# Medical Records Privacy: Questions and Answers on the HIPAA Final Rule

C. Stephen Redhead Specialist in Life Sciences Domestic Social Policy Division

### **Summary**

As of April 14, 2003, health plans and health care providers and their business associates must be in compliance with new federal regulations to protect the privacy of medical information. Plans and providers must provide enrollees and patients with a notice explaining their privacy rights and how their information will be used. The privacy rule gives patients the right to inspect and copy their medical records. Plans and providers are permitted to use and disclose health information for routine health care operations and for various specified national priority activities (e.g., law enforcement, public health, research). Providers may also share certain information with family members and others, provided the patient is given the opportunity to object. Prior written authorization is required for most other uses and disclosures. Plans and providers are required to have in place reasonable safeguards to protect the privacy of patient information and limit the information used or disclosed to the minimum amount necessary to accomplish the intended purpose of the use or disclosure. Entities that fail to comply with the rule are subject to civil and criminal penalties, but patients do not have the right to sue for violations of the rule. The health privacy rule does not preempt, or override, state laws that are more protective of medical records privacy.

#### Introduction

As of April 14, 2003, health plans and health care providers and their business associates must be in compliance with the federal health information privacy regulation. The privacy rule gives patients the right of access to their medical information and prohibits health plans and health care providers from using or disclosing individually identifiable health information without a patient's written authorization except as expressly permitted or required by the rule. For routine health care operations, including treatment and payment, plans and providers may use and disclose health information without the individual's authorization and with few restrictions. In certain other circumstances (e.g., disclosures to family members and friends), the rule requires plans and providers to give the individual the opportunity to object to the disclosure. The rule also permits the use and disclosure of health information without the individual's

permission for various specified activities (e.g., public health oversight, law enforcement) that are not directly connected to the treatment of the individual. For uses and disclosures that are not permitted by the regulation, plans and providers must obtain a patient's written authorization.

The privacy rule is having an important and visible impact on the administration of health care. Anyone enrolling in a health plan, picking up a prescription, or entering a doctor's office or hospital must be given a notice that describes their rights under the rule and explains how the plan or provider intends to use or disclose their health information. For their part, health plans and health care facilities must have in place reasonable administrative, technical, and physical safeguards to protect patient information from intentional or unintentional uses or disclosures that are in violation of the rule.

The health privacy rule is one of several new standards mandated by the 1996 Health Insurance Portability and Accountability Act (HIPAA) to support the growth of electronic record keeping and claims processing in the nation's health care system. The intent of the legislation is to improve the efficiency and effectiveness of health care by facilitating the electronic interchange of health information. On August 17, 2000, the Secretary of Health and Human Services (HHS) issued standards for several electronic health care transactions between plans and providers (e.g., claims for payment), including the use of uniform data codes for reporting diagnoses, referrals, authorizations, and medical procedures. The compliance deadline for the transactions and codes standards is October 16, 2003. On February 20, 2003, the Secretary published security standards to ensure the confidentiality, integrity, and availability of electronic health information. Most plans and providers have until April 21, 2005, to comply with the security standards.

The growing use of networked, electronic health information has raised serious privacy concerns among the public. Patients are increasingly worried about who has access to their medical information without their express consent. They fear that their personal health information will be used to deny them employment or insurance. HIPAA gave Congress until August 21, 1999, to enact comprehensive health privacy legislation, otherwise the HHS Secretary was instructed to develop health privacy standards. When Congress missed its self-imposed deadline, the Secretary proposed health privacy standards on November 3, 1999, and published the final rule on December 28, 2000. Modifications to the privacy rule were published on August 14, 2002.

## **Questions and Answers about the Health Privacy Rule**

Who is Covered? As specified under HIPAA, the privacy regulation applies to three groups of entities: (i) individual and group health plans that provide or pay for medical care; (ii) health care clearinghouses (i.e., entities that facilitate and process the flow of information between health care providers and payers); and (iii) health care providers who transmit health information electronically in a standard format in connection with one of the HIPAA-specified transactions, or who rely on third-party billing services to conduct such transactions. The rule, therefore, does not apply directly to other entities that collect and maintain health information such as life insurers, researchers, employers (unless they are acting as providers or plans), and public health officials. However, business associates with whom covered entities share health information are covered. Business associates include persons who provide legal, actuarial, accounting, data aggregation, management, administrative, accreditation, or

financial services to or for a covered entity. The rule permits a covered entity to disclose health information to a business associate or to allow the business associate to create or receive health information on its behalf, provided both parties sign a written contract that essentially binds the business associate to the covered entity's privacy practices.

What Types of Health Information are Covered? The rule covers all individually identifiable health information that is created or received by a covered entity, including genetic information and information about an individual's family history. It applies to both paper and electronic records, as well as oral communications. Non-identifiable health data, from which all personal identifiers have been removed, are not subject to the rule.

Can Patients Access and Amend their Health Information? Yes, covered entities must allow patients to inspect or obtain a copy of their health information, except in certain limited circumstances. Covered entities may charge a reasonable, cost-based copying fee. Patients may also request amendment or correction of information that is incorrect or incomplete. Finally, patients have the right to receive a detailed accounting of certain types of disclosures of their health information made by covered entities during the past 6 years. Disclosures for routine health care operations and those made pursuant to an authorization (see below) are exempt from the accounting requirement.

#### **How May Plans and Providers Use and Disclose Patient Information?**

The privacy rule imposes certain restrictions on when and how health plans and health care providers may use and disclose medical information. Plans and providers may use and disclose health information for treatment, payment, and other routine health care operations (TPO) without the individual's permission and with only a few restrictions. Patients have the right to request that covered entities restrict the use and disclosure of their health information for TPO, but covered entities are not required to agree to such a request.

The privacy rule also permits the disclosure of health information without a patient's authorization for various specified national priority activities, consistent with other applicable laws and regulations. First, disclosures may be made for **public health** purposes (e.g., reporting diseases, collecting vital statistics), as required by state and federal law. Second, health information may be disclosed to public agencies to conduct **health oversight** activities such as audits; inspections; civil, criminal, or administrative proceedings; and other activities necessary for oversight of the health care system. Third, disclosures may be made to **law enforcement** officials pursuant to a warrant, subpoena, or order issued by a judicial officer, or pursuant to a grand jury subpoena. Disclosures for law enforcement purposes are also permitted pursuant to an administrative subpoena or summons where a three-part test is met (i.e., the information is relevant, the request is specific, and non-identifiable information could not reasonably be used). Fourth, health information may be disclosed in **judicial and administrative proceedings** if the request for the information is made through or pursuant to a court order. Fifth, covered entities may disclose health information to **researchers** without a patient's authorization,

provided an Institutional Review Board (IRB) or an equivalent, newly formed "privacy board" reviews the research protocol and waives the authorization requirement.<sup>1</sup>

Additionally, health information may be disclosed without authorization: (i) to coroners, medical examiners, and funeral directors; (ii) to workers' compensation programs; (iii) to a government authority authorized to receive reports of abuse, neglect, or domestic violence; (iv) to organizations in order to facilitate organ, eye, and tissue donation and transplantation; (v) to government agencies for various specialized functions (e.g., national security and intelligence activities); (vi) to avert a serious threat to health or safety; (vii) and in other situations as required by law.

For the most part, the privacy rule addresses *permissible* uses and disclosures. HHS expects covered entities to rely on their professional judgement in deciding whether to permit the use or disclosure of health information covered under the rule. Covered entities are *required* to disclose information only to the individual who is the subject of the information and to HHS for enforcement of the regulation. For all uses and disclosures of health information that are not otherwise required or permitted by the rule (e.g., releasing information to financial institutions that offer mortgages and other types of loans, or selling mailing lists to marketing companies), covered entities must obtain a patient's written authorization.

Authorization forms must contain certain specified core elements including a description of the health information to be used or disclosed and the identity of the recipient of the information. In general, a covered health care provider may not condition the provision of treatment on receiving a patient's authorization. Health plans may condition enrollment or eligibility for benefits on the provision of an authorization prior to an individual's enrollment in the plan. Patients may in writing revoke their authorization at any time.

#### Can Medical Information be Shared with a Patient's Family or Friends?

The rule permits covered entities to disclose information to a family member, relative, close friend, or other person identified by the individual. Only information that is directly relevant to such person's involvement with the individual's care may be shared. If the individual is present and able to make health care decisions, the covered entity may disclose information if the patient has been given, in advance, the opportunity to object to any disclosures, or the covered entity reasonably infers that the patient does not object. When the patient is not present, the covered entity may use its professional judgment and experience with common practice in deciding whether a disclosure is appropriate. A pharmacist, for example, may allow a family member or other individual to pick up someone's prescription.

Does the Rule Block Access by Parents to a Minor's Information? Generally, a parent is deemed to have the rights associated with a minor's health

<sup>&</sup>lt;sup>1</sup> All federally funded research that involves human subjects, as well as clinical trials of new drugs and medical devices (regardless of the source of funding), are governed by a set of federal regulations called the Common Rule (45 CFR 46, Subpart A). Under the Common Rule, research proposals must be approved by an IRB, which decides whether or not to require informed consent based on the level of risk to the research subjects.

information, including the right to authorize disclosure or to request access to the information. However, if a minor is authorized by state law to consent to treatment and has consented to care (with or without the consent of a parent), the rule gives the minor the rights associated with that information. Whether or not a parent has access to the information is also largely governed by state law. The rule allows covered entities to disclose a minor's information to a parent if such disclosure is permitted or required by state law. Similarly, disclosure to a parent is prohibited where prohibited by state law.

Are There Limits on the Amount of Information Disclosed? The rule requires that whenever a covered entity uses or discloses health information, or requests such information from another covered entity, it must make a reasonable effort to limit the information to the minimum amount necessary to accomplish the intended purpose of the use or disclosure. The minimum necessary standard does not apply to: treatment-related disclosures; disclosures made to patients upon their request; disclosures made to the Secretary to enforce compliance; any uses or disclosures for which the covered entity has received an authorization; and uses or disclosures that are required by law.

What about Incidental Disclosures? Incidental uses and disclosures of health information that occur as a result of a use or disclosure that is otherwise permitted by the privacy regulation are not considered violations of the rule, provided that the covered entity has met the reasonable safeguards and minimum necessary standards. Examples of incidental uses and disclosures include patient sign-in sheets, bedside charts, and confidential conversations that are inadvertently overheard by others.

Are Covered Entities Required to Explain their Privacy Practices to Patients? As noted earlier, health plans and health care providers must provide patients with a written notice of their privacy practices. Plans are required to give notice at enrollment. Providers that have a direct treatment relationship with the patient are required to give notice at the date of first service delivery and, except in emergency situations, make a good faith effort to obtain a written acknowledgment from the patient of receipt of the notice. The notice must include a description of the patient's rights, the legal duties of the covered entity, and a description of the types of uses and disclosures of information that are permitted, including those that do not require an authorization.

Does the Rule Restrict Employers' Access to Health Information? The rule permits a group health plan to disclose individually identifiable health information to an employer that sponsors the plan, provided the information is used only for plan administration purposes. In order for a group health plan to disclose health information to a plan sponsor, the plan documents must be amended so that they limit the uses and disclosures of information by the sponsor to those consistent with the privacy rule. In addition, an employer must certify to a group health plan that it will not use the information for employment-related actions (e.g., hiring and promotion decisions). The employer must agree to establish adequate firewalls, so that only those employees that need health information to perform functions on behalf of the group health plan have access to such information.

**Can Medical Information be Used for Marketing?** A covered entity may not disclose health information to a third party (e.g., pharmaceutical company), in exchange for direct or indirect remuneration, for the marketing activities of the third party without first obtaining a patient's authorization. Similarly, a covered entity may not use or

disclose health information for its own marketing activities without authorization. However, communications made by a covered entity (or its business associate) to encourage a patient to purchase or use a *health care-related product or service* are not defined as marketing under the rule and, therefore, do not require the patient's authorization, even if the covered entity is paid. Such communications include prescription refill reminders and information about alternative treatments, as well as more controversial activities paid for by third parties (e.g., communications by pharmacies, paid for by a drug manufacturer, that recommend patients switch their medication to the company's product).

What Must Covered Entities do to Ensure Compliance? Covered entities must have reasonable administrative, technical, and physical safeguards in place, commensurate with the size and scope of their business, to protect the privacy of patient information. These include designating a privacy official, training employees, and developing a system of sanctions for employees who violate the entity's policies. Covered entities are not directly liable for the actions of their business associates. They may be held liable if they know of a business associate's pattern of activity or practice in violation of the contract and they fail to take reasonable steps to correct the problem and, if such steps are unsuccessful, terminate the contract or report the problem to HHS.

Does the Rule Preempt State Health Privacy Laws? As mandated by HIPAA, the rule does not preempt, or override, state laws that are more protective of patient privacy. Although most states do not have comprehensive health privacy laws, many states have detailed, stringent standards governing the use and disclosure of health information related to certain medical conditions, such as mental illness, genetic testing, and communicable diseases (e.g., HIV/AIDS). These stronger privacy protections will remain in force. The rule only preempts state laws that are in conflict with its requirements and that provide less stringent privacy protections. Therefore, it serves as a federal "floor" of minimum privacy protections.

**How Will the Rule be Enforced?** HIPAA did not grant individuals the right to sue for violations of their health information privacy. Instead, any person who believes a covered entity is not complying with the privacy rule may file a complaint with HHS's Office of Civil Rights (OCR), which is responsible for implementing and enforcing the rule. HHS officials have said that they intend to work with covered entities to encourage voluntary compliance, and that enforcement of the rule will be reactive and complaint-driven. Under HIPAA, OCR has the authority to impose civil monetary penalties against covered entities that fail to comply with the regulation, and criminal penalties for certain wrongful disclosures of personal health information. The civil fines are \$100 per incident, capped at \$25,000 per year for each provision that is violated. The criminal penalties include fines of up to \$250,000 and up to 10 years in prison for disclosing or obtaining health information with the intent to sell, transfer or use it for commercial advantage, personal gain, or malicious harm.

Where Can I Obtain More Information? General information on all the HIPAA standards can be found at [http://aspe.os.dhhs.gov/admnsimp]. Answers to frequently asked questions and other details on complying with the privacy rule may be found at [http://www.hhs.gov/ocr/hipaa]. Additional reports on the privacy rule are available on the CRS home page at [http://www.crs.gov].
