier, on December 21, 2021, President Biden signed three determinations permitting the use of the Defense Production Act (DPA) to strengthen the U.S. submarine industrial base for the purpose of increasing production of Virginia-class submarines.

Press Report

A September 8, 2023, press report stated

The U.S. Navy expects the submarine-industrial base to start delivering attack submarines on time by 2028—more than a decade after vendors and shipbuilders began struggling to keep up with growing demand, made worse by the pandemic and the seismic disruption it brought to the labor market.

In fact, the Navy says, industry will have additional capacity by the early 2030s to start increasing the size of the attack sub fleet, which is currently smaller than its required size

¹¹¹ See U.S. Navy, *Report to Congress on the Annual Long-Range Plan for Construction of Naval Vessels for Fiscal Year 2024* March 2023, p. 9.

¹¹² If building a Virginia-class boat is viewed as requiring one unit of work, then building a VPM-equipped Virginia-class boat can be viewed as requiring about 1.25 units of work, and building a Columbia-class boat can be viewed as requiring about 2.5 units of work. On this basis, building three VPM-equipped Virginia-class boats and one Columbia-class boat would require about 6.25 units of work ($1.25 + 1.25 + 1.25 + 2.5 = 6.25$).

and would be more so following the sale of a couple boats to Australia as part of the AUKUS trilateral pact.

To get there, the sea service anticipates spending \$6.3 billion to bolster the submarine-industrial base—on top of the annual cost of buying and repairing submarines....

The Navy spent \$2.3 billion from fiscal 2018 to fiscal 2023 “to build and strengthen the Submarine Industrial Base’s capacity, capability and resiliency,” Whitney Jones, director of the Navy’s Submarine Industrial Base initiative, told Defense News in a written statement.

This money was spent across five main lines of effort.

First is supplier development, after what Jones called the “slow but sustained degradation of domestic manufacturing over the past 40 years.”

This money would boost the production capacity of existing suppliers, develop new suppliers in areas where there may be a single vendor building a critical part, and addressing market sectors where there has been a significant demand increase, such as electrical and electronics subcomponents....

The second area is shipyard infrastructure, to ensure General Dynamics Electric Boat and HII’s Newport News Shipbuilding can ramp up their production to a rate that will, in FY26, hit its highest rate by tonnage since World War II: one Columbia-class ballistic missile submarine and two Virginia-class attack submarines with the Virginia Payload Module insert each year, dubbed a 1+2 production rate....

The shipyards are making their own investments. For example, Newport News Shipbuilding spokesman Todd Corillo told Defense News the yard is in the midst of making \$1.9 billion in capital investments that started in 2016 and will run through 2025, which include facilities to accelerate submarine production.

The Navy is also pitching in with support for the facilities and equipment needed to keep up with growing demand.

The third effort, strategic outsourcing, appears to be taking some of this growing work away from the two shipyards. Jones said the Navy is looking to move at least 5 million production hours a year in large-scale steel fabrication, outfitting and other heavy manufacturing work to other locations, allowing the shipyards to focus on outfitting, final assembly and testing....

The fourth effort is workforce development, as companies in the submarine-industrial base of all sizes and in all locations struggle to recruit and retain the workers they need.

And the fifth is investing in new manufacturing technologies that can make work processes more efficient, such as automated welding, robotics and additive manufacturing.

In total, Jones said, the Navy and the submarine-industrial base are executing 79 projects in the current fiscal year aimed at boosting the capability, capacity and quality of work in the sub-tier supply chain, in support of the so-called 1+2 production rate of Columbia and Virginia submarines....

The Navy proposed spending \$2.4 billion from FY24 to FY28 to further infuse cash into the supply chain and churn out parts to support submarine maintenance....

During an Aug. 3 earnings call, HII President Chris Kastner said the company, through the second quarter of this year, “hired over 3,200 craftsmen and women on a solid pace to meet our full year plan of approximately 5,000. Although we’re meeting our hiring targets, attrition remains high and labor is still the greatest risk to meeting our plan.”

He called labor “the largest obstacle, the largest risk” on the Virginia-class program, and said the company would have to focus on recruiting, training and retaining skilled workers for years to come....

Jones, the Navy official, said FY24 money would address those issues. Beyond outlining previous and upcoming initiatives, she highlighted an effort to use data analytics to identify the best uses for this submarine-industrial base money.

The Navy team “must quantitatively and qualitatively describe challenges, gaps, and the impact of efforts/investments,” she said.

As part of that effort, her office has mapped out and performed a risk assessment of the 16,000 suppliers in the submarine-industrial base. It identified the more than 200 million parts the two shipbuilders will need to buy in the next 10 years, and found 15 critical chokepoints that could threaten these future purchasing plans.¹¹³

Strategic Outsourcing

One option for addressing industrial-base challenges of building both Columbia-class boats and Virginia-class SSNs at the same time is to increase the use of shipyards other than GD/EB and HII/NNS, as well as other manufacturing facilities, in building components of Columbia- and/or Virginia-class boats—a practice sometimes referred to as strategic outsourcing. An October 21, 2022, press report states

The U.S. Navy is pouring billions of dollars into shoring up the companies that help build nuclear-powered submarines and aircraft carriers.

But these companies, and especially prime contractors General Dynamics Electric Boat and HII’s Newport News Shipbuilding, cannot hire enough people to keep up with demand.

So they’re outsourcing work that was previously done in-house, two admirals said.

Rear Adm. Jon Rucker, the program executive officer for attack submarines, said the Navy spent more than \$1 billion between fiscal 2018 and fiscal 2022, and that the service is committed to \$2.4 billion from fiscal 2023 to fiscal 2027.

These funds cover supplier development, workforce development, shipbuilder infrastructure, the development of technologies such as additive manufacturing and nondestructive testing, government oversight, and strategic outsourcing.

In terms of tonnage of submarine construction, the Navy will see a 5.5 times increase from FY11 to FY25. But the number of suppliers has dropped to about 5,000, compared to 17,000 companies during the last submarine construction surge in the 1980s, Rucker said last month at an American Society of Naval Engineers conference.

Rucker said the Navy is trying to target its investments where it can make the most impact: 350 companies are considered “critical suppliers” in the submarine-industrial base, and 55% of those are located in six states. So workforce development dollars are focused on those states to do the most good for critical suppliers in need of more workers. This effort could see the establishment of new training sites in Virginia and Pennsylvania.

Outsourcing is becoming more important as some regions realize they aren’t receiving enough interest for people to join the manufacturing industry, despite federal and state government efforts to create manufacturing training opportunities.

¹¹³ Megan Eckstein, “The US Navy Is Spending Billions to Stabilize Vendors. Will It Work?” *USNI News*, September 8, 2023.

“We are saturated in certain areas of the country. The Northeast is one of those. If we cannot bring the people to the work, we’re going to take the work to the people,” Rucker said.

Today, he explained, Electric Boat outsources 1.1 million hours’ worth of work a year and Newport News Shipbuilding outsources 900,000 hours as they build new Virginia- and Columbia-class submarines.

By 2025, that combined 2 million hours will grow to 5 million, he said—which equates to half the work to build a Virginia submarine.

Rucker said companies across the U.S. are building structural pieces of submarines, including some large modules, that were previously built at Electric Boat and Newport News facilities. Now they’re constructed by companies with available workers and space, and then shipped to the shipyard for assembly.¹¹⁴

A December 6, 2022, news release from Austal USA of Mobile, AL—a shipyard that builds conventionally powered surface ships for the Navy—states

Production has commenced at Austal USA’s shipyard in Mobile, Ala., in support of their strategic partnership with General Dynamics Electric Boat (GDEB) to support the U.S. Navy’s recapitalization of the nation’s nuclear submarine fleet. Leveraging Austal USA’s lean manufacturing techniques and modern steel production line facilities, a focus factory approach is being used to expand production capacity of the submarine industrial base.

As part of the partnership, Austal USA is constructing and outfitting Command and Control Systems Modules (CCSM) and Electronic Deck Modules (EDM) for the Virginia- and Columbia-class programs. GDEB commenced on-the-job training efforts in April 2022 to provide certification for skilled trades and supervisory positions to ensure consistent work practices and adherence to quality assurance standards....

Work commenced in late November on two tanks for a Virginia class submarine. The first CCSM is scheduled to arrive at Austal USA’s Mobile shipyard in late January 2023 for initial outfitting efforts. The work will support a gradual ramp up to full fabrication and outfitting of CCSMs and EDMs across both submarine classes beginning in 2026.¹¹⁵

Potential Oversight Questions for Congress

Potential oversight questions for Congress include the following:

- What is the total estimated cost of actions needed to increase the capacity of the submarine-construction industrial base to a 1+2 annual production rate? What portion of this cost has been funded through FY2023, and what portion remains to be funded in FY2024 and subsequent years? How much of that remaining cost has been requested for FY2024 itself? What portions of all these costs are to be funded by government, and what portions are to be funded by industry?
- Can the estimated date for achieving a construction rate of 2.0 Virginia-class boats per year be achieved by 2028? Can it be accelerated from 2028 to an earlier year? If so, what additional actions would be necessary, and what is their estimated cost?

¹¹⁴ Megan Eckstein, “Defense Firms Outsource Sub, Carrier Construction amid Labor Woes,” *Defense News*, October 21, 2022.

¹¹⁵ Austal USA, “Austal USA Commences Submarine Work,” December 6, 2022. See also Justin Katz, “Known for LCS, Alabama-Based Austal USA Starts Submarine Work,” *Breaking Defense*, January 19, 2023; Rojoef Manuel, “Austal, General Dynamics Team Up for US Navy Nuclear Submarine Production,” *Defense Post*, December 8, 2022; Rich Abbott, “Austal Starts Submarine Construction Support Work,” *Defense Daily*, December 12, 2022.

- What additional actions would be needed to increase the capacity of the submarine-construction industrial base to a 1+3 annual production rate? What would these actions cost, and when would the 1+3 capacity be attained?
- What impact is the December 21, 2021, presidential determinations relating to the DPA having on the capacity of the submarine construction industrial base to build both Virginia- and Columbia-class submarines? What actions has the determinations made possible that were not previously permitted? What actions are included in the proposed FY2024 budget, and at what cost? What would be the specific effect of these actions, and how long would they take to implement?

Virginia-Class Delivery Delays and Cost Growth

Another potential issue for Congress concerns the delivery delays and cost growth in the Virginia-class program.

June 2023 GAO Report

A June 2023 GAO report—the 2023 edition of GAO’s annual report surveying DOD major acquisition programs—stated the following regarding the Block V version of the Virginia-class design:

Current Status

Performance on VCS construction continues to degrade. The program now estimates construction of each Block V submarine will take an average of over 2 years longer than reported last year. The delays are due to problems meeting original staffing and work efficiency estimates.

Due to delays, program officials are developing a new, more realistic schedule for Block V. They said that they expect to complete this process in early 2023. Program officials stated that the shipbuilders do not have sufficient workforce to complete VCS while also constructing the Columbia class submarines and overhauling several Los Angeles class submarines. They noted VCS construction is about 25 percent below staffing needs as of September 2022.

In an effort to improve VCS construction, shipbuilders are outsourcing certain work that they would have otherwise completed in their shipyards, noted program officials. The officials told us that the shipbuilders implemented these changes due to shipbuilders’ workforce constraints and the limited physical capacity of some facilities.

The same factors that delayed the schedule also contributed to cost increases. While the fixed price incentive contract set target and ceiling prices for each submarine, program officials reported that the VCS shipbuilders have not met the work efficiency and material cost estimates that informed the target pricing. Consequently, the Navy plans to request more funds to complete Block V, as its prior budget requests covered the target prices, but not up to the ceiling prices.

Program Office Comments

We provided a draft of this assessment to the program office for review and comment. The program office provided technical comments, which we incorporated where appropriate. According to the program office, it remains challenged to meet a two ship per year construction rate. It also stated that the Navy is working with shipbuilders and investing in

the submarine industrial base to address challenges, such as supply chain issues and workforce skills gaps, and to improve production capacity through strategic outsourcing.¹¹⁶

Press Reports

A May 8, 2023, press report stated

Availability of parts, not people, is the largest barrier right now to catch up with the delays in constructing Virginia-class nuclear attack boats, company officials at submarine builder Newport News Shipbuilding told USNI News....

While work stoppages and worker attrition due to the COVID-19 pandemic have been cited as reasons for the delay in submarine production, availability of parts and materials has become the primary reason for delays, Newport News president Jennifer Boykin told USNI News on Friday [May 5].

“COVID had an impact because we had such a large percent of the workforce that wasn’t here during the six months in 2020. Many of our suppliers, if not most, were struggling with some of the same issues. Many of our suppliers got off track because they didn’t have [the] workforce,” she said on Friday, a day ahead of the christening of Massachusetts (SSN-798).

“Post COVID, not as many people came back ... Most of our suppliers are really working, doing what they can to increase their workforce pipeline.”

While Newport News is doing well with the workforce for the moment, its suppliers are dealing with their own workforce issues that have increased the time it takes for parts to get to the yard.

Workforce and supply chain concerns have prompted the Navy, HII and General Dynamics Electric Boat to retool the schedule for the Block V Virginia-class.

“The intent was to incorporate some of these challenges,” Boykin said.¹¹⁷

A March 29, 2023, press report stated

Production of the Navy’s first-in-class Columbia-class ballistic missile submarine—District of Columbia (SSBN-826)—is 10 percent behind schedule, Secretary of the Navy Carlos Del Toro told a House panel on Wednesday [March 29].

Likewise, the production of Virginia-class attack boats is slowly improving but is “significantly behind” the target of two submarines per year, Del Toro told the House Appropriations defense subcommittee during a hearing.

Del Toro’s assessment was in response to questions from subcommittee chair Rep. Ken Calvert (R-Calif.), who cited a January Government Accountability Office study that warned the Navy did not have a clear understanding of the program’s schedule risks. Del Toro contested the finding from GAO.

“We do have clear visibility into the schedule challenges that Columbia faces. She’s currently about 10 percent behind schedule is what she is given the challenges that we’ve faced with COVID and supply chain, not being able to get the advanced procurements that are necessary to be able to fulfill those requirements leads to her being 10 percent behind,” Del Toro told Calvert.

¹¹⁶ Government Accountability Office, *Weapon Systems Annual Assessment[:] Programs Are Not Consistently Implementing Practices That Can Help Accelerate Acquisitions*, GAO-23-106059, June 2023, p. 165.

¹¹⁷ Sam LaGrone, “Submarine Supply Chain Largest Barrier to Improving Virginia Attack Sub Schedule, Says Boykin,” *USNI News*, May 8, 2023.

“The shortage of workers in the submarine community and across the nation is obviously a national challenge that we all have to address collectively. I do believe that increasing legal immigration in this country will help the blue-collar workforce, including those top workers that we need actually in the submarine force as well. ... We are working very closely with industry to try to close these gaps.”

Following an earlier version of this post, a Navy official clarified to USNI News the estimate to which Del Toro was referring was an internal General Dynamics Electric Boat schedule 74-month schedule that was shorter than the Navy’s contract schedule....

“On the Virginia side of the house ... they are significantly behind. They should be at two boats per year. They’re currently [at] around 1.4. They have made some progress in moving in [the right] direction. I’m concerned particularly about the construction of the sterns and bows in Virginia and getting those up to Electric Boat up in Connecticut and integrating them all,” Del Toro said.

“We are holding industry accountable in every which way that we possibly can and working with them at the same time to try to close these gaps.”¹¹⁸

A March 6, 2023, press report stated

Electric Boat hired 3,700 shipbuilders last year. It wants to hire more than 5,000 this year and just as many every year for decades into the future.

Last spring, it hired a fifth of UConn’s engineering grads. At the other end of the education pipeline, it is promoting shipbuilding careers in elementary schools, setting its sights on second graders who will join the workforce when EB hopes to hit its peak employment target in 10 years.

“My first words to you this morning,” President Kevin Graney deadpanned last week to a roomful of political, government and military officials at a breakfast meeting at the Mystic Marriott. “EB is hiring.”

The nation’s foremost builder of submarines is, Graney said, in the midst of a “once in generation expansion,” producing for its principal customer, the U.S. Navy, the ships that will form the front line in a scramble by the U.S. and its allies to catch up with and contain Chinese expansionism.

But one of the challenges emerging from a new shipbuilding boom is a shortage of shipbuilders....

As [submarine] construction gears up, there is concern over whether Electric Boat—and the thousands of other manufacturers in the supply chain known as the submarine industrial base—can hire and begin production quickly enough to meet the aggressive construction and delivery schedule on which the Navy says U.S. security depends....

By scouring the northeast for tradesmen and engineers, Electric Boat says it is meeting and will continue to meet the Navy’s ambitious delivery schedule of two Virginia and one Columbia class submarines a year....

Electric Boat said it is meeting the delivery schedule and will continue to do so, although there was a slippage in the Virginia work after a portion of its tight workforce was shifted to the Columbia program when the Navy designated that as the nation’s top defense priority.¹¹⁹

¹¹⁸ Sam LaGrone, “SECNAV Del Toro: Virginia Attack Sub Construction ‘Significantly Behind,’ District of Columbia Submarine 10% Behind Schedule,” *USNI News*, March 29 (updated March 30), 2023. See also Rich Abott, “SECNAV: Columbia Sub 10 Percent Behind, Virginia Subs Improving But Still Behind,” *Defense Daily*, March 30, 2023.

¹¹⁹ Edmund H. Mahony, “CT’s Electric Boat Looking to Hire 5,000 More Employees Amidst ‘Once in Generation Expansion,’” *Hartford Courant*, March 6, 2023.

A February 9, 2023, press report stated

The Virginia-class submarine production line at Newport News Shipbuilding is now fully staffed, after taking a back seat to the preeminent Columbia-class submarine program for years.

A larger workforce is one of several factors that give the company confidence the remaining Block IV Virginia boats will be delivered on their new schedule. The vessels were bought at a pace of two a year and were meant to deliver at the same rate. However, they are only arriving at a rate of about 1.2 boats annually, several U.S. Navy officials recently said.

In fact, Newport News Shipbuilding and General Dynamics Electric Boat, which co-build all the submarines, did not deliver a single sub to the Navy from April 2020 to February 2022.

The boats were already behind schedule when the COVID-19 pandemic exacerbated the issue. As the two submarine construction yards—Newport News Shipbuilding in Virginia and Electric Boat in Connecticut—ramped up the size of their workforce in anticipation of a greater workload, they had to ensure the Columbia production line was fully staffed and remained on schedule.

Any shortfalls, then, fell on the Virginia program.

“We’re fully staffed on Block IV and Columbia, and we’re working very hard on execution there,” the CEO of HII, Chris Kastner, said Feb. 9 on an earnings call.¹²⁰

A January 31, 2023, press report stated

The U.S. Navy and its suppliers have thousands of open jobs at government repair yards and in the private shipbuilding and ship repair industrial base, as hiring and retaining skilled workers has become “our No. 1 strategic challenge across the enterprise,” according to the head of Naval Sea Systems Command.

Vice Adm. Bill Galinis said Monday government and industry are competing against each other for a undersized pool of talent in both trades and white-collar specialties....

Matt Sermon, the executive director for the Program Executive Office for Strategic Submarines, noted at the same conference a recent analysis showed the submarine industrial base will need to hire 100,000 people over the next 10 years for submarine construction alone, at the two main shipyards as well as their 17,000 vendors. This would cover the workforce needed to build one Columbia-class ballistic missile submarine and two Virginia-class attack submarines each year.¹²¹

Additional Virginia-Class Issues

Maintenance Requirements and Operational Availability

Another issue for Congress concerns the maintenance requirements and operational availability of Virginia-class boats. A September 22, 2022, press report states

¹²⁰ Megan Eckstein, “Newport News Has Fully Staffed Attack Sub Line, After Years Of Delays,” *Defense News*, February 9, 2023.

¹²¹ Megan Eckstein, “Workforce Woes Are Top ‘Strategic Challenge’ for Navy, Admiral Says,” *Defense News*, January 31, 2023. See also Rich Abott, “Navy Official Describes 100,000-Person Submarine Workforce Challenges,” *Defense Daily*, January 31, 2023; Nick Wilson, “Navy Officials Highlight Labor Shortages, Other Key Challenges for Submarine Production And Maintenance,” *Inside Defense*, January 31, 2023.

With its Virginia class of attack submarines suffering from maintenance woes and low operational availability, the U.S. Navy is working to ensure its next attack submarine is easier to sustain, according to the program executive officer [PEO] for attack submarines....

[On September 21, at the American Society of Naval Engineers' annual Fleet Maintenance and Modernization Symposium, Rear Admiral Jonathan] Rucker said PEO Attack Submarines is revisiting the maintenance plan for these Virginia SSNs in the hopes of improving sustainment and that the Navy must take a better approach while designing the SSN(X) next-generation attack submarine to ensure high operational availability and easier sustainment throughout the lifecycle.

Coming off of the Cold War-era Seawolf-class submarine, designed to be fast, lethal and stealthy, the Navy took a different approach with the Virginia class, Rucker said, and opted to “build a submarine for an affordable cost to ensure we could get the numbers we needed.”

“I’m not going to say that sustainment came as an afterthought but, to be honest, it was ... a challenge we’ll deal with later,” he added. “Unfortunately, some of that challenge is here today.”

At the same conference, Rear Adm. Scott Brown, who oversees maintenance at the Navy’s four public shipyards, said the service didn’t make the required upfront investments when designing and acquiring the Virginia class, meaning shipyard workers today reach for parts and components and find they’re not there.

“It’s resulting in a lot of churn, a lot of cannibalization—so we have to take things off other boats to stick them on the boat we’re trying to get out—and a lot of, frankly, frustration with the workforce on waiting for stuff that doesn’t exist,” Brown said. “Of course, that leads to delays.”

Rucker said the Navy must ensure that doesn’t happen with future [submarine] classes.

... Rucker, who previously served as program manager for the Columbia class, said the Navy designed the ship [i.e., the Columbia class submarine] with maintenance in mind, even bringing in ship maintainers for their input on potential issues such as access and rigging points.

Maintenance is also a focus for the SSN(X) [next-generation attack submarine] program,¹²² he said.

“There are things we’ve already learned on Virginia: of the over a million parts, less than 0.1% of the design is not doing what we thought it would from [a life expectancy perspective]. It’s 32 items, to be exact,” Rucker said. “We’ve already figured out what those were, we redesigned them or changed the maintenance cycle.”

Those improved parts could be used on SSN(X).

Rucker said the SSN(X) design phase prioritizes this focus on maintenance. The program’s initial capabilities document lays out four top-level requirements: speed, stealth, payloads, and operational availability.¹²³

A September 21, 2022, press report stated

The earliest Virginia-class boats are among the hardest submarines to repair on time.

¹²² For more on the SSN(X) program, see CRS In Focus IF11826, *Navy Next-Generation Attack Submarine (SSN[X]) Program: Background and Issues for Congress*, by Ronald O'Rourke.

¹²³ Megan Eckstein, “Next-Generation Attack Subs Will Be Designed with Maintenance in Mind,” *Defense News*, September 22, 2022.

“We’ve seen a significant growth in the amount of man days required in submarine availabilities, particularly in the Virginia class,” [Vice Admiral William] Galinis [the commander of the Naval Sea Systems Command] said.

“We’re doing a deep dive to figure out why that is. It’s really a continuous process.”...

The Virginias were designed to operate closer to shore and with components that met rigorous NAVSEA standards for submarine safety, but were not as durable as some of the older components on the Los Angeles-class boats.

“When we came off the Sea Wolf-class we had an extremely capable but relevantly more expensive submarine,” [Rear Admiral Jonathan] Rucker said.

“Where we were in the beginning of the Virginia class, we had a charge early on to build a design and build a submarine for an affordable cost to make sure we got the numbers we needed.”

Sustainment of the submarine class wasn’t a major requirement for the program and the Navy pushed maintenance aside for other cost saving considerations.

“Unfortunately, some of those challenges are here today,” Rucker said.

USS Virginia (SSN-774), commissioned in 2004, is wrapping up a mid-life availability and lessons from that repair and other early boats in the class are informing a class-wide maintenance plan to assist with scheduling and securing materials.

That Navy will implement that plan starting in Fiscal Year 2023 and may not see improvements until FY 2024.

“If you throw a rudder over on the Titanic, it takes a while for the ship to turn,” Rucker told USNI News.

“It’s going to take a little bit of time, just because there’s a lag and getting the resources or changing behavior or ensuring that we plan better for what we’re going to do.”

In the long term, the lessons from the Virginia-class sustainment issue have informed how the Navy planned for repairing and maintaining the Columbia-class ballistic missile submarines and the next-generation attack submarine SSN(X), Rucker said.¹²⁴

Shortage of Spare Parts for Boats Undergoing Maintenance

A related issue for Congress concerns a shortage of spare parts for existing Virginia-class boats undergoing maintenance. A June 21, 2021, press report states

The U.S. Navy has swapped more than 1,600 parts among its new Virginia-class submarines since 2013 to ease maintenance bottlenecks as components that are supposed to last 33 years wear out decades sooner.

Parts are being shuttled regularly among the nuclear-powered fast-attack submarines so that vessels in the \$166 billion class built by General Dynamics Corp. and Huntington Ingalls Industries Inc. can return to operations, according to data from the Naval Sea Systems Command and the Congressional Budget Office¹²⁵....

If a part isn’t available for a sub that’s finishing refurbishment, shipyard maintenance workers may be forced to borrow, or “cannibalize,” one from a submarine entering

¹²⁴ Sam LaGrone, “NAVSEA: Navy ‘Struggling’ to Get Attack Subs Out of Repairs on Time as Demand Increases,” *USNI News*, September 21, 2022. See also Audrey Decker, “Navy Still ‘Really Struggling’ with On-Time Maintenance for Virginia,” *Inside Defense*, September 21, 2022.

¹²⁵ This is a reference to a recent CBO report: Congressional Budget Office, *The Capacity of the Navy’s Shipyards to Maintain Its Submarines*, March 2021, 21 pp.

maintenance in order to reduce delays. Most cannibalized parts are for non-propulsion electronic systems, but the Navy declined to specify which ones are affected, citing operational security.

The number of swapped parts for the submarines, which began entering service in 2004, increased from 100 in 2013 to 171 in 2016, 201 in 2018 and 452 in 2019 before declining to 318 last year. The Navy projects the number will drop to 82 between this year and next....

The big disadvantage of cannibalizing parts from one submarine to another is the extra workload involved, according to the Congressional Budget Office, as well as the risk that a part might be damaged during the extra steps. The Navy doesn't know how much the swaps add to workload, saying that at this point "there is limited range and depth of data."...

Some parts identified to last 33 years based on engineering analysis and testing, "were subject to degradation" such as "corrosion caused by complex galvanic interactions," or when two dissimilar metals or electrical parts come in contact for an extended period of time, "that had not been predicted in some operating environments," the Navy said....

The Navy's submarine leaders are "not satisfied with any material cannibalization that limits our submarine fleet's ability to respond to national tasking and is taking all steps necessary to avoid these scenarios," the command said. It said it is ordering parts earlier to "reduce material work stoppages and maintenance delays awaiting components."

According to the Navy, 70% of the part swaps were between Block I subs that first entered service in 2004 and Block II vessels initially delivered in 2008.

Flaws in contractor quality and parts that were out of specification "contribute to a small percentage" of premature parts wear, the Navy said.¹²⁶

Substandard Steel

Another issue for Congress concerns substandard steel used for building Navy submarines between 1985 and 2017, a problem that investigators discovered in 2017 and that was first reported in 2020.¹²⁷

Problem with Hull Coating

Another issue for Congress concerns a problem with the hull coating used on Virginia-class boats that was first reported years ago, and then again 2017¹²⁸ and 2019.¹²⁹

¹²⁶ Anthony Capaccio, "U.S. Navy's Deadliest New Sub Is Hobbled over Spare Parts," *Bloomberg*, June 21, 2021.

¹²⁷ For press reports on this issue, see, for example, Gene Johnson, "Metallurgist Gets 2.5 Years for Faking Tests on Sub Parts," *Associated Press*, February 14, 2022; Gene Johnson (Associated Press), "Feds Say Company Provided Subpar Steel for US Navy Subs," *Defense News*, June 15, 2020; Sam LaGrone, "Navy Has 'Mitigated' Risk of Suspect Steel From Company in Federal Fraud Case," *USNI News*, June 19, 2020; Julia Bergman, "Submarine Supplier Mishaps Lead to Call for Hearing," *New London Day*, June 16 (updated June 17), 2020; Gene Johnson, "Metallurgist Admits Faking Steel-Test Results for Navy Subs," *Associated Press*, November 8, 2021; Agence France-Presse, "US Navy Boosts Monitoring of Subs After Falsified Steel Tests," *France 24*, November 10, 2021; Geoff Ziezulewicz, "Navy Says It Ensured Sub Safety After Fake Strength Tests Surfaced, But Won't Detail How," *Defense News, Navy Times*, January 6, 2022.

¹²⁸ See William Cole, "Navy Subs Still Show Issue with Stealth Coating," *Military.com*, March 6, 2017.

¹²⁹ See James Clark, "Whistleblower Accuses Largest US Military Shipbuilder of Putting 'American Lives at Risk' by Falsifying Tests on Submarine Stealth Coating," *Task & Purpose*, October 3, 2019.

Defective Parts

Another issue for Congress concerns three Virginia-class boats that were reported in 2016 to have been built with defective parts.¹³⁰

Legislative Activity Regarding FY2024 Funding Request

Congressional Action on FY2024 Funding Request

Virginia-Class Procurement Funding Requested in FY2024 Budget Submission

The Navy's proposed budget requests the procurement of the 39th and 40th Virginia-class boats. The two boats have an estimated combined procurement cost of \$9,427.6 million (i.e., about \$9.4 billion). The two boats have received a combined total of \$2,297.7 million in prior-year advance procurement (AP) funding, and the Navy's proposed FY2024 budget requests the remaining \$7,130.0 million needed to complete their estimated combined procurement cost. The Navy's proposed FY2024 budget also requests \$1,855.5 million in AP funding for Virginia-class boats to be procured in future fiscal years, \$1,360.0 million in Economic Order Quantity (EOQ) funding, which is an additional kind of AP funding that can occur under an MYP contract, and \$168.2 million in cost-to-complete (CTC) funding to cover cost growth on Virginia-class boats procured in prior years, bringing the total amount of procurement, AP, EOQ, and CTC funding requested for FY2024 to \$10,513.7 million (i.e., about \$10.5 billion).

As noted earlier, as part of its FY2024 budget submission, the Navy has requested authority for a Virginia-class MYP contract that would begin in FY2025.¹³¹

Supplemental Funding for Submarine Industrial Base Requested on October 20, 2023

In addition to the above requested funds, on October 20, 2023, the Administration submitted a request for FY2024 emergency supplemental funding for national security priorities that includes, among other things, a total of \$3,393.2 million (i.e., about \$3.4 billion) in funding for the submarine industrial base to support construction of new submarines and maintenance of existing submarines, as follows:

¹³⁰ For press reports on this issue, see, for example, David Larter, "Secret Weld: How Shoddy Parts Disabled A \$2.7 Billion Submarine," *Navy Times*, March 28, 2016; Sydney J. Freedberg Jr., "Welding Problems Fixed For Virginia Subs; Carter Tours Electric Boat," *Breaking Defense*, May 24, 2016; and David Larter, "Attack Sub Minnesota Rejoins Fleet After Parts Fiasco," *Navy Times*, June 4, 2016.

¹³¹ As noted earlier, the Navy typically requests authority for an MYP contract for the Virginia-class program one year in advance of the proposed start of the MYP contract. The Navy states that "if the MYP [proposed to begin in FY2025] is not approved in FY 2024, the Navy would lose EOQ savings across the procurement and the long-term shipbuilder and vendor base stability achieved with an MYP authority. If an MYP is not authorized for the next Block of VCS submarines, the Navy may have to enter a single ship procurement contract for FY 2025 ships forcing industry to assume greater risk and raise prices." (Source: "Twelfth Package of Legislative Proposals Sent to Congress for Inclusion in the National Defense Authorization Act for Fiscal Year 2024 – Individual Proposals (Sent to Congress on May 18, 2023)," posted at <https://ogc.osd.mil/OGC-Offices/Office-of-Legislative-Counsel/DoD-Legislative-Proposals-2024/>.) See also Nick Wilson, "Citing Essential Cost Savings, DOD Seeks Multiyear Authority for Block VI Virginia Submarines," *Inside Defense*, May 19, 2023.

- \$557.758 million in the Operation and Maintenance, Navy (OMN) appropriation account for improvements at the four government-operated naval shipyards (NSYs) that maintain the Navy’s nuclear-powered ships, including the Navy’s submarines;
- \$2,055.0 million in the Shipbuilding and Conversion, Navy (SCN) appropriation account (i.e., the Navy’s shipbuilding account) to increase production rates and submarine availability through initiatives in supplier development, shipbuilder and supplier infrastructure, workforce development, technology advancements, and strategic sourcing;
- \$393.57 million in the Other Procurement, Navy (OPN) appropriation account to increase production rates and submarine availability through initiatives in supplier development, shipbuilder and supplier infrastructure, workforce development, technology advancements, and strategic sourcing;
- \$7.0 million in the Research, Development, Test and Evaluation, Navy (RDTE) appropriation account to increase production rates and submarine availability through initiatives in supplier development, shipbuilder and supplier infrastructure, workforce development, technology advancements, and strategic sourcing;
- \$281.914 million in the Military Construction (MilCon), Navy and Marine Corps appropriation account to support infrastructure work at the NSYs to improve the ability to maintain the readiness of the fleet; and
- \$98.0 million in the National Nuclear Security Administration (NNSA) of the Department of Energy (DOE) for Naval Reactors (i.e., the Naval Nuclear Propulsion Program) to support hiring and infrastructure expansion at the Government-Owned, Contractor-Operated Naval Nuclear Laboratory sites in order to meet growing mission demands to provide the trilateral security partnership between Australia, United Kingdom, and United States (i.e., AUKUS) with nuclear propulsion plants.¹³²

Table 4 summarizes congressional action on the Navy’s FY2024 budget funding request for the procurement of Virginia-class boats in FY2024 and subsequent years.

¹³² Source: Attachment 4: Submarine Industrial Base (pages 58-63) to letter dated October 20, 2023, from Shalanda D. Young, Office of Management and Budget, to The Honorable Patrick McHenry, Speaker Pro Tempore of the House of Representatives, accessed October 23, 2023, at <https://www.whitehouse.gov/wp-content/uploads/2023/10/Letter-regarding-critical-national-security-funding-needs-for-FY-2024.pdf>.

Table 4. Congressional Action on FY2024 Funding Request

Millions of dollars, rounded to nearest tenth

	Request	Authorization			Appropriation		
		HASC	SASC	Final	HAC	SAC	Final
FY2024 Procurement Funding Request for Virginia-Class Program (all in SCN account)							
Procurement	7,130.0	7,130.0	7,130.0	7,130.0	7,130.0	7,130.0	
Advance procurement (AP)	3,215.5	2,890.4	3,215.5	3,215.5	3,215.5	3,158.8	
(Quantity)	(2)	(2)	(2)	(2)	(2)	(2)	
Cost-to-complete	168.2	168.2	168.2	168.2	168.2	168.2	
Total Virginia-class	10,513.7	10,188.6	10,513.7	10,513.7	10,513.7	10,457.0	
Emergency Supplemental Funding for Submarine Industrial Base (SIB) Requested on October 23, 2023

Total SIB	3,393.2	n/a	n/a			3,295.2	

Sources: Table prepared by CRS based on Navy’s original FY2024 budget submission, committee and conference reports, and explanatory statements on FY2024 National Defense Authorization Act and FY2024 DOD Appropriations Act. Figures may not add due to rounding.

Notes: HASC is House Armed Services Committee, SASC is Senate Armed Services Committee, SAC is Senate Appropriations Committee, HAC is House Appropriations Committee. Advance procurement funding includes both “regular” AP funding and Economic Order Quantity (EOQ) funding for multiyear procurement (MYP). SCN is Shipbuilding and Conversion, Navy; OMN is Operation and Maintenance, Navy; OPN is Other Procurement, Navy; RD TEN is Research, Development, Test and Evaluation, Navy; MilCon is Military Construction, Navy and Marine Corps; DOE NNSA for NR is Department of Energy National Nuclear Security Administration for Naval Reactors (i.e., the Naval Nuclear Propulsion Program). n/a is not applicable—the House and Senate versions of the FY2024 National Defense Authorization Act (NDAA) were reported prior to the submission of the emergency supplemental funding request on October 20, 2023.

FY2024 National Defense Authorization Act (H.R. 2670/S. 2226)

House

The House Armed Services Committee, in its report (H.Rept. 118-125 of June 30, 2023) on H.R. 2670, recommends the funding levels shown in the HASC column of **Table 4**. The recommended reduction of \$325.1 million in advance procurement (AP) funding is for “early to need.” (Page 445)

Section 131 of the bill would provide authority for a multiyear procurement (MYP) contract for not more than 13 Virginia-class submarines.

Section 344 would modify a requirement for a briefing on the Shipyard Infrastructure Optimization Plan (SIOP) and require a briefing on the implementation status of the SIOP.

Section 1024 would require quarterly briefings on SSN maintenance.

H.Rept. 118-125 states

Public Naval Shipyards

The committee recognizes the importance of the four naval public shipyards and is encouraged by the ongoing work as part of the Shipyard Infrastructure Optimization Program (SIOP). The committee encourages the Secretary of the Navy to ensure SIOP projects remain on schedule and to identify additional opportunities for enhanced capabilities for increased throughput at the public shipyards. (Page 124)

Senate

The Senate Armed Services Committee, in its report (S.Rept. 118-58 of July 12, 2023) on S. 2226, recommended the funding levels shown in the SASC column of **Table 4**. S.Rept. 118-58 states

Virginia Class Material Strategy.—The Committee remains concerned with persistent delays in submarine repair maintenance activities that reduce operational availabilities of submarines. The Committee notes that the availability of VIRGINIA Class submarine [VCS] materials have been a significant driver of maintenance delays. Therefore, the Committee supports the fiscal year 2024 President’s budget request of \$470,000,000 for the procurement of VCS spares and repair parts in support of the Navy’s revised VCS material strategy. In order to facilitate appropriate congressional oversight of this novel approach, the Committee directs the Secretary of the Navy not later than 90 days after the enactment of this act, and quarterly thereafter, to brief the congressional defense committees on the Navy’s VCS materials strategy. The briefing shall include (1) updates on the implementation of the strategy; (2) plans for the obligation of funding appropriated for VCS spares and repair parts; (3) an assessment of the health of the defense industrial base for VCS materials; and (4) an updated analysis of estimated cost savings and reductions in availability delays resulting from the Navy’s strategy. The Committee encourages the Secretary of the Navy to use predictive modeling and make adjustments to the budget development process and procurement lead times of VCS materials to improve material readiness. (Pages 146-147)

Section 123 of the bill provides authority for a multiyear procurement (MYP) contract for 10 Virginia-class submarines.

Conference

The conference report (H.Rept. 118-301 of December 6, 2023) on H.R. 2670 recommended the funding levels shown in the authorization final column of **Table 4**.

Section 123 of H.R. 2670 provides authority for an MYP contract for not more than 13 Virginia-class submarines.

Section 344 modifies a requirement for the Navy to provide briefings on the Shipyard Infrastructure Optimization Program (SIOP).

Section 350 directs the Navy, in coordination with the SIOP, to develop and implement a strategy to leverage commercial best practices used in shipyards to improve the efficiency of operations and to demonstrate a digital platform that uses artificial intelligence to analyze data on the maintenance and condition of shipboard assets of the Navy at shipyards, for the purpose of improving the readiness of the Armed Forces, predicting and diagnosing issues prior to the occurrence of such issues, and lowering maintenance costs. It also directs the Navy to conduct an assessment of the costs of maintenance delays on shipboard assets of the Navy and the potential

cost savings of adopting artificial intelligence predictive maintenance technologies to assist in the determination of the condition of in-service equipment and estimate when maintenance should be performed prior to failure or end of life of such equipment. It also directs the Navy to provide a briefing on these matters.

Section 1024 directs the Navy to provide biannual (once every 180 days) briefings on submarine maintenance and readiness that are to include, among other things, discussions of ongoing SIOP efforts, lessons learned from other Navy programs, and recommendations for legislative changes required with respect to policies or resources to ensure efficient and effective maintenance and operational readiness for the submarine enterprise.

FY2024 DOD Appropriations Act (H.R. 4365/S. 2587)

House

The House Appropriations Committee, in its report (H.Rept. 118-121 of June 27, 2023) on H.R. 4365, recommends the funding levels shown in the HAC column of **Table 4**.

Section 8010 of the bill would provide authority for a multiyear procurement (MYP) contract for Virginia-class submarines.

Senate

The Senate Appropriations Committee, in its report (S.Rept. 118-81 of July 27, 2023) on S. 2587, recommended the funding levels shown in the SAC column of **Table 4**. The recommended reduction of \$56.757 million in advance procurement (AP) funding is for “Long Lead Time CFE [contractor-furnished equipment] Two Year AP prior year execution delays.” (Page 135)

Section 8010 of the bill would provide authority for a multiyear procurement (MYP) contract for 10 Virginia-class submarines and government-furnished equipment (GFE).

S.Rept. 118-81 states

Submarine Construction Performance.—The Committee continues to be concerned by VIRGINIA Class Submarine [VCS] construction cost and schedule performance which impact not only the construction and delivery to the fleet of VCS, but also affect the COLUMBIA Class Submarine [COL] construction schedule. The Committee notes that the fiscal year 2024 President’s budget request includes funds for cost overruns of VCSs procured in fiscal years 2015, 2016, and 2017, and that cost overruns on additional ongoing new VCS construction programs are expected to exceed \$3,000,000,000 in future years. The Secretary of the Navy is directed to submit to the congressional defense committees the most current cost and schedule estimates, by VCS and COL, with the submission of each annual President’s budget request until delivery of the twelfth and final COLUMBIA hull. The report shall identify changes from the previous year, and include detailed explanations for all submarines not fully resourced to the Navy’s cost estimate, as well as all projected cost-to-complete requirements for previously appropriated submarines. (Page 137)

Emergency National Security Supplemental Appropriations Act, 2024 (H.R. 815)

Senate

H.R. 815 was introduced in the House on February 2, 2023, and agreed to in the House by voice vote on March 7, 2023, as the Removing Extraneous Loopholes Insuring Every Veteran Emergency Act (aka RELIEVE Act).

Under Senate Amendment 1386 to H.R. 815, an amendment in the nature of a substitute that was released on February 4, 2024, H.R. 815 would become the Emergency National Security Supplemental Appropriations Act, 2024. The Senate amendment to H.R. 815 would provide the supplemental funding amounts shown in the SAC column of the lower part of **Table 4**. Compared to the originally requested supplemental amounts, the amounts that would be provided by the Senate amendment to H.R. 815 would in effect transfer \$100 million in requested supplemental funding from the Other Procurement, Navy (OPN) account to the Shipbuilding and Conversion, Navy (SCN) account. The text of Senate amendment to H.R. 815 does not include funding that would be specifically appropriated for the Department of Energy (DOE) National Nuclear Security Administration (NNSA) for Naval Reactors (NR) in support of AUKUS Pillar 1.

Legislative Activity Regarding Proposed Sale of Virginia-Class Boats Under AUKUS Agreement¹³³

May 2023 DOD Legislative Package Relating to AUKUS Agreement

On May 2, 2023, DOD sent to Congress its eighth package of legislative proposals requested for inclusion in the FY2024 National Defense Authorization Act (NDAA). The package included the following requested measures relating to the SSN part of the AUKUS agreement:

SEC. ____ . ACCEPTANCE OF CONTRIBUTIONS IN SUPPORT OF AUSTRALIA, UNITED KINGDOM, AND UNITED STATES SUBMARINE SECURITY ACTIVITIES.

Chapter 155 of title 10, United States Code, is amended by inserting after section 2608 the following new section:

“§ 2609. Acceptance of contributions for Australia, United Kingdom, and United States submarine security activities; Submarine Security Activities Account

“(a) ACCEPTANCE AUTHORITY.—The Secretary of Defense may accept from the Government of Australia contributions of money made by the Government of Australia for use by the Department of Defense in support of non-nuclear related aspects of submarine security activities between Australia, the United Kingdom, and the United States (in this section referred to as ‘AUKUS’).

“(b) ESTABLISHMENT OF SUBMARINE SECURITY ACTIVITIES ACCOUNT.—(1) There is established in the Treasury of the United States a special account to be known as the ‘Submarine Security Activities Account’.

¹³³ Legislation shown in this section includes bills listed in Congress.gov as of August 15, 2023, that contain the term *AUKUS* and relate at least in part to Pillar 1 of AUKUS.

“(2) Contributions of money accepted by the Secretary of Defense under subsection (a) shall be credited to the Submarine Security Activities Account.

“(c) USE OF THE SUBMARINE SECURITY ACTIVITIES ACCOUNT.—(1) The Secretary of Defense may use funds in the Submarine Security Activities Account—

“(A) for any purpose authorized by law that the Secretary determines would support AUKUS submarine security activities; or

“(B) to carry out a military construction project that is consistent with the purposes for which the contributions were made and is not otherwise authorized by law.

“(2) Funds in the Submarine Security Activities Account may be used as described in this subsection without further specific authorization in law.

“(d) TRANSFERS OF FUNDS.—(1) In carrying out subsection (c), the Secretary of Defense may transfer funds available in the Submarine Security Activities Account to appropriations available to the Department of Defense.

“(2) In carrying out subsection (c), and in accordance with the Atomic Energy Act of 1954 (42 U.S.C. 2011 et seq.), the Secretary of Defense may transfer funds available in the Submarine Security Activities Account to appropriations or funds of the Department of Energy available to carry out activities related to AUKUS submarine security activities.

“(3) Funds transferred under this subsection shall be available for obligation for the same time period and for the same purpose as the appropriation to which transferred.

“(4) Upon a determination by the Secretary that all or part of the funds transferred from the Submarine Security Activities Account are not necessary for the purposes for which such funds were transferred, all or such part of such funds shall be transferred back to the Submarine Security Activities Account.

“(e) INVESTMENT OF MONEY.—(1) Upon request by the Secretary of Defense, the Secretary of the Treasury may invest money in the Submarine Security Activities Account in securities of the United States or in securities guaranteed as to principal and interest by the United States.

“(2) Any interest or other income that accrues from investment in securities referred to in paragraph (1) shall be deposited to the credit of the Submarine Security Activities Account.

“(f) RELATIONSHIP TO OTHER LAWS.—The authority to accept or transfer funds under this section is in addition to any other authority to accept or transfer funds.”.

—

SEC. ____ . AUSTRALIA, UNITED KINGDOM, AND UNITED STATES SUBMARINE SECURITY ACTIVITIES.

(a) AUTHORIZATION TO TRANSFER SUBMARINES.—

(1) IN GENERAL.—Subject to paragraph (6), the President may transfer not more than two Virginia class submarines from the inventory of the Navy to the Government of Australia on a sale basis under section 21 of the Arms Export Control Act (22 U.S.C. 2761).

(2) COSTS OF TRANSFER.—Any expense incurred by the United States in connection with the transfer authorized by this subsection shall be charged to the Government of Australia.

(3) WAIVER OF CERTIFICATION REQUIREMENT.—The requirement for the Chief of Naval Operations to make a certification under section 8678 of title 10, United States Code, shall not apply to a transfer under this subsection.

(4) USE OF FUNDS.—The Secretary of the Navy may use the proceeds of a transfer under this subsection—

(A) for the acquisition of vessels to replace the vessels transferred to the Government of Australia; or

(B) to carry out any other authority the use of which the Secretary of the Navy determines would improve the submarine industrial base.

(5) CREDITING OF RECEIPTS.—Notwithstanding any provision of law pertaining to the crediting of amounts received from a sale under the terms of the Arms Export Control Act (22 U.S.C. 2761), any receipt of the United States as a result of a transfer under this section shall—

(A) be credited, at the discretion of the Secretary of the Navy to—

(i) the appropriation, fund, or account used in incurring the original obligation;

(ii) an appropriate appropriation, fund, or account currently available for the purposes for which the expenditures were made; or

(iii) any other appropriation, fund, or account available for the purpose specified in paragraph (4)(B); and

(B) remain available for obligation until expended for the same purpose as the appropriation to which the receipt is credited.

(6) APPLICABILITY OF EXISTING LAW TO TRANSFER OF SPECIAL NUCLEAR MATERIAL AND UTILIZATION FACILITIES FOR MILITARY APPLICATIONS.—

(A) IN GENERAL.—With respect to any special nuclear material for use in utilization facilities or any portion of a vessel transferred under this subsection constituting utilization facilities for military applications under section 91 of the Atomic Energy Act (42 U.S.C. 2121), transfer of such material or such facilities shall only occur in accordance with such section 91.

(B) USE OF FUNDS.—The Secretary of Energy may use proceeds from a transfer described in subparagraph (A) for the acquisition of submarine naval nuclear propulsion plants and the nuclear fuel to replace the propulsion plants and fuel transferred to the Government of Australia.

(b) REPAIR AND REFURBISHMENT OF AUKUS SUBMARINES.—Section 8680 of title 10, United States Code, is amended—

(1) by redesignating subsection (c) as subsection (d); and

(2) by inserting after subsection (b) the following new subsection:

“(c) REPAIR AND REFURBISHMENT OF CERTAIN SUBMARINES.—

“(1) SHIPYARD.—Notwithstanding any other provision of this section, the Secretary of the Navy shall determine the appropriate shipyard in the United States, Australia, or the United Kingdom to perform any repair or refurbishment of a United States submarine involved in submarine security activities between Australia, the United Kingdom, and the United States (in this section referred to as “AUKUS”).

“(2) PERSONNEL.—Repair or refurbishment described in paragraph (1) may be carried out by personnel of the United States, United Kingdom, or Australia in accordance with the international arrangements governing AUKUS submarine security activities.”.

—

SEC. ____ . AUSTRALIA, UNITED KINGDOM, AND UNITED STATES SUBMARINE SECURITY TRAINING.

(a) IN GENERAL.—The President may transfer or authorize export of defense services to the Government of Australia under the Arms Export Control Act (22 U.S.C. 2751 et seq.)

that may also be directly exported to Australian private-sector personnel to support the development of the Australian submarine industrial base necessary for submarine security activities between Australia, the United Kingdom, and the United States (in this section referred to as “AUKUS”), including where such private-sector personnel are not officers, employees, or agents of the Government of Australia.

(b) APPLICATION OF REQUIREMENTS FOR FURTHER TRANSFER.—Any transfer of defense services to the Government of Australia pursuant to subsection (a) to persons other than those directly provided such defense services pursuant to such subsection shall only be made in accordance with the requirements of the Arms Export Control Act (22 U.S.C. 2751 et seq.).¹³⁴

FY2024 National Defense Authorization Act (H.R. 2670/S. 2226)

House

In H.R. 2670 as passed by the House, Section 518 would require a report identifying gaps in the level of staffing necessary to accomplish AUKUS-related efforts in DOD. Section 3132 would require a report that contains a plan to establish a domestic enrichment capability dedicated to solely satisfying DOD requirements for highly enriched uranium (HEU), high-assay low enriched uranium, low enriched uranium, and depleted uranium, with such a report to include, among other things, a description of any changes in the DOD requirement for HEU due to AUKUS. (U.S. and British nuclear-powered warships use HEU in their reactors.)

Senate

Section 1353 of S. 2226 would require DOD to designate a senior DOD civilian official to be responsible for overseeing DOD activities relating to the AUKUS partnership.

The Senate Armed Services committee’s report (S.Rept. 118-58 of July 12, 2023) on S. 2226 states

Public shipyard support for AUKUS

The committee strongly supports the trilateral security agreement between the United States, Australia, and the United Kingdom, known as AUKUS, which presents a unique opportunity to significantly increase security cooperation and enhance collective security with two of our closest allies. Central to the agreement is the initiative to enable Australia to acquire nuclear-powered submarines. The committee notes the importance of ensuring appropriate attention is given to the Australian submarine industrial base, particularly Australian shipyards, to ensure that it is prepared to meet the demands of maintaining these advanced systems. As such, the committee directs the Secretary of Defense and the Secretary of the Navy to provide a report, no later than January 30, 2024, on the Department’s efforts and plans to leverage the expertise of the United States public shipyards, including lessons learned as part of the ongoing Shipyard Infrastructure Optimization Plan [SIOP], to support Australian shipyard improvements and worker training. (Page 268)

See also Bryant Harris and Megan Eckstein, “Pentagon Seeks Authority to Transfer Nuclear Submarines to Australia,” *Defense News*, May 17, 2023; Nick Wilson, “DOD Asks Congress for AUKUS Provisions in FY-24 Defense Authorization Bill,” *Inside Defense*, May 17, 2023.

Conference

In the conference report (H.Rept. 118-301 of December 6, 2023) on H.R. 2670, Sections 1321-1354 address various matters relating to the AUKUS partnership, including the proposed Pillar 1 pathway for submarines, which is covered in particular in Sections 1351-1354, which are referred to collectively as the AUKUS Submarine Transfer Authorization Act.

Sections 1321-1354 of H.R. 2670 collectively address (but not necessarily in the same exact ways) many of the matters addressed by the freestanding bills listed later in this section—the AUKUS Undersea Defense Act (H.R. 3939), the AUKUS Submarine Transfer Authorization Act (H.R. 4619), the Bilateral Resilience in Industry Trade Security Act (BRITS Act) (H.R. 4715), the Keeping our Allies Leading in Advancement Act (KOALA Act) (H.R. 4716), the AUKUS Oversight and Accountability Act (H.R. 4725), and the Truncating Onerous Regulations for Partners and Enhancing Deterrence Operations (TORPEDO) Act of 2023 (S. 1471).

Section 1351 of H.R. 2670 states that Sections 1351-1354 may be referred to as the AUKUS Submarine Transfer Authorization Act.

Section 1352:

- Authorizes, effective one year after enactment of H.R. 2670, the transfer of up to two Virginia-class submarines to Australia on a sale basis, and the transfer of not more than one additional Virginia-class submarine to Australia on a sale basis, during a 20-year period beginning on the date of enactment of H.R. 2670.
- States that these transfers will not be subject to the requirements of Section 36 of the Arms Export Control Act (22 U.S.C. 2776) or 10 U.S.C. 8677 (which requires an authorization by law for the transfer of certain vessels to other countries).
- States that expenses incurred by the United States in connection with the transfers are to be charged to Australia notwithstanding Section 516(e) of the Foreign Assistance Act of 1961 (22 U.S.C. 2321j(e)).
- States that at least 270 days prior to each transfer, the president is to submit a certification that the transfer will not degrade U.S. undersea capabilities, is consistent with U.S. foreign policy and national security interests, and is in furtherance of the AUKUS partnership; that United States is making sufficient submarine production and maintenance investments to meet U.S. military requirements; and that Australia has provided the appropriate funds and support for the additional capacity required to meet the requirements.
- States that the requirement for the Chief of Naval Operations to make a certification under 10 U.S.C. 8678 shall not apply to the transfers. The text of 10 U.S.C. 8678 is as follows:

§8678. Chief of Naval Operations: certification required for disposal of combatant vessels

Notwithstanding any other provision of law, no combatant vessel of the Navy may be sold, transferred, or otherwise disposed of unless the Chief of Naval Operations certifies that it is not essential to the defense of the United States.

- States that the submarine transfers may not occur unless United States and Australia have entered into a mutual defense agreement that provides a clear legal framework for the sole purpose of Australia’s acquisition of conventionally armed, nuclear-powered submarines, and that meets the highest nonproliferation

- standards for the exchange of nuclear materials, technology, equipment, and information between the United States and Australia.
- States that the transfer of any Virginia-class submarine beyond the three such submarines authorized above may occur only if such transfer is explicitly authorized pursuant to a law enacted after the date of enactment of H.R. 2670.
 - Sets forth procedures for crediting receipts received from the sales of Virginia-class boats.
 - Requires a notification at least 30 days prior to the first submarine transfer that Australia has met certain requirements for supporting U.S. and UK submarines rotationally deployed to Australia under the Submarine Rotational Forces-West effort, and for operating its own Virginia-class submarines.
 - Sets forth the legal framework for any special nuclear materials for use in utilization facilities or any portion of a transferred submarine.
 - Amends 10 U.S.C. 8680 to permit, under certain conditions, a public or private shipyard in the United States, Australia, or the UK to perform any repair or refurbishment of a U.S. submarine that is involved in submarine security activities between the three AUKUS partners.
 - Authorizes the transfer or export to Australia and the UK, including private and public-sector Australian and UK personnel, of defense services necessary or incidental to support the transfer and operation of a transferred submarine, and requires (with presidential certification) that any transferred or exported defense service be subject to appropriate security controls to ensure that sensitive information is protected from disclosure to persons unauthorized by the United States to receive it.
 - Requires a classified report 180 days after the date of enactment of H.R. 2670, and annually thereafter for 15 years, on the status of the submarine transfers and other matters relating to the implementation of submarine security cooperation between the three AUKUS partners.

Section 1353 authorizes the acceptance of, and sets forth the procedures for holding and using, contributions of money from Australia relating to nonnuclear related aspects of submarine security activities between the three AUKUS partners.

Section 1354 defines the term “appropriate congressional committees and leadership” as used in these sections as meaning the Speaker of the House; the House Foreign Affairs, Armed Services, and Appropriations Committees; the Senate majority leader; and the Senate Foreign Relations, Armed Services, and Appropriations Committees.

In addition to the above provisions that focus on submarine security cooperation between the three AUKUS partners, the following sections addressing the AUKUS partnership in general include elements relating to submarine security cooperation, including but not necessarily limited to the following:

Section 1332 directs the senior DOD official designated as responsible for overseeing DOD activities relating to the AUKUS partnership to submit, not later than 90 days after enactment of H.R. 2670, an implementation plan for DOD efforts relating to the AUKUS partnership that includes, among other things, a consideration of the plan’s implications for the industrial base with respect to expanding U.S. submarine construction capacity to fulfill U.S., UK, and Australia requirements; accelerating the restoration of U.S. capabilities for producing highly enriched uranium to fuel submarine reactors; stabilizing commodity markets and expanding supplies of

high-grade steel, construction materials, and other resources required for improving shipyard condition and expanding throughput capacity; and coordinating and synchronizing industrial sourcing opportunities among the three AUKUS partners.

Section 1333 directs the State Department, in coordination with DOD and other appropriate agencies, to submit a report once every two years, starting one year after enactment of H.R. 2670, that includes, among other things, an explanation of the total cost to the United States associated with Pillar One of the AUKUS partnership; a detailed explanation of how enhanced access to Australia's industrial base is contributing to strengthening the U.S. strategic position in Asia; a detailed explanation of the military and strategic benefit provided by improved access to Australian naval bases; and a detailed assessment of how Australia's sovereign conventionally armed nuclear attack submarines contribute to U.S. defense and deterrence objectives in the Indo-Pacific region. The report is to also include a discussion of progress made on achieving Pillar 1, including a description of progress made by the three AUKUS partners to conclude an Article 14 arrangement with the International Atomic Energy Agency (IAEA); a description of the status of efforts of the three AUKUS partners to build the supporting infrastructure to base conventionally armed, nuclear-powered attack submarines; updates on efforts by the three AUKUS partners to train a workforce that can build, sustain, and operate conventionally armed, nuclear-powered attack submarines; a description of progress in establishing submarine support facilities capable of hosting rotational forces in western Australia by 2027; and a description of progress made in improving U.S. submarine production capabilities that will enable the United States to meet its objectives of providing up to five Virginia-class submarines to Australia by the early to mid-2030s, as well as U.S. submarine production requirements.

FY2024 DOD Appropriations Act (H.R. 4365/S. 2587)

Senate

The Senate Appropriations Committee's report (S.Rept. 118-81 of July 27, 2023) on S. 2587 states

Australia-United Kingdom-United States Trilateral Partnership Agreement.—The Committee supports the Australia-United Kingdom-United States Trilateral Partnership Agreement, which will strengthen allied presence and deterrence in the Indo-Pacific. Not later than 90 days after the enactment of this act, the Secretary of Defense shall submit a long-term plan to the congressional defense committees on the planned schedule, milestones, costs, and funding requirements for the transfer of Virginia Class submarines from the United States and to meet the U.S. Navy's requirement for attack submarines. This plan shall include funding requirements and plans for U.S. and partner investments in the U.S. submarine industrial base. (Page 138)

AUKUS Undersea Defense Act (H.R. 3939)

Section 3 of H.R. 3939 would authorize the transfer not more than two Virginia class submarines from the Navy to Australia on a sale basis under section 21 of the Arms Export Control Act, with the cost of the transfer to be borne by Australia. Section 4 would permit DOD to accept from Australia contributions of money made by Australia for use by DOD in support of nonnuclear related aspects of submarine security activities between Australia, the United Kingdom, and the United States. Section 5 would permit the President to transfer or authorize the export of defense services to Australia under the Arms Export Control Act that may also be directly exported to Australian private-sector personnel to support the development of the Australian submarine

industrial base necessary for submarine security activities between Australia, the United Kingdom, and the United States.

AUKUS Submarine Transfer Authorization Act (H.R. 4619)

Section 3 of H.R. 4619 would, among other things, authorize the transfer up to two Virginia-class submarines from the Navy to Australia on a sale basis over a period of 15 years, with the cost of the transfer to be borne by Australia, subject to the President making certain certifications not less than 270 days prior to a transfer of a vessel, and providing for a joint resolution of disapproval by Congress within the 270-day period.

Bilateral Resilience in Industry Trade Security Act (BRITS Act) (H.R. 4715)

H.R. 4715 would amend the Arms Export Control Act to establish exceptions for the United Kingdom relating to licensing of defense articles and defense services for export under the act.

Keeping our Allies Leading in Advancement Act (KOALA Act) (H.R. 4716)

H.R. 4716 would amend the Arms Export Control Act to establish exceptions for Australia relating to licensing of defense articles and defense services for export under the act.

AUKUS Oversight and Accountability Act (H.R. 4725)

Section 2 of H.R. 4725 would require the Department of State to appoint a senior advisor in the Department of State to oversee and coordinate the implementation of the AUKUS partnership, establish a task force on AUKUS governance to be led by the senior advisor, and require the senior advisor to submit reports to Congress on a quarterly and annual basis. Section 3 would make modifications to the Arms Export Control Act and other authorities.

Truncating Onerous Regulations for Partners and Enhancing Deterrence Operations (TORPEDO) Act of 2023 (S. 1471)

S. 1471 contains provisions that would address various proposed activities to be carried out under the AUKUS agreement. Sections relating to the SSN AUKUS project (i.e., Pillar 1) include but are not necessarily limited to Sections 3, 4, 6, and 12-15.

Appendix A. Past SSN Force-Level Goals

This appendix summarizes attack submarine force-level goals since the Reagan Administration (1981-1989).

The Reagan-era (i.e., 1980s-era) plan for a 600-ship Navy included an objective of achieving and maintaining a force of 100 SSNs.

The George H. W. Bush Administration's proposed Base Force plan of 1991-1992 originally called for a Navy of more than 400 ships, including 80 SSNs.¹³⁵ In 1992, however, the SSN goal was reduced to about 55 boats as a result of a 1992 Joint Staff force-level requirement study (updated in 1993) that called for a force of 51 to 67 SSNs, including 10 to 12 with Seawolf-level acoustic quieting, by the year 2012.¹³⁶

The Clinton Administration, as part of its 1993 Bottom-Up Review (BUR) of U.S. defense policy, established a goal of maintaining a Navy of about 346 ships, including 45 to 55 SSNs.¹³⁷ The Clinton Administration's 1997 QDR supported a requirement for a Navy of about 305 ships and established a tentative SSN force-level goal of 50 boats, "contingent on a reevaluation of peacetime operational requirements."¹³⁸ The Clinton Administration later amended the SSN figure to 55 boats (and therefore a total of about 310 ships).

The reevaluation called for in the 1997 QDR was carried out as part of a Joint Chiefs of Staff (JCS) study on future requirements for SSNs that was completed in December 1999. The study had three main conclusions:

- "that a force structure below 55 SSNs in the 2015 [time frame] and 62 [SSNs] in the 2025 time frame would leave the CINC's [the regional military commanders-in-chief] with insufficient capability to respond to urgent crucial demands without gapping other requirements of higher national interest. Additionally, this force structure [55 SSNs in 2015 and 62 in 2025] would be sufficient to meet the modeled war fighting requirements";
- "that to counter the technologically pacing threat would require 18 Virginia class SSNs in the 2015 time frame"; and
- "that 68 SSNs in the 2015 [time frame] and 76 [SSNs] in the 2025 time frame would meet all of the CINC's' and national intelligence community's highest operational and collection requirements."¹³⁹

¹³⁵ For the 80-SSN figure, see Statement of Vice Admiral Roger F. Bacon, U.S. Navy, Assistant Chief of Naval Operations (Undersea Warfare) in U.S. Congress, House Armed Services Committee, Subcommittee on Seapower and Strategic and Critical Materials, *Submarine Programs*, March 20, 1991, pp. 10-11, or Statement of Rear Admiral Raymond G. Jones Jr., U.S. Navy, Deputy Assistant Chief of Naval Operations (Undersea Warfare), in U.S. Congress, Senate Armed Services Committee, Subcommittee on Projection Forces and Regional Defense, *Submarine Programs*, June 7, 1991, pp. 10-11.

¹³⁶ See Richard W. ¹³⁹ Department of Navy point paper dated February 7, 2000. Reprinted in *Inside the Navy*, February 14, 2000, p. 5.

The conclusions of the 1999 JCS study were mentioned in discussions of required SSN force levels, but the figures of 68 and 76 submarines were not translated into official DOD force-level goals.

The George W. Bush Administration's report on the 2001 QDR revalidated the amended requirement from the 1997 QDR for a fleet of about 310 ships, including 55 SSNs. In revalidating this and other U.S. military force-structure goals, the report cautioned that as DOD's "transformation effort matures—and as it produces significantly higher output of military value from each element of the force—DOD will explore additional opportunities to restructure and reorganize the Armed Forces."¹⁴⁰

DOD and the Navy conducted studies on undersea warfare requirements in 2003-2004. One of the Navy studies—an internal Navy study done in 2004—reportedly recommended reducing the attack submarine force level requirement to as few as 37 boats. The study reportedly recommended homeporting a total of nine attack submarines at Guam and using satellites and unmanned underwater vehicles (UUVs) to perform ISR missions now performed by attack submarines.¹⁴¹

In March 2005, the Navy submitted to Congress a report projecting Navy force levels out to FY2035. The report presented two alternatives for FY2035—a 260-ship fleet including 37 SSNs and 4 SSGNs, and a 325-ship fleet including 41 SSNs and 4 SSGNs.¹⁴²

In May 2005, it was reported that a newly completed DOD study on attack submarine requirements called for maintaining a force of 45 to 50 boats.¹⁴³

In February 2006, the Navy proposed to maintain in coming years a fleet of 313 ships, including 48 SSNs.

Although the Navy's ship force-level goals have changed repeatedly in subsequent years, the figure of 48 SSNs remained unchanged until December 2016, when the Navy released a force-level objective for achieving and maintaining a force of 355 ships, including 66 SSNs.

Appendix B. Options for Funding SSNs

This appendix presents information on some alternative profiles for funding the procurement of SSNs. These alternatives include but are not necessarily limited to the following:

- **two years of advance procurement (AP) funding followed by full funding**—the traditional approach, under which there are two years of AP funding for the SSN’s long-leadtime components, followed by the remainder of the boat’s procurement funding in the year of procurement;
- **one year of AP funding followed by full funding**—one year of AP funding for the SSN’s long-leadtime components, followed by the remainder of the boat’s procurement funding in the year of procurement;
- **full funding with no AP funding (single-year full funding, aka point-blank full funding)**—full funding of the SSN in the year of procurement, with no AP funding in prior years;
- **incremental funding**—partial funding of the SSN in the year of procurement, followed by one or more years of additional funding increments needed to complete the procurement cost of the ship; and
- **advance appropriations**—a form of full funding that can be viewed as a legislatively locked in form of incremental funding.¹⁴⁴

Navy testimony to Congress in early 2007, when Congress was considering the FY2008 budget, suggested that two years of AP funding are required to fund the procurement of an SSN, and consequently that additional SSNs could not be procured until FY2010 at the earliest.¹⁴⁵ This testimony understated Congress’s options regarding the procurement of additional SSNs in the near term. Although SSNs are normally procured with two years of AP funding (which is used primarily for financing long-leadtime nuclear propulsion components), Congress can procure an SSN without prior-year AP funding, or with only one year of AP funding. Consequently, Congress at that time had the option of procuring an additional SSN in FY2009 and/or FY2010.

Single-year full funding has been used in the past by Congress to procure nuclear-powered ships for which no prior-year AP funding had been provided. Specifically, Congress used single-year full funding in FY1980 to procure the nuclear-powered aircraft carrier CVN-71, and again in FY1988 to procure the CVNs 74 and 75. In the case of the FY1988 procurement, under the Administration’s proposed FY1988 budget, CVNs 74 and 75 were to be procured in FY1990 and FY1993, respectively, and the FY1988 budget was to make the initial AP payment for CVN-74. Congress, in acting on the FY1988 budget, decided to accelerate the procurement of both ships to

¹⁴⁴ For additional discussion of these funding approaches, see CRS Report RL32776, *Navy Ship Procurement: Alternative Funding Approaches—Background and Options for Congress*, by Ronald O’Rourke.

¹⁴⁵ For example, at a March 1, 2007, hearing before the House Armed Services Committee on the FY2008 Department of the Navy budget request, Representative Taylor asked which additional ships the Navy might want to procure in FY2008, should additional funding be made available for that purpose. In response, Secretary of the Navy Donald Winter stated in part: “The Virginia-class submarines require us to start with a two-year advanced procurement, to be able to provide for the nuclear power plant that supports them. So we would need to start two years in advance. What that says is, if we were able to start in ‘08 with advanced procurement, we could accelerate, potentially, the two a year to 2010.” (Source: Transcript of hearing.) Navy officials made similar statements before the same subcommittee on March 8, 2007, and before the Senate Armed Services Committee on March 29, 2007.

FY1988, and fully funded the two ships that year at a combined cost of \$6.325 billion. The ships entered service in 1995 and 1998, respectively.¹⁴⁶

The existence in both FY1980 and FY1988 of a spare set of Nimitz-class reactor components was not what made it possible for Congress to fund CVNs 71, 74, and 75 with single-year full funding; it simply permitted the ships to be built more quickly. What made it possible for Congress to fund the carriers with single-year full funding was Congress's constitutional authority to appropriate funding for that purpose.

Procuring an SSN with one year of AP funding or no AP funding would not materially change the way the SSN would be built—the process would still encompass two or three years of advance work on long-leadtime components, and an additional five or six years or so of construction work on the ship itself. The outlay rate for the SSN could be slower, as outlays for construction of the ship itself would begin one or two years later than normal, and the interval between the recorded year of full funding and the year that the ship enters service would be longer than normal.

Congress in the past has procured certain ships in the knowledge that those ships would not begin construction for some time and consequently would take longer to enter service than a ship of that kind would normally require. When Congress procured two nuclear-powered aircraft carriers (CVNs 72 and 73) in FY1983, and another two (CVNs 74 and 75) in FY1988, it did so in both cases in the knowledge that the second ship in each case would not begin construction until some time after the first.

¹⁴⁶ In both FY1988 and FY1980, the Navy had a spare set of Nimitz (CVN-68) class nuclear propulsion components in inventory. The existence of a spare set of components permitted the carriers to be built more quickly than would have otherwise been the case, but it is not what made the single-year full funding of these carriers possible. What made it possible was Congress's authority to appropriate funds for the purpose.

Appendix C. SSN Maintenance Backlog

This appendix presents additional background information on the SSN maintenance backlog.

A January 12, 2023, press report stated

Top Navy officials this week promoted the idea of adding more public shipyards [i.e., government-operated naval shipyards, or NSYs] to improve ship maintenance.

Speaking during the annual Surface Navy Association symposium on Wednesday [January 11], Adm. Daryl Caudle, Commander of U.S. Fleet Forces Command, emphatically said there is a good argument for the need to add at least a fifth public shipyard.

“Of course. I need six! I need enough capacity in our shipyards to drive the backlog down to zero...I can today, if I had the backlog chipped down, have a more effective, larger fleet today.” Caudle said on Wednesday during the Surface Navy Association symposium.¹⁴⁷

A November 17, 2022, press report stated (emphasis added)

The U.S. Navy has nearly twice as many submarines sidelined for maintenance than it should, and those boats in maintenance ultimately require three times more unplanned work than they should, the program executive officer for attacks subs has said.

But the service thinks it can turn these and other problematic statistics around by changing when and how it funds submarine maintenance. In fact, Rear Adm. Jon Rucker said he thinks the Navy can implement industry best practices starting in fiscal 2026 and, by the end of that fiscal year, get to almost zero delay days.

Several aspects of submarine maintenance preparation are awry, setting up the boats for poor outcomes, Rucker said this month at the Naval Submarine League’s annual conference.

On the planning side, engineers aren’t sticking to milestones that lock the work package at a certain point; instead, they continue to jam in more work, which throws off assumptions about the materials to order and the availability of skilled labor.

Because of the addition of extra work once the maintenance availability starts, coupled with unexpected problems that arise, Rucker said 30% of the total work on submarines is unplanned, compared to an industry best practice of 10%.

The Navy has set a goal to get to 10% unplanned work by FY26, and much of that improvement will come from discipline in the planning process.

When it comes to ordering materials, Rucker said, the Navy isn’t funding these at the right amount or at the right time.

For starters, he explained, the Navy only funds 40% to 50% of materials ahead of the start of a maintenance availability; the remaining amount is ordered after the availability starts and workers can get a closer look at the insides of the boat. Much of this material is considered “contingent”—the Navy will not order it until workers see that the condition of the submarine requires certain work be done and therefore materials to be ordered.

The problem is that almost every single boat requires all the same contingent work, Rucker said, meaning it would be better to assume up front the work will be done and the parts are required. “We’re going to buy the material anyway; we just buy it late” under the current system, he explained.

By fiscal 2026, he said, the Navy will aim to have 90% to 95% of total material on hand when an availability starts, rather than today’s 40% to 50% figure. This issue of buying

¹⁴⁷ Rich Abott, “Fleet Forces And SecNav Argue For More Maintenance Yards,” *Defense Daily*, January 12, 2023.

materials earlier is made all the more dire by the increasing delivery times of many materials.

Rucker told reporters after his speech at the conference that the Navy used to get away with later material orders for two reasons: The older Los Angeles-class attack boats had a more plentiful inventory of spare parts on hand due to investments when that submarine class was in construction, and because parts not already on hand could typically be delivered within two to 12 months.

Today, the Navy has few spares on hand for the newer Virginia-class boats. And when items like large pumps and valves are unexpectedly needed, it can take as long as three years to get them made and delivered.

“We have to phase the money differently. Our model’s broken because it was built on an assumption of the way things were 20 or 30 years ago, when we had three times the suppliers [in the industrial base], a very mature class” with plenty of spares on hand, he said.

“But the model doesn’t support the fact that we have longer leads, fewer suppliers; it takes more time, and we didn’t buy all the stuff we needed to. We’re going to adjust the way we buy things,” he added.

He made clear the Navy isn’t asking to buy materials “early,” but rather on a new timeline that better reflects long delivery times and the imperative to have 90% to 95% of the material on hand at the start of work.

Rucker said the submarine community decided on these changes too late to modify the FY23 funding request. He’s working to get them implemented in the FY24 budget request, which is to be released in the spring. If the Navy can properly phase its spending on materials for submarine repair work, it will give industry a more predictable workload, ensure more materials are on hand at the start of a repair project and reduce a major barrier to submarines coming out of maintenance on schedule.

Overall, Rucker explained in his speech, the Navy has gone from nearly 1,600 delay days of maintenance for attack submarines in FY19 to 1,100 delay days in FY22, which ended Sept. 30.

Late materials alone account for more than 100 of those days, Rucker said.

His office projects that figure will come down to about 700 delay days by FY26 based on changes already implemented—and Rucker said that better planning and earlier materials purchased will get the community to as close to zero as possible by the end of FY26, assuming the changes are implemented this next budget cycle.

This drive to zero delay days comes in the context of an undersized attack submarine force that’s kept busy. Navy and Pentagon leadership repeatedly call the submarine force among America’s top advantages over adversaries like China and Russia; yet the U.S. has 50 attack submarines and four related “large payload submarines,” compared to a requirement for a combined 66 to 72 attack and large payload subs.

Of the 50 attack subs, Rucker said 18 are in maintenance or waiting for their turn. Industry best practice would call for just 20% to be tied up in repairs, or 10 boats instead of 18.¹⁴⁸

The Navy in 2010 decided to put the submarines through fewer but longer maintenance availabilities, allowing the boats to have longer operational cycles. But Rucker said this

¹⁴⁸ Regarding this point, see also Megan Eckstein, “Navy Frustration Building over Late Weapons, Ship Deliveries,” *Defense News*, January 11, 2023; Rich Abott, “Fleet Forces And SecNav Argue For More Maintenance Yards,” *Defense Daily*, January 12, 2023; Justin Katz, “As AUKUS Looms, US Navy Sub Leaders Sound Alarms at Home,” *Breaking Defense*, November 4, 2022.

new model—when all the delays are taken into account—means a sub going into maintenance is out of the fleet for an average of 450 to 700 days, depending on the class, at a time when operational commanders are itching for all the submarine presence they can get.

To help overcome the backlog of maintenance work faster, construction yards Newport News Shipbuilding and General Dynamics Electric Boat are helping with some repairs of Los Angeles-class subs. The former has Columbus, and the latter was awarded a contract over the summer for repairs on Hartford.

Boise, the poster child for submarine maintenance woes—it returned from its last deployment in January 2015 and has been waiting to get into maintenance since fiscal 2016, losing its certification to dive amid the delays—is expected to go into maintenance at Newport News. But Rucker said a final decision on its funding would be revealed in the FY24 budget request, and he would not comment further on plans for that boat.¹⁴⁹

A November 14, 2022, press report stated

When a U.S. attack submarine arrives for shipyard maintenance, Navy rules say the vast majority of the necessary parts and materiel must be there waiting. But most jobs actually begin with half or even fewer of the needed items on hand. That means delays, extra cost, and usually, stealing items from other projects, which compounds the problems across the sub force.

That’s a planning and funding problem, according to the program executive officer for attack submarines, who says he’s working to fix it by 2026.

“On the material side, we are not funding them properly... We do not fund the right amount and we do not phase it properly,” Rear Adm. Jonathan Rucker said Nov. 2 at the annual Naval Submarine League symposium in Arlington, Virginia...

Currently, just 40 to 50 percent of the required parts and material are on hand when a sub arrives in the yard, Rucker said.

Part of the problem is that the Navy lacks funds for “contingent material”: parts to fix problems that are discovered during the work, like valves that are found to need replacement. But, Rucker said, these kinds of things are actually predictable.

“Every availability—about 90 percent—we use the same stuff. We know that, but we don't order it until then,” he said.

Because submarine parts are so specialized and the supply chain so constrained, this generally means the yard has to take the items from some other planned submarine-maintenance project, Rucker said.

“And with lead times of material on the order of up to two years and some more, no wonder we don't have the material we have to count on,” he said. “Because we order it after the avail starts, and we don't get it in time to do it, so we got to take it from somewhere else.”

Rucker said for new construction, the material is bought upfront. He wants to do the same for sustainment.

“So, we're changing that model so where we're going to phase the funding differently and order the contingent material in advance and so it's ready,” he said. “So when we get to that point, the stuff's on the shelf. That's part of the problem of not buying all that stuff early on. Decisions were made early; we got to get after it.”

¹⁴⁹ Megan Eckstein, “US Navy Hopes New Funding Model Can Cut Sub Maintenance Delays by 2026,” *Defense News*, November 17, 2022.

By 2026, each availability will start with the required 90 to 95 percent of the material on hand, he said.

But missing material is only part of what causes submarine-maintenance delays. Rucker said that planning and shipyard throughput are also causes for not “executing.”

Currently, the attack submarine force has about 1,100 days of maintenance delay, down from about 1,500 to 1,600 days in 2019, Rucker said, adding that improvements already in the works will reduce total annual delay days to 700 by 2026.

Late material adds 100 to 111 days of delay to each availability. These are the delays that better planning and funding is intended to reduce.

How the Navy could do this phased-funding approach is unclear. Rucker told reporters he is working to see which budget year to introduce it. When asked about the budgeting process for implementing something like this, officials with U.S. Naval Sea Systems Command and the Navy said they could not comment on internal budget deliberations or future budgets.¹⁵⁰

A November 2, 2022, press report stated

Within the next year the US Navy wants to initiate a “scoping study” aimed at determining if the service needs to establish a fifth public shipyard to support future submarine maintenance, according to a senior officer involved in the task, a notion that previously met with some resistance from lawmakers.

Rear Adm. Jonathan Rucker, program executive officer for attack submarines, told reporters here at the Naval Submarine League symposium that industry frequently asks the Navy about considerations for a new public shipyard. He also stressed that the scoping study was preliminary and there is no clear consensus in the service yet about whether another shipyard is even necessary, let alone whether it will be built.

“Right now, we’re in a stage to say: ‘Let’s go scope how capable our shipyards could be?’” he said. Once the service completes its Shipyard Infrastructure Optimization Program, “how efficient will we be?” he continued, referring to the Navy’s 20-year plan to overhaul the four existing public shipyards....

Breaking Defense in May published an extensive report about one Ohio businessman’s proposal to the Navy to do just that [see the May 9, 2022, press report excerpted below]. Ed Bartlett, an engineer and former enlisted sailor, called his proposal “the only actionable plan” to relieve the Navy’s submarine maintenance backlog, and he has numerous former admirals, shipbuilding industry giants and local politicians backing his ideas. But at the time, lawmakers on Capitol Hill seemed unconvinced that now’s the time for such a major investment. [Rep.] Joe Courtney, Conn., a House Democrat known for being hawkish on Navy spending, called it a “tall order.”

Rucker today said the service had underestimated several issues that are now causing problems, such as the second- and third-tier ramifications of the coronavirus pandemic. But he added that another shipyard is a “big path to go down,” if that decision is ever made. Right now, the Navy’s urgent focus is on improving the capabilities and efficacy of the current shipyards, he added.¹⁵¹

¹⁵⁰ Caitlin M. Kenney, “Only Half the Parts Are Waiting When US Attack Submarines Come in For Repairs,” *Defense One*, November 14, 2022. See also Justin Katz, “As AUKUS looms, US Navy Sub Leaders Sound Alarms at Home,” *Breaking Defense*, November 4, 2022.

¹⁵¹ Justin Katz, “Navy ‘Scoping Study’ to Examine Shipyard Capacity, Potential for a New Yard,” *Breaking Defense*, November 2, 2022.

A September 21, 2022, press report stated

The submarine industrial base, already strained by demand for new construction, may need to accelerate its production of spare parts to alleviate submarine maintenance woes.

The vast majority of submarine maintenance availabilities run late, in part due to poor planning practices and in part because repair yards rely on a pool of replacement parts “that just doesn’t exist” after the Navy failed to sufficiently prepare for Virginia-class submarine sustainment, according to two admirals.

“That upfront investment didn’t happen for Virginia-class, so we’re missing that whole sustainment tail, or a big portion of that,” Rear Adm. Scott Brown, the deputy commander of Naval Sea Systems Command for industrial operations (NAVSEA 04), said Sept. 20 at the American Society of Naval Engineers’ annual Fleet Maintenance and Modernization Symposium [here](#).

“It’s resulting in a lot of churn, a lot of cannibalization—so we have to take things off other boats to stick them on the boat we’re trying to get out—and a lot of, frankly, frustration with the workforce on waiting for stuff that doesn’t exist,” he added. “Of course, that leads to delays.”

He said the Navy asked the Center for Naval Analyses to study the connection between material delays and extended maintenance availabilities; the research organization found the lack of material on hand “is a fairly large contribution to our delays,” according to Brown.

Vice Adm. Bill Galinis, the commander of NAVSEA, said Sept. 21 at the same conference that only 20% to 30% of submarine maintenance availabilities over the last decade have finished on time. The problem is worsening as the Virginia-class submarines account for a greater percentage of the undersea fleet, he said.

“We’ve seen a significant growth in the amount of man days required to complete a submarine [maintenance] availability, particularly a Virginia-class one, and [we’re] really trying to deep-dive and understand why that really is,” Galinis added.

He pointed to a couple potential factors. For parts purchased with annual operations and maintenance funding, global supply chain issues mean it takes longer for parts to be delivered. In some cases, it’s taking up to two years, putting current and upcoming availabilities at risk.

For spare parts managed through the Defense Logistics Agency or the Naval Supply Systems Command, the Navy has only funded some of these at about 40% or 50% in recent years. As a result, parts simply aren’t in the inventory when needed by the Navy’s four public shipyards.

And, Galinis added, the rotatable pool of spares is too small due to a lack of investment in the early years of the Virginia-class acquisition. The rotatable pool is made up of parts taken off a submarine by shipyard workers and later refurbished for use in the future.

He added that the refurbishment process is moving too slowly, meaning parts aren’t available when needed. Galinis said the Navy may have to contract out some of that refurbishment work.

Brown told Defense News his office, which oversees the work of all four public shipyards, wants to increase the inventory of each component in the rotatable pool and also add new types of components that have particularly blocked the service from completing maintenance availabilities on time.

Brown said he doesn’t expect the problem to cost the Navy more, but the service may need to spend more quickly on spares and sustainment.

“That’s going to cause a push of material dollars to the left in the [five-year Future Years Defense Program] to buy early to make sure we have that stuff. But it’s eventually going to equalize out, because we’re going to end up buying it anyway,” he said.

Galinis also pointed to a lack of rigor in submarine planning and project management, which he said is exacerbating the maintenance delays.

A number of pre-availability assessments and tests must take place on all submarines, aircraft carriers and surface ships to help identify the exact condition of the ship and what work is needed.

“The submarine force is probably the hardest one for us to get that done, principally because of their operational schedule and just in some cases the difficulty getting teams out to a submarine,” Galinis said. But it means some planning documents aren’t completed until the submarine is back in port, generating additional delays.

Indeed, whereas surface ships only see about 10% so-called unplanned work, aircraft carriers have been seeing a 22% unplanned work rate and submarines are nearing 30%, the NAVSEA commander said.¹⁵²

A July 11, 2022, press report stated that

maintenance issues are hindering the East Coast fleet’s readiness, according to Adm. Daryl Caudle, who leads U.S. Fleet Forces Command....

[Caudle stated:] “As far as some things I’m seeing where we’re not performing: Let’s go to the submarine force first. The lack of capacity and the lack of performance at our public and private yards are driving availabilities—these are depot availabilities now—past our class maintenance time frames to such an extent that they have consumed all the dry docks. So if I have an emergent issue, I don’t really have good options to bring in units for those things that may be emergent dry-docking repairs. They have also forced ships—because submarines expire, their hulls expire—for them to be tied up alongside waiting on their availability to start because there’s no place to put them. We call those idle submarines.

“The number of idle submarines has crept up over time. They fluctuate now between five to, worst case, it got to a point we were at about nine out. So these are submarines just sitting pierside because the hulls expired, they can’t submerge and they’re not ready to go into their depot availability. This backlog is causing me to lose fleet size due to this problem.”¹⁵³

A May 12, 2022, press report states

Chief of Naval Operations Adm. Michael Gilday had blunt words today for two powerhouse companies that build submarines for the Navy: We need your shipyards, but not the problems that come with them.

“We know that we don’t have the capacity in our public shipyards to handle all of that [submarine] maintenance. We need Electric Boat and we need Huntington Ingalls to be able to do that work,” said Gilday. “They are under performing. They are over cost and way over schedule.”

Gilday was testifying before the Senate Armed Services Committee about the Navy’s fiscal 2023 budget request alongside Navy Secretary Carlos Del Toro and Marine Corps Commandant Gen. David Berger....

¹⁵² Megan Eckstein, “Submarine Fleet Needs More Spare Parts to Stem Maintenance Delays,” *Defense News*, September 21, 2022. See also Sam LaGrone, “NAVSEA: Navy ‘Struggling’ to Get Attack Subs Out of Repairs on Time as Demand Increases,” *USNI News*, September 21, 2022.

¹⁵³ Megan Eckstein, “Six Questions with the Head of US Fleet Forces Command,” *Defense News*, July 11, 2022.

Todd Corillo, a Newport News Shipbuilding spokesman, in a statement to *Breaking Defense*, acknowledged the shipbuilder has “experienced challenges” since reconstituting its submarine repair business “following a 10-year hiatus.”

“In this time, we have built a proficient workforce, matured the supply chain, developed process improvements and made smart investments in required facilities,” he said. “Although we experienced challenges with our transition back into this complex business, we are now keeping pace with current submarine repair needs and also forecasting future workflow to drive predictable capacity and performance.”¹⁵⁴

A May 9, 2022, press report stated

With the Navy working through its long-term plan to relieve the notorious submarine maintenance backlog and other well-known issues piling up at the service’s four public shipyards, into the space has stepped Ed Bartlett, an engineer and former enlisted sailor who has spent the last several years arguing that the solution is obvious: It’s time to build a fifth shipyard.

Bartlett has now twice pitched the Navy on a proposal to buy and build a fifth public shipyard and depot facility in Ohio. His company calls the proposal “the only actionable plan” to relieve the Navy’s submarine maintenance backlog, and his offer has the backing of former admirals, a shipbuilding industry giant and local politicians.

But what may seem an easy solution on paper has, so far, been met with cold reality. The Navy rejected Bartlett’s proposal the first time due to cost and policy concerns, and still sees issues with a revised proposal submitted earlier this year. There’s also a host of technical and legal hurdles any plan for a new shipyard in the Great Lakes would have to overcome.

And while lawmakers have been less than impressed with the Navy’s long-term, \$21 billion Shipyard Infrastructure Optimization Plan (SIOP), there doesn’t seem to be much energy around the idea of a new shipyard—at least outside of the Ohio delegation, who would benefit from Bartlett’s pitch.

With the Navy’s first admiral directly charged with overseeing SIOP set to testify in front of Congress this week for the first time, the one thing that all sides seem to agree on is this: The Navy must move faster to get its ships out of port and underway, and business as usual will only leave the US critically vulnerable in a future conflict.¹⁵⁵

A February 16, 2022, press report stated

The U.S. Navy attack submarine force inventory is at a low, and maintenance backlogs are making it harder to conduct important development work, the commander of the submarine force in U.S. Pacific Fleet said this week.

Rear Adm. Jeffrey Jablon said the SSN fleet sits at just 47 today—down from 50 attack subs in the fall, due in part to submarine decommissionings happening as planned while new deliveries from industry run behind schedule.

That 47 is further diminished by maintenance challenges, he said while speaking at a Feb. 16 panel at the WEST 2022 conference, cohosted by the U.S. Naval Institute and AFCEA International.

In fiscal 2016, because of idle time for subs awaiting maintenance—on boats which have exceeded their operational limits and were no longer allowed to submerge under the water until they underwent maintenance—the Navy lost about 360 days of operations.

¹⁵⁴ Justin Katz, “Navy’s Submarine Builders ‘Over Cost’, ‘Under Performing’: Top Admiral,” *Breaking Defense*, May 12, 2022.

¹⁵⁵ Justin Katz, “Is a New Navy Shipyard Realistic, or Just a ‘Tall Order?’” *Breaking Defense*, May 9, 2022.

In FY21, the fleet lost nearly 1,500 days to idle time—the equivalent of taking four submarines out of the fleet.

Additionally, Jablon said in FY21 the fleet lost the equivalent of 3.5 submarines to repair periods that ran longer than planned.

“That’s about seven and a half SSNs that I cannot use last year because of awaiting maintenance or maintenance delay,” he said.

Even with that smaller fleet, he told *Defense News*, “we meet all our operational commitments. We’re able to ensure that our ships are combat ready when they deploy. We meet the requirements of our combatant commanders that are placed upon us.”

But “it results in less ability to do tactical development at sea,” Jablon added, noting it also cuts into commanding officers’ discretionary time at sea to bolster training in particular areas.

“We’re still able to prepare the ship to be combat ready when they deploy,” he said, but “it’s more difficult, it’s more deliberate, it takes more input from the [type commander] staff to do that.”¹⁵⁶

A September 22, 2020, press report stated

It has been five years since the attack submarine *Boise* returned from its last patrol, and this whole time she has been waiting on some loving care and attention in the shipyards.

On Monday [September 21], the check cleared for roughly \$351.8 million that covers the initial planning and work as part of her overhaul at Huntington Ingalls Newport News Shipbuilding where she has been in dry dock since earlier this year. Another contract covering the full engineering overhaul is in negotiations, according to Naval Sea System Command spokesperson Colleen O’Rourke,¹⁵⁷ work that will include significant maintenance on the nuclear propulsion system and modernization upgrades.

The running tab on *Boise* so far is \$355 million, with advanced planning money already awarded, according to the Defense Department contract announcement. The work under this contract is scheduled to wrap up in May 2023, eight years after the sub left the operational fleet.

While *Boise* could be wrapped up by 2023—the overhaul was initially scheduled for 25 months—it’s possible the repairs could take longer, O’Rourke said.

The bill will be paid out of 2020 Operations & Maintenance funding, according to the contract announcement.

Boise has been something of a cause célèbre among congressional leaders, who have pointed to the ship’s long wait to enter the shipyard as emblematic of the Navy’s struggle with maintenance delays. The issue with attack submarines has been complicated, because while that work would typically be done in the public shipyards, those have been backed up with aircraft carriers and the Ohio-class ballistic missile subs.

Some of the Navy’s problems will resolve themselves after ballistic missile subs are refueled, said Bryan Clark, a retired submarine officer and analyst with the Center for Strategic and Budgetary Assessments, in a 2019 interview.

“The big factor here is that attack submarines are last in line when it comes to maintenance,” Clark explained then. “And that maintenance is done in the public yards, both the refueling and non-refueling overhauls. So that’s why you see submarines like

¹⁵⁶ Megan Eckstein, “Submarine Maintenance Backlogs and Delays Take Toll on Fleet’s Development Work at Sea,” *Defense News*, February 16, 2022.

¹⁵⁷ Colleen O’Rourke is no relation to Ronald O’Rourke.

Boise who have been waiting a long time to get in, because carriers had a lot of maintenance backlog”.

“And working through that backlog pushed SSBN refuelings back, and that in turn pushed attack subs to the end of the line. Now that they are working through the carrier backlog and the SSBN refueling is now largely completed, that’s going to mean the attack submarines can be brought back into the public shipyards. So that’s a structural issue that’s going to work itself out.”

But other aspects of the Navy’s quest to dig out of the submarine backlog are thornier and will require the service to make long-term commitments to private shipyards, Clark said. One of the main issues with assigning attack subs to private shipyards is that they are not necessarily set up as maintenance shops: They’re more so built and organized as new construction yards.

Naval Sea Systems Command acknowledged as much in a statement to the *Virginian Pilot* as part of a story on the delays of *Columbus* and *Helena*, which the command attributed to “the workforce’s inexperience in conducting submarine maintenance, which differs greatly from new construction.”...

In an interview with USNI News, former Naval Sea Systems Command head Vice Adm. Thomas Moore said he thought Boise would go better than previous attempts at maintaining attack boats in private shipyard.

“I think we are well-positioned on Boise, certainly way better than we were on *Helena* and *Columbus*, when we learned so many lessons the hard way,” Moore said. “They hadn’t done submarine work in 10 years, and I think we underestimated how they had atrophied in that skill set. I think they did as well.

“And the other thing is, I think we recognized that we probably put too much on their plate, with multiple [maintenance] availabilities [i.e., ship maintenance projects] on their plate at one time.”¹⁵⁸

An August 2020 GAO report on maintenance delays on aircraft carriers and submarines stated

The Navy’s four shipyards completed 38 of 51 (75 percent) maintenance periods late for aircraft carriers and submarines with planned completion dates in fiscal years 2015 through 2019, for a combined total of 7,424 days of maintenance delay. For each maintenance period completed late, the shipyards averaged 113 days late for aircraft carriers and 225 days late for submarines.

Maintenance Delays at Navy Shipyards for Fiscal Years 2015 through 2019

Aircraft Carriers
 • 8 of 18 on time
 • 1,128 days of maintenance delay

Submarines
 • 5 of 33 on time
 • 6,296 days of maintenance delay

Source: GAO analysis of Navy data (text); U.S. Navy/T. Nguyen (aircraft carrier); U.S. Navy/D. Amodo (submarine). | GAO-20-588

Unplanned work and workforce factors—such as shipyard workforce performance and capacity (having enough people to perform the work)—were the main factors GAO identified as causing maintenance delays for aircraft carriers and submarines. The Navy frequently cited both factors as contributing to the same days of maintenance delay. Unplanned work—work identified after finalizing maintenance plans—contributed to more than 4,100 days of maintenance delays. Unplanned work also contributed to the

¹⁵⁸ David B. Larter, “The Hapless Attack Sub Boise Could Return to the Fleet in 2023 After 8 Years Sidelined,” *Defense News*, September 22, 2020.

Navy's 36 percent underestimation of the personnel resources necessary to perform maintenance. The workforce factor contributed to more than 4,000 days of maintenance delay on aircraft carriers and submarines during fiscal years 2015 through 2019.

The Navy has taken steps but has not fully addressed the unplanned work and workforce factors causing the most maintenance delays. First, the Navy updated planning documents to improve estimates and plans to annually update these data, but knowing whether changes improve results may take several years. Second, the Navy has consistently relied on high levels of overtime to carry out planned work. GAO's analysis found that high overtime among certain production shops, such as painting or welding, averaged from 25 to 32 percent for fiscal years 2015 through 2019, with peak overtime as high as 45 percent. Furthermore, shipyard officials told us that production shops at all four shipyards are working beyond their capacity. Overtime at such rates has been noted as resulting in diminished productivity. Third, the Navy initiated the Shipyard Performance to Plan initiative in the fall of 2018 to address the unplanned work and workforce factors, but it has not yet developed 13 of 25 planned metrics that could improve the Navy's understanding of the causes of maintenance delays. In addition, the Shipyard Performance to Plan initiative does not include goals, milestones, and a monitoring process along with fully developed metrics to address unplanned work and workforce weaknesses. Without fully developing metrics and implementing goals, action plans, milestones, and a monitoring process, the shipyards are not likely to address unplanned work and workforce weaknesses and the Navy is likely to continue facing maintenance delays and reduced time for training and operations with its aircraft carriers and submarines.¹⁵⁹

A May 26, 2020, press report stated

After years of struggling to conduct attack submarine maintenance—with the four public naval shipyards prioritizing SSN work last, behind a backlog of ballistic-missile sub and aircraft carrier work, and private shipyards finding it tough to resume submarine repair work after years of only doing new construction—the Navy appears back on track for its SSN maintenance, the head of Naval Sea Systems Command told USNI News.

The move of attack submarine USS Boise (SSN-764) to the dry dock at Newport News Shipbuilding in Virginia is the most visible sign of things moving in the right direction, after the sub has been sitting pier side at nearby Norfolk Naval Shipyard for more than four years waiting for maintenance to begin.

The Navy had previously hoped to get Boise into Newport News as early as 2018, but the private yard struggled with its first two Los Angeles-class SSN maintenance periods—for USS Helena (SSN-725) and USS Columbus (SSN-762)—and didn't have the room for the sub or the workforce to start working on it. As Boise lingered, it became a focal point in the discussion about a lack of repair capacity and a backup of work at the four public naval shipyards.

But, NAVSEA Commander Vice Adm. Tom Moore told USNI News, the Navy is moving into a new era of on-time submarine maintenance....

Moore told USNI News in an interview last week that "I think we are well-positioned on Boise, certainly way better than we were on Helena and Columbus, when we learned so many lessons the hard way: that, one, they hadn't done submarine work in 10 years, and I think we underestimated how they had atrophied in that skill set, and I think they did as well; and the other thing is, I think we recognized that we probably put too much on their plate, with multiple availabilities on their plate at one time." ...

Moore said that Electric Boat likely won't be a provider of submarine maintenance for much longer—aside from an availability for USS Hartford (SSN-768) that starts in

¹⁵⁹ Government Accountability Office, *Navy Shipyards[:] Actions Needed to Address the Main Factors Causing Maintenance Delays for Aircraft Carriers and Submarines*, GAO-20-588, August 2020, summary page.

November 2021, the Connecticut yard will have its hand full with construction of Columbia-class SSBNs and Block V Virginia-class SSNs. Moore said it's important to get the sub repair capability reconstituted at Newport News Shipbuilding so that one private yard can serve as part of the SSN repair community....

Moore acknowledged that the bulk of the Navy's problems in recent years was that its four public shipyards, tasked with maintaining nuclear-powered submarines and aircraft carriers, did not have the capacity to keep up with demand....

If the plan can be executed, Moore said the anticipated work at Norfolk Naval Shipyard matches the workforce capacity, meaning there should be no more backlog....

Though Boise has remained a "problem child" for longer than anticipated, Moore noted in the recent interview that SSN maintenance is wrapping up on time more and more as capacity at the public yards grows....

Moore said he was confident NAVSEA was in a good position on SSN maintenance because a whole set of improvements had been made in tandem in recent years: not only was the [naval shipyard] workforce now up to its goal of 36,700 personnel, but an effort to create better business practices is underway and the first projects in a 20-year Shipyard Infrastructure Optimization Plan (SIOP) program are already hitting the waterfront.¹⁶⁰

A March 2019 Navy report to Congress states that in response to the above committee report language

The Navy submitted an initial [submarine maintenance] plan in December 2018, that reflected FY 2019 budget information. The Navy has [now] updated this plan to incorporate data from the President's FY 2020 budget submitted on March 11, 2019....

... In the post-Cold War and post 9/11 era, there have been decades of decisionmaking associated with the re-posturing of defense strategies, such as: the reduction in maintenance capacity and flexibility through Base Realignment and Closures (BRAC), increased Operational Tempo (OPTEMPO), evolution of submarine life cycle maintenance plans, budget reductions, and budget uncertainties that have contributed to the current challenges facing the submarine fleet.

The root cause of submarine idle time and associated loss of operational availability, as discussed in the recent Government Accountability Office (GAO) report 19-229, "Actions Needed to Address Costly Maintenance Delays Facing the Attack Submarine Fleet" (issued November 2018), is largely due to public shipyard capacity not keeping pace with growing maintenance requirements that have been building for a number of years prior to the USS BOISE (SSN 764) FY 2016 Engineered Overhaul (EOH). The workload to capacity mismatch resulted in lower priority attack submarine (SSN) availabilities (as compared to ballistic missile submarines and nuclear-powered aircraft carriers) being delivered late and a bow-waving of workload from one fiscal year to the next that could not be executed. The workload backlog exacerbated the public shipyard workload-to-capacity mismatch and contributed to an increasing trend in late SSN [maintenance] deliveries.

The Navy has taken several actions to improve the workload-to-capacity balance at the public shipyards. Notably, over 20,600 workers were hired from FY 2013 through FY 2018, which after accounting for attrition, increased total end strength from 29,400 to 36,700. However, the accelerated hiring resulted in 56 percent of the production workforce having less than five years of experience. The less experienced workforce requires a greater investment in training, as described in the Navy's Report to Congress on the Naval Shipyard Development Plan (issued March 2018), which offers some near term productivity gains. The Navy has also taken additional actions to balance workload at our

¹⁶⁰ Megan Eckstein, "NAVSEA Says Attack Sub Repairs Much Improved as USS Boise Enters Yard Following 4-Year Wait," *USNI News*, May 26, 2020.

public shipyards by outsourcing four submarine maintenance availabilities to the private sector and plans to outsource another two submarine availabilities to the private shipyards starting in FY 2020 and FY 2021. Additionally, to ensure on-time delivery from maintenance availabilities, availability inductions have been rescheduled to occur when the shipyards have the capacity to accomplish the availability(s) within programmed schedule durations. This necessary action to improve the on-time delivery of current maintenance availabilities has resulted in some additional submarine maintenance backlog and some accumulation of idle time. Based on actions and initiatives the Navy is currently pursuing to improve submarine operational availability and the outsourcing of two additional submarine availabilities to the private sector, the Navy assesses that the submarine idle time will be eliminated by the end of FY 2023 and the submarine maintenance backlog will be worked off by the end of FY 2023.¹⁶¹

A November 2018 GAO report on the issue stated the following:

The Navy has been unable to begin or complete the vast majority of its attack submarine maintenance periods on time resulting in significant maintenance delays and operating and support cost expenditures. GAO's analysis of Navy maintenance data shows that between fiscal year 2008 and 2018, attack submarines have incurred 10,363 days of idle time and maintenance delays as a result of delays in getting into and out of the shipyards. For example, the Navy originally scheduled the USS Boise to enter a shipyard for an extended maintenance period in 2013 but, due to heavy shipyard workload, the Navy delayed the start of the maintenance period. In June 2016, the USS Boise could no longer conduct normal operations and the boat has remained idle, pierside for over two years since then waiting to enter a shipyard.... GAO estimated that since fiscal year 2008 the Navy has spent more than \$1.5 billion in fiscal year 2018 constant dollars to support attack submarines that provide no operational capability—those sitting idle while waiting to enter the shipyards, and those delayed in completing their maintenance at the shipyards.

The Navy has started to address challenges related to workforce shortages and facilities needs at the public shipyards. However, it has not effectively allocated maintenance periods among public shipyards and private shipyards that may also be available to help minimize attack submarine idle time. GAO's analysis found that while the public shipyards have operated above capacity for the past several years, attack submarine maintenance delays are getting longer and idle time is increasing. The Navy may have options to mitigate this idle time and maintenance delays by leveraging private shipyard capacity for repair work. But the Navy has not completed a comprehensive business case analysis as recommended by Department of Defense guidelines to inform maintenance workload allocation across public and private shipyards. Navy leadership has acknowledged that they need to be more proactive in leveraging potential private shipyard repair capacity. Without addressing this challenge, the Navy risks continued expenditure of operating and support funding to crew, maintain, and support attack submarines that provide no operational capability because they are delayed in getting into and out of maintenance.¹⁶²

Appendix D. December 2021 Determinations Pursuant to Defense Production Act (DPA)

This appendix presents background information on three determinations signed by President Biden on December 21, 2021, permitting the use of the Defense Production Act (DPA)¹⁶³ to strengthen the U.S. submarine industrial base for the purpose of increasing production of Virginia-class submarines.

A December 21, 2021, memorandum from President Biden to Secretary of Defense Lloyd Austin stated

By the authority vested in me as President by the Constitution and the laws of the United States of America, including section 303 of the Defense Production Act of 1950, as amended (the “Act”) (50 U.S.C. 4533), I hereby determine, pursuant to section 303(a)(5) of the Act, that:

- (1) Large Scale Fabrication, Shipbuilding Industrial Base Expansion for Resilience and Robustness, and Maritime Workforce Training Pipelines in support of Virginia Class attack submarine production are industrial resources, materials, or critical technology items essential to the national defense;
- (2) without Presidential action under section 303 of the Act, United States industry cannot reasonably be expected to provide the capability for the needed industrial resource, material, or critical technology item in a timely manner; and
- (3) purchases, purchase commitments, or other action pursuant to section 303 of the Act are the most cost-effective, expedient, and practical alternative method for meeting the need.

Pursuant to section 303(a)(7)(B) of the Act, I find that action to expand the domestic production capability for these supply chains is necessary to avert an industrial resource or critical technology item shortfall that would severely impair national defense capability. Therefore, I waive the requirements of section 303(a)(1)-(a)(6) of the Act for the purpose of expanding the domestic production capability for these supply chains.

Ensuring a robust, resilient, and competitive domestic defense industrial base that has the capability, capacity, and workforce to meet the Virginia Class submarine undersea warfighting mission is essential to our national security.

You are authorized and directed to publish this determination in the Federal Register.¹⁶⁴

A December 22, 2021, DOD statement about the presidential determinations stated

The president signed on Dec. 21, 2021 three determinations permitting the use of the Defense Production Act (DPA) to strengthen the U.S. submarine industrial base. The expansion of the authority will allow the U.S. Navy to maintain its maritime superiority.

Scaling the production of Virginia Class Attack Submarines will ensure the U.S. Navy can meet its missions to maintain open sea lanes for global communication and commerce, enhance diplomatic partnerships, and grow a robust underwater warfare capability.

¹⁶³ For more on the DPA, see CRS Report R43767, *The Defense Production Act of 1950: History, Authorities, and Considerations for Congress*, by Heidi M. Peters, and CRS In Focus IF11767, *The Defense Production Act Committee (DPAC): A Primer*, by Michael H. Cecire.

¹⁶⁴ White House, “Memorandum on the Presidential Determination Pursuant to Section 303 of the Defense Production Act of 1950, as amended,” December 21, 2021.

Through the DPA, the U.S. Navy can make key investments with the manufacturers and suppliers executing the submarine shipbuilding plan.

These activities will strengthen the shipbuilding industrial base and allow its heavy manufacturing and large scale fabrication suppliers to meet growing demand and expand the maritime workforce training pipeline.

The department continues to work with key stakeholders to use the DPA authorities to address risks and challenges across the Submarine Enterprise supply chain. These authorities expand options and opportunities to accelerate and scale critical investments across key markets.¹⁶⁵

Regarding Title III of the DPA, DOD states

The Defense Production Act (DPA) Title III program is dedicated to ensuring the timely availability of essential domestic industrial resources to support national defense and homeland security requirements. The program works in partnership with the Uniformed services, other government agencies, and industry to identify areas where critical industrial capacity is lagging or non-existent. Once an area is identified, the program engages with domestic companies to mitigate these risks using grants, purchase commitments, loans, or loan guarantees. By executing its mission, the DPA Title III program reduces the nation's reliance on foreign supply chains and ensures the integrity of materials supplied to the American Warfighter.

The DPA Title III program, governed by 50 USC 4531-4534, is one of the key investment tools of the [DOD] Industrial Policy office.¹⁶⁶

A December 22, 2021, Navy information paper states

The Defense Production Act (DPA) Title III program is dedicated to ensuring the timely availability of essential domestic industrial resources to support national defense and homeland security requirements. The program works in partnership with the Uniformed services, other government agencies, and industry to identify areas where critical industrial capacity is lagging or non-existent. Once these fragilities, vulnerabilities, or opportunities are identified, DPA authorities are uniquely positioned to allow engagement with domestic suppliers that mitigate capacity and capability risks using grants, purchase commitments, loans, or loan guarantees

As the U.S. Navy continues to build a more lethal force that maintains maritime superiority, enables sea lanes of global communication and commerce, and ensures diplomatic partnerships, strategic undersea warfare remains the foundation. With VIRGINIA Class (VCS) currently challenged to meet a two per year production cadence, increasing the capacity and capabilities of the submarine industrial base is necessary to achieve the generational increase in demand. This demand will continue to grow with serial production of one (1) COLUMBIA Class (CLB) submarine plus two VIRGINIA Class (VCS) submarines per year expected to start in Fiscal Year 2026.

DPA Title III authorities granted in these PDs support Navy efforts to achieve and sustain consistent production of the VCS Program, meeting schedule and a cadence of two VCS per year in accordance with authorizations and appropriations, concurrent with the national priority CLB Class Ballistic Missile Submarine Program. Specific areas of focus for leveraging these authorities are: strategic sourcing expansion, shipbuilding industrial base expansion for resilience and robustness, and growing the maritime workforce training pipeline.

¹⁶⁵ Department of Defense, "Defense Production Act Title III Presidential Determinations for Submarine Industrial Base Production Capacity Essential to the Virginia Class Attack Submarine Program," December 22, 2021.

¹⁶⁶ Department of Defense, "Defense Production Act (DPA) Title III," undated, accessed January 3, 2022.

Specific projects with associated costs and timelines to support sustained 1 CLB + 2 VCS per year are being refined, and the Navy will consider where this DPA Title III authority will best mitigate capacity and capability risks.¹⁶⁷

¹⁶⁷ Navy information paper entitled “Defense Production Act Title III—Presidential Determination for Virginia Class Production,” December 22, 2021, provided to CRS and CBO by Navy Office of Legislative Affairs on January 7, 2022. See also Sten Spinella, “Defense Production Expansion Could Bring Help to Region’s Submarine Industry,” *New London Day*, January 3, 2022.

Appendix E. 1987-1988 Letters and Statements from Members Regarding Canadian SSN Project

The following are the texts of letters and statements from Members of Congress in 1987 and 1988 regarding Canada's proposed SSN acquisition project, which Canada canceled in 1989.

1987 Letter from Representative Charles E. Bennett

A November 3, 1987, letter from Representative Charles E. Bennett, Chairman, Seapower and Strategic and Critical Materials Subcommittee, House Armed Services Committee,¹⁶⁸ to Secretary of Defense Caspar W. Weinberger stated

I would like to comment on Secretary of Energy [John S.] Herrington's letter to the committee of October 28, 1987 concerning the Statutory Determination signed by both of you regarding transfer of information by the U.K. to Canada about nuclear propulsion.

In addition to considering the potential defense benefits that a force of Canadian [nuclear-powered] submarines might offer to the West, I believe it is also important for the United States to keep in mind some of the possible drawbacks such a program might involve. One, of course, is the issue of the use of such vessels for enforcement of the disputed Canadian claim of sovereignty over the Northwest Passage. Another is the danger of compromise of our nuclear [propulsion] technology, one of our most prized achievements. And third is the fact that a mishap involving a Canadian nuclear submarine could undermine the public confidence necessary for the successful operation of our own nuclear [-powered] Navy, [which accounts for] over 40 percent of our ships.

I have recently had an "op-ed" piece published on this matter in the Toronto *Globe and Mail*, which I am enclosing.¹⁶⁹ I hope you will find these views helpful as you continue your deliberations on this important issue. I have sent a similar letter to Secretary Herrington.

1987 Letter from Representative Melvin Price

A November 5, 1987, letter from Representative Melvin Price¹⁷⁰ to Secretary of Defense Caspar W. Weinberger and Secretary of Energy John S. Herrington stated

I have recently learned that the Government of Canada is seeking access to U.S. naval nuclear propulsion technology via the United Kingdom. Apparently Canada wants to develop its first nuclear submarine. Since Congress and previous administrations have considered similar proposals in the past from other countries, I believe it is important that I convey to you the thoughts expressed in this letter.

As a charter member and former chairman of the Joint Committee on Atomic Energy, I was privileged to participate in the shaping of our national Naval [nuclear] Propulsion Program. The safety and performance record of our nuclear [-powered] ships is the payoff for engineering excellence. We gained our naval nuclear propulsion technology by

¹⁶⁸ Charles E. Bennett was a Member of Congress from January 3, 1949 to January 3, 1993. (Source: <https://bioguide.congress.gov/search/bio/B000371>.)

¹⁶⁹ Charles E. Bennett, "Tough Questions Rise to the Surface," *Globe and Mail*, October 29, 1987.

¹⁷⁰ Melvin Price was a Member of Congress from January 3, 1945 until his death on April 22, 1988. He was Chairman of the Joint Committee on Atomic Energy in the 93rd Congress (1973-1974) and Chairman of the House Armed Services Committee in the 94th through 98th Congresses (1975-1984). (Source: <https://bioguide.congress.gov/search/bio/P000522>.)

spending taxpayer dollars wisely under highly disciplined managerial and technical direction.

It is important to appreciate that there is nothing new about an ally wanting our naval nuclear propulsion technology—or about the consistently strong U.S. policy against its releases. Over the years, we have turned down requests from a number of countries, including France, Italy, and the Netherlands. Heretofore, the United States’ position has been clear and firm.

As you know, applicable law tightly controls any disclosure of naval nuclear propulsion technology. Congress authorized the 1958 DREADNOUGHT¹⁷¹ agreement with Great Britain only because of special circumstances. The British, having already embarked in developing their own naval nuclear propulsion plant, encountered problems and requested the assistance of the United States. The United States decided to help in nuclear propulsion and provide nuclear weapons technology because we needed to have British nuclear submarines and weapons on line in a strategic location at the earliest date. We also took into account the special relationship we had with the British and our close cooperation on nuclear matters during the war [i.e., World War II], including the Manhattan project.

Technical data alone did not prove to solve Britain’s problems, so the United States ended up providing an entire U.S. nuclear propulsion plant. U.S. assistance, however, was limited to the propulsion plant on the lead ship to help ensure that the United Kingdom would not become dependent on the United States. We considered the requirement for self-sufficiency to be essential for the establishment of the type of discipline necessary for the safe application of naval nuclear propulsion. In addition to strict security precautions, the agreement provides that this technology may not be transferred to third parties without prior U.S. approval.

Over the years, earnest diplomats have urged that we share our sensitive nuclear submarine technology for purposes of worthwhile objectives. Congress rejected those proposals, recognizing the significant differences between exporting sensitive nuclear propulsion and exporting airplanes or tanks. It is one thing to share very sensitive intelligence between two allies; quite another to expose in a commercial environment the technology that has enabled us to hold a military advantage over a much larger Soviet submarine fleet.

Your decision to authorize the United Kingdom to release certain naval nuclear propulsion information to Canada is a softening of U.S. policy and invites further interest by Canada and similar propositions from other nations. The considerations that persuaded us to grant an exception for the British simply do not exist today with respect to Canada or other allies.

In one of its last reports, (Naval Nuclear Propulsion Program—1970) the Joint Committee on Atomic Energy addressed this issue succinctly:

“The Joint Committee noted with concern the testimony regarding persistent efforts of elements within the Executive Branch to disseminate sensitive and strategically vital U.S. naval nuclear propulsion technology among foreign governments as diplomatic ‘currency’ in cooperative arrangements of marginal military value. The committee has reviewed the arguments favoring such cooperation repeatedly in the past, and has found them lacking in appreciation for both the technical complexities and strategic value of this critical technology.”

“The committee strongly recommends that no further consideration be given to cooperative arrangements in the field of naval nuclear propulsion for the indefinite future.”

The Joint Committee’s recommendation is as sound today as it was then.

¹⁷¹ The UK’s first nuclear-powered submarine—the one built with a transferred U.S. Navy submarine propulsion plant—was HMS Dreadnought.

Incidentally, the bilateral agreement with Canada on Cooperation for Mutual Defense Purposes, in paragraph E of Article II which you are proposing to implement, states that the “extent” and “means” of the exchange of classified information are to be agreed upon by the U.S. and Canada, presumably in advance. In view of the extreme sensitivity of this matter, if and when such agreement is reached it should be submitted to the Armed Services Committees of both Houses of Congress.

In any event, I want to state unequivocally my opposition to the transfer of any U.S. naval nuclear propulsion technology to Canada, because I believe it would be contrary to the best interests of our own submarine program and our national security.

1988 Exchange at Hearing Involving Senator J. James Exon

At a March 21, 1988, hearing before the Senate Armed Services Committee to consider the nomination of William Ball III to be Secretary of the Navy, the following exchange occurred between Ball and Senator J. James Exon, the chairman of the Strategic Forces and Nuclear Deterrence subcommittee of the Senate Armed Services Committee.

SENATOR EXON [addressing Ball]: I’m going to ask you about another subject now that we talked about when you were in to see me a few days ago. Senator Warner and I will definitely be on the floor this week raising some questions publicly about the matter that we discussed with regard to the Canadians wishing to acquire our nuclear submarine technology that we share only with Britain. The Canadians are trying to get into an arrangement with regard to the British providing them with nuclear submarines and some training.

There have been many other discussions with them [the Canadians] regarding why don’t they work into this gradually. They want to go into it as a crash program. There are some serious concerns in this area with regard to the safety, and what that might do to the whole nuclear submarine program. Certainly before any arrangement is made on this, which seems to be about to happen, the Congress should review it. I have talked to several people about this including the Chairman of the Joint Chiefs [of Staff] and the general consensus I obtained was well, is that this is a political situation that we don’t see we can stop.

The Congress has a role to play in this because as you know it is [written] into the law that nothing like this can happen if the Congress wants to stop it. There are some of us that want to know a great deal more about this than we know right now, including Senator Warner and myself and others that I have mentioned. I think it would be very appropriate if you would give us what views you have on this subject before you become Secretary of the Navy.

MR. BALL: Senator, let me mention that I understand that the Canadian Defense Ministry has first of all put together a white paper that sets forth a number of areas where they wish to improve their forces. At the outset let me say that having reviewed that effort, the [U.S.] Navy is exceedingly high on the concept of the Canadians investing more in certain areas, such as maritime patrol aircraft and the construction of new frigates and other areas where we have a good and strong relationship, and we feel that those kinds of initiatives are going in the right direction.

The Navy does have some concerns, and I’ve not had an opportunity to speak with everyone in the Navy who would have an interest in this yet, but the Navy leadership does have some concerns about sharing nuclear power technology which members of this committee are very familiar with.

The ultimate decision on this question I imagine will be made by Congress. Prior to there being any decision taken by the administration I am sure there will be a healthy review of all aspect of this. There are political questions involved, there are also military questions

involved, and that will be, I'm sure, extensively discussed before a recommendation is taken to the President.¹⁷²

A March 22, 1988, press report about the hearing stated

After the hearing, [Senator J. James] Exon and fellow committee member Sen. John Warner (R-Va.) said in an interview that the [Canadian SSN] project is a dangerous technological and political gamble for Canada and the United States.

Both said they plan to take the matter to the Senate floor within a few days to spotlight what they termed the dangers.

“Any minor accident with the nuclear power plant could result in our own nuclear-powered vessels being barred from 80 percent of the world’s ports,” Exon said. “If we let Canada have this secret nuclear technology, what do we say to the next ally who wants it?”¹⁷³

1988 Floor Statement from Senator J. James Exon

The *Congressional Record* for March 25, 1988, includes the following floor statement from Senator Exon.

THE PROPOSED TRANSFER OF UNITED STATES NUCLEAR SUBMARINE TECHNOLOGY TO CANADA

Mr. EXON. Mr. President, I rise today to voice my concern regarding the proposed transfer of United States nuclear submarine technology to Canada. Let me state up front that I am not necessarily opposed to such a transfer. However, I do have a number of concerns which I would like to explore in hearings when and if this proposed transfer is sent to the Congress for our approval.

In its 1987 “Defence White Paper,” our good ally and very close friend, Canada, expressed a commitment to acquire 10 to 12 nuclear-powered submarines. Canada does have diesel-electric submarines in its fleet today but is opting for nuclear propulsion for its future submarines. The rationale for this is that Canada must patrol three oceans, the Pacific, Atlantic, and Arctic, and only nuclear-powered submarines have the speed, endurance, and the ability to safely operate under ice.

The wisdom of this decision is not one for our Nation to yield to the Canadian on. It is not for this Nation to determine what should be the proper course of action to our friend and ally to the north. There are good arguments for the Canadians to spend an awful lot of money on this proposition but at the same time I think we could legitimately ask the question of our key supporter in NATO whether or not it is wise for them to spend \$8 billion of their defense dollars for a fleet of 10 to 12 nuclear submarines.

Indeed, I personally welcome the recent acknowledgment by the Canadians that they should be doing more for their own defense and in contribution to NATO. The concern of the United States should focus, in my opinion, on whether or not we wish to transfer nuclear

¹⁷³ George C Wilson, “Transfer of U.S. Nuclear Sub technology Considered,” *Washington Post*, March 22, 1988, p. 4. The article was published in other editions of the paper with the headline “U.S. Considers Transfer of Secret Sub Technology.”

submarine technology to another nation. We have done so only once in the past, to the British, who now operate 19 nuclear submarines of their own. Great Britain is a special friend and ally with whom we have very close defense ties. We enjoy similar ties with the Canadians.

My specific concern, however, has to do with whether Canada fully recognizes and can afford the extensive infrastructure of training and support facilities to ensure that our transferred technology will be operated safely. Mr. President, more and more ports of the world are being closed to the U.S. Navy for reasons of antinuclear sentiment around the world. From New Zealand to the Philippines to Northern Europe, we are faced with a serious challenge to the continued operation of and support for the necessary presence of the U.S. Navy. In short, in this era of nuclear phobia, we must maintain and enhance our safe standards of shipboard nuclear propulsion.

Our Navy has had over 34 years experience with nuclear-powered ships and we have had no accidents. This is the result of a very careful training program, very stringent operating procedures, and shipyards and workers highly skilled in nuclear technology.

For Canada, nuclear-powered ships will be a new experience. Although the Canadians considered acquiring nuclear subs in the early 1960's and began an exchange program with the United States and Royal Navies on the matter, the proposed submarines would be Canada's first nuclear-powered ships. To be fair, the Canadians do operate nuclear powerplants and their safety record is good. But submarines are different.

Canada's Navy is indeed impressive in its professionalism and technology. Its record is long and admirable. In fact, the Royal Canadian Navy was the third largest navy in the world at the end of World War II. We have worked long and closely with the Canadians in the area of nuclear weapons and defense. That is a sound relationship which could be expanded if it proves prudent to do so.

But Mr. President, I want to be absolutely sure that the Canadians understand the tremendous responsibility they assume when they acquire nuclear submarines.

If they should ever experience a nuclear accident or incident, the blame, rightly or wrongly, could be transferred by the United States. Rightly or wrongly, our Nation as well as Canada, could and probably would bear the consequences. We could see more ports around the world closed to our nuclear powered or nuclear armed ships. This is the heart of my concern. With 40 percent of our naval forces nuclear, any nuclear-powered accident, however minimal, would be blown all out of proportion and we would very likely find a "Not Welcome" sign posted more prominently in more ports where it is vital for our ships to port if they are to perform their critical mission.

So before we either transfer nuclear power technology or allow the British to transfer the technology we initially provided to them, I will pursue this matter very carefully in the hearings in the Armed Services Subcommittee on Strategic Forces and Nuclear Deterrence.

This subcommittee, which I chair, has oversight responsibility for our Navy's Nuclear Propulsion Program. I have already discussed this issue with Secretary of Defense Frank Carlucci, Secretary of State George Shultz, and other officials of our Defense and Navy Departments. I think they understand and share my concerns.

I want to alert all that, should the administration decide to transfer this technology, the Senator will exercise his right and responsibility to review and act on such a decision. This is a decision that thus far has been pursued without congressional consultation. I am also fearful that the administration has not addressed the fundamental question that if we authorize the British to transfer our highly classified and closely held naval nuclear technology to the Canadians, how can we justify keeping this from other allies?

This is the decision that has thus far been pursued by the administration simply on their own without consultation with Congress. I am also fearful that the administration has not

addressed the fundamental question: If we authorize the British to transfer our highly classified and closely held technology in this area to the Canadians, how, Mr. President, can we justify keeping this from our other allies?

I am pleased and delighted to see my good friend [Senator John Warner], working colleague, the Senator from Virginia, former Secretary of the Navy, and the ranking member of the Armed Services Committee is here on the floor. He has expressed similar sentiment. And without objection, I would like to yield to the Senator from Virginia at this time. [See floor statement below from Senator John Warner.]¹⁷⁴

1988 Floor Statement from Senator John Warner

Immediately following the statement from Senator Exon quoted above, the *Congressional Record* for March 25, 1988, includes the following floor statement from Senator John Warner, the ranking member of the Senate Armed Services Committee.

The PRESIDING OFFICER. The Senator from Virginia is recognized.

Mr. WARNER. I thank my distinguished colleague.

Mr. President, the Senator from Nebraska [Senator Exon], and I came to the Senate some 9 years ago, and we have sat side by side at the table of the Senate Armed Services Committee, where he succeeded me as the chairman of an important subcommittee, the Subcommittee on Strategic Forces and Nuclear Deterrence.

He speaks with considerable knowledge on all subjects relating to nuclear power, and in particular on this one.

Mr. President, on March 15 I had an opportunity to attend a breakfast meeting with members of the British press. During the course of that breakfast, we discussed the current proposal of the Canadian Government to manufacture nuclear-powered submarines. This is an ambitious undertaking. Simply stated, it entails the building and operating of one of the most complicated and costly weapons platforms in the world.

It has come to my attention that portions of that morning's discussion have been reported in the British press in a way that might imply that I have reached a final decision to oppose this Canadian proposal. I have not made a decision, but take this opportunity to state my present concerns, along with my distinguished colleague, the Senator from Nebraska [Mr. Exon.] The United States executive and legislative branches should weigh these concerns when viewing Canada's proposal to acquire a nuclear submarine fleet by the year 2010, because those submarines might incorporate restricted United States technology. I plan to take an active role in the congressional debate.

In June of 1987, the Canadian Government issued a White Paper on defense proposing the acquisition of 10 to 12 nuclear-powered submarines. Canada is currently considering options of either acquiring the British Trafalgar-class submarine design or the French Rubis-class submarine design. Since the Trafalgar-class nuclear propulsion technology is a derivative of designs and equipment supplied to the British by the United States in the late 1950's, United States approval-including congressional consent-is required prior to transfer from Great Britain to Canada of this technology.

The role of Congress in any transfer of naval nuclear propulsion technology is set forth in the Atomic Energy Act of 1954, as amended. That act provides for a 90-day notice-and-wait period, during which Congress has the opportunity to hold hearings—which our

¹⁷⁴ *Congressional Record*, March 25, 1988, pp. 5293-5294.

distinguished chairman and I recommend—and, if it chooses, to pass a joint resolution of disapproval.

As a former Secretary and Under Secretary of the Navy (1969-74), I am familiar with the enormous complexities and special requirements of nuclear submarine technology and procedures. I was involved with the development, design approval, acquisition, and continuing infrastructure needed to support nuclear-powered vessels, particularly the SSN-688 class attack boats and the initiation of the Trident program; and also had responsibility for developing and supporting before the U.S. Congress the budgets required to support these programs. I have an appreciation, both in that capacity and today as a member of the Armed Services Committee, of the potential for the enormous cost overruns that often accompany nuclear construction programs.

Just recently, the problem of the current cost overruns with the [Los Angeles] [SSN-]688 class [nuclear-powered attack submarines], both past and present, were brought to the attention of the Armed Services Committee. A news article reported that the cost to complete construction of 23 Los Angeles (SSN-688) class submarines might be \$1.2 billion above contract target costs.

The U.S. Congress knows from decades of experience that the costs associated with ocean-going nuclear vessels are enormous, encompassing not just development and acquisition, but also constant training and elaborate supporting shore establishment and overhaul facilities. Let there be no misunderstanding: This is an enormously complex and costly matter, and no nation should enter into such an undertaking without an exhaustively thorough appreciation for those complexities and costs. Congress will carry certain responsibilities as assigned by the Atomic Energy Act of 1954, should the Canadians desire the British submarine design. With the benefit of knowledge derived from our own experience, Congress must conscientiously and fairly examine the Canadian proposal, in our own national security interests. We need to know how Canada proposes to institute this program; and how Canada proposes to insure, as my distinguished chairman mentioned, that the standard of nuclear safety of such a fleet will be at least as high as that of the United States and the British in the operation of their fleets.

Additional questions should be raised. For example, the Soviets have introduced eight new attack submarine designs within the last 10 years and have accelerated the rate at which they are reducing the noise levels of their submarines. Soviet technological advances are expected to continue. The Soviets are pouring unrestricted sums into their submarine program. Will the Trafalgar or the Rubis designs—if one or the other is selected for the Canadian submarine force—will they be sufficiently quiet and combat capable to produce a credible force against the likely increase in capability of the Soviet submarine fleet? That Soviet force will be entering operation in the late 1900's and beyond and would be in direct competition with any such submarines as Canada may have operating in its Arctic waters.

Canada is a close ally and trusted friend. We need not mention that here. Canada is a sovereign nation, entitled to decide how it will allocate its defense resources. As an ally, it is the responsibility of the United States to give such advice as may be requested—I repeat, advice as may be requested—to assist Canada in structuring its proposal. It is my understanding that the administration is now cooperating with Canada and Great Britain to ascertain the scope of United States technology involved; and it is my expectation and hope that the United States will share in every other respect our experience, both cost and otherwise, in operating our submarine force.

In the past, other allies have made inquiries of the United States for assistance in developing nuclear submarine programs and, with the exception of Great Britain, this assistance has not been provided. This newest proposal would involve changing U.S. policies and procedures developed over the years for the transfer of naval nuclear propulsion technology.

Mr. President, let me make my position clear. I have not yet taken a position in opposition to the transfer of this nuclear technology to Canada. I now alert the Congress, however, to the magnitude of the decision it may be asked to make. I am simply reserving my judgment until all inter-government discussions are completed, both the United States and the Canadians have a thorough understanding of the implications of this undertaking, together with Great Britain, and the administration, if it so elects, petitions the Congress.

Mr. President, I also ask unanimous consent to have printed in the RECORD the relevant provisions of the Atomic Energy Act concerning the role of Congress in this procedure. This is set forth in the Atomic Energy Act of 1954, as amended (42 U.S.C. 2152), paragraphs c and d.

There being no objection, the material was ordered to be printed in the RECORD, as follows:...

¹⁷⁵ *Congressional Record*, March 25, 1988, pp. 5294-5295.

Appendix F. October 25, 2023, Navy Testimony on Increasing Capacity of Submarine Industrial Base

At an October 25, 2023, hearing on the submarine industrial base and its ability to support the AUKUS framework before the Seapower and Projection Forces Subcommittee of the House Armed Services Committee, the Navy testified on its efforts (and associated funding) for increasing the capacity of the submarine construction industrial base to support a construction rate of one Columbia-class ballistic missile submarine (SSBN) per year plus 2.33 Virginia-class attack submarines (SSNs) per year (i.e., a “1+2.33” rate). This is the rate, the Navy testified, that would be sufficient to meet both U.S. Navy needs and needs under the AUKUS agreement for building SSNs while also building Columbia-class SSBNs for the U.S. Navy. The Navy’s testimony stated

Submarine Industrial Base (SIB)

The US Submarine Force and our SIB [submarine industrial base] are crucial to the security of our Nation, and maintaining overmatch in the Undersea Warfare domain is one of the top priorities in the Department of Defense. Submarines, therefore, are one of the most important battle force vessels in our Navy. Forward deployed, combat-credible attack submarines project US decisive naval power essential in today’s security environment. Construction and sustainment of our submarine force is complex, difficult, and requires a continuous focus on safety and nuclear stewardship. Our SIB is supporting the largest submarine recapitalization effort in nearly 50 years and at a time when American manufacturing and shipbuilding capacity has atrophied by more than 60 percent since the end of the Cold War.

The US is simultaneously replacing our strategic Ballistic Missile Submarine (SSBN) force with the COLUMBIA Class, transitioning our SSN force from LOS ANGELES to VACL [Virginia class], and replacing our Guided Missile Submarine (SSGN) capability¹⁷⁶ with ‘strike optimized’ VIRGINIA Payload Module (VPM) submarines. VPM includes a new hull section with additional vertical launch tubes for conventionally armed missiles to the VACL submarine design. Adding AUKUS requires us to improve our new-construction and sustainment efforts to ensure we meet our domestic requirements while supporting the trilateral partnership. Both our SIB uplift effort and the AUKUS program are executing aggressive and deliberate schedules designed to meet our national security needs. Continued partnership with Congress is foundational to our collective success in these two generational opportunities. The SIB, consisting of our public shipyards and two prime shipbuilders, General Dynamics Electric Boat (GDEB) and Huntington Ingalls Industries Newport News Shipbuilding (HII-NNS), along with the 16,000 suppliers (5,000 direct contractual relationships and 11,000 sub-tier vendors) across the country, support both our new-construction submarines and sustainment of the in-service submarine fleet.

It has been nearly 50 years since the US ramped-up its submarine construction capability and infused equivalent volumes of complexity and work into the industrial base. Following the Cold War, the country underwent significant shifts in economics and culture, punctuated by a clear transition from a manufacturing-based economy to a services-based economy. This pivot undermined foundational industrial capabilities and capacities and

¹⁷⁶ This is a reference to the first four Ohio (SSBN-726) class SSBNs, which were converted into cruise missile and special operations forces (SOF) submarines (SSGNs). The four conversions were completed in 2005-2007. The SSGNs are to reach their ends of their service lives and be retired in FY2026-FY2028. For more on the SSGN conversion program, see CRS Report RS21007, *Navy Trident Submarine Conversion (SSGN) Program: Background and Issues for Congress*, by Ronald O'Rourke.

challenged our ability to maintain the sufficiently skilled and sized workforce needed for a resilient and robust SIB.

In FY 2018, with leadership and support from Congress, the DON began infusing funding into the SIB to increase capability and capacity at new and existing suppliers to meet growing demand and increase resilience across the supply chain. In October 2020, the DON established the SIB Program within the Program Executive Office for Strategic Submarines (PEO SSBN). The SIB Program, in partnership with the Office of the Secretary of Defense Industrial Base Analysis and Sustainment program, is executing a holistic strategy to expand and strengthen the SIB by investing in six key areas: shipbuilder infrastructure, supply chain capability/capacity, scaling new technologies, addressing workforce trade skill gaps and constraints, expanding capacity via strategic outsourcing, and government oversight of expanded industrial base efforts.

The AUKUS partnership provides an unprecedented opportunity to leverage the capabilities of our partner nations, strengthen our defense industrial bases, create jobs, and drive innovation across our SSN force. AUKUS relies on a strong SIB that designs, delivers, maintains, and modernizes our apex predators of the oceans – SSNs. Our domestic industrial base will benefit from the industrial capabilities of our partner nations, such as joining with an Australian company to mature and scale metallic additive manufacturing across the SIB. Ultimately, AUKUS will increase commonality, interoperability, and therefore, warfighting lethality across our three submarine forces.

Australia’s investment into the US SIB builds upon on-going efforts to improve industrial base capability and capacity, create jobs, and utilize new technologies. This contribution is necessary to augment VACL production from 2.0 to 2.33 submarines per year to support both US Navy and AUKUS requirements. Through sustained investment, consistent with our ongoing strategy, the ultimate goal is to increase repair capacity and capability of US shipyards to get more SSNs out of maintenance and back to the Fleet. AUKUS also presents a unique demand on the US SIB requiring a “Whole of Government, Whole of Industry” approach to achieve and sustain pace, including supporting both US and partner nation efforts.

Submarine Construction:

The current submarine construction rate, coupled with systemic challenges facing the US SIB, resulted in the current annual production rate of 1.2 to 1.3 VACL SSNs per year, compared to the goal of 2.0 VACL SSNs per year. This SSN construction rate, coupled with COLUMBIA Class SSBN serial production starting in FY 2026 (pending Congressional authorization and appropriations) is what we call “1+2,” for the one COLUMBIA Class SSBN and two VACL SSNs per year.

The recapitalization process to achieve the 1+2 cadence increases the demand on the US SIB by a “workload equivalent” factor of five by 2028. 2015 was the last year the Navy was scheduled to deliver one VACL SSN (1.0). One COLUMBIA Class SSBN represents approximately 2.5 VACL SSNs in terms of build resources (manning) and tonnage. The addition of the VPM design equates to 1.25 legacy (2015) VACL SSNs. Thus, a 1.0 build rate from 2015 becomes 5.0 in 2028 to achieve 1+2 cadence (2.5 + (1.25 + 1.25)). The DON’s submarine builders, GDEB and HII-NNS, and their supporting supplier base are working to achieve this 1+2 rate in 2028 by investing in workforce development and retention efforts, increasing capacity and capability through infrastructure and equipment upgrades, and partnering with the DON to mature and scale advanced manufacturing technology throughout the SIB....

SIB Recapitalization

The recapitalization of the US Submarine Force, plus the investment in AUKUS, requires continued and significant investments in US facilities, infrastructure, and workforce. Our

SIB recapitalization effort creates large numbers of hands-on jobs across the nation. Targeted workforce growth includes, but is not limited to:

- Trades – Welders, Shipfitters, Electricians, Machinists, Pipefitters, Painters, and Electronics Technicians.
- Supporting Disciplines – Planners, Estimators, Material Managers, Contract Specialists, Information Technology Experts, Quality Assurance Specialists, and Project Leaders.
- STEM – Structural, Electrical, Mechanical, and Nuclear Engineers; Designers; Test Coordinators; Metallurgists; Computer Scientists; Logisticians; etc.

Significant investments into the submarine supplier base will produce increased volume of basic materials, specialized materials, and engineered components required for modern nuclear-powered submarine construction, such as:

- Steel and specialty metals.
- High-tech castings and forgings.
- Electrical components.
- Combat Systems.
- Propulsion Plant components.
- Valves, pumps, pipes, fittings, and fans.
- Software and information systems.

In partnership with Congress, the Office of the Secretary of Defense and the DON made substantial SIB investments, with \$2.3 billion across FY 2018 through FY 2023 currently in execution and \$1.6 billion planned for FY 2024 through FY 2027. There is also an additional \$2.2 billion for submarine sustainment efforts submitted in the President's Budget for FY 2024 through 2028. This much-needed resourcing is purposefully designed to help build and strengthen SIB capacity, capability, and resilience. These resources are primarily being utilized across six lines of effort, and are needed to support efforts to increase submarine construction and sustainment rates:

1. Supplier Development: Add capability and/or capacity to existing suppliers, reduce single/sole-source risks for resiliency and robustness, improve first time quality.
2. Shipyard Infrastructure: Accelerate investments in shipbuilder facilities, footprint, and machines/fixtures.
3. Strategic Outsourcing: Increase supplier capacity to shift non-core workload away from the two submarine shipbuilders to free up footprint, resources, and focus for shipbuilder-only work.
4. Workforce Development: Train current and future trades at sufficient rates, and help build adequate hiring pool for vendors and shipbuilders.
5. Government Oversight: Increase the Navy's oversight of the vendor base as result of lessons learned from historical quality and schedule adherence challenges.
6. Technology Opportunities: Implement additive manufacturing, and non-destructive test imaging technology to remove known production risk areas and bottlenecks.

The DON began execution of these SIB efforts several years ago as building facilities, growing workforces, and increasing production rates takes time. Our dividends are not fully matured yet. Some of the significant returns on this investment include:

- 194 suppliers in 31 states received funding to generate increased production and increase capacity.

- Approximately 4 million hours strategically sourced by EB and HII-NNS to key fabricators (goal is at least 6 million hours by 2026).
- Approximately 1,000 new workforce members in more than 120 second and third-tier key suppliers with more to come each year.
- Establishment of dedicated training centers trained more than 3,500 workers since 2020.
- Establishment of an industry-wide consortium for advanced manufacturing technology supplying critical submarine components from 6 crucial submarine-specific metals contributing to 75-percent of troubled submarine components.

The DON also worked with a non-profit partner to develop the workforce recruiting and support website, “Build Submarines.com.” This site serves as a central hub of information to support workforce development efforts related to our national advertising campaign for the SIB including resources for those interested in submarine construction or SIB related careers. The DON is on a mission to make ship and submarine manufacturing a preferred profession again and it is a national imperative.

Deepening our cooperation and integration with AU [Australia] and the UK across the submarine enterprise presents a unique opportunity for innovation, growth, and mutual development. The partnership will create jobs, contribute to the diversification of ideas, and augment our collective technical and intellectual base. The partnership will also open up new markets and business opportunities, enhancing the resilience of both nations’ economies. This will pave the way for additional joint ventures, thereby fostering a shared sense of purpose, knowledge exchange, and a more connected community of subject matter experts.¹⁷⁷
