RL32696

Summary

The Office for Grants and Training, within the Department of Homeland Security, is responsible for directing and supervising federal terrorism preparedness grants for states and localities. Prior to FY2005, the Office for Domestic Preparedness, now renamed the Office for Grants and Training, offered that assistance through six separate grant programs. Some state and local officials, however, criticized the fragmentation of homeland security assistance and recommended streamlining the grant process. Subsequently, the Office for Domestic Preparedness recommended and—pursuant to Section 872 of the Homeland Security Act (P.L. 107-296), which authorizes the Department of Homeland Security Secretary “to allocate, reallocate, and consolidate functions and organization units within the Department”—former Department of Homeland Security Secretary Tom Ridge approved consolidating the separate programs into a single Homeland Security Grant Program. Within the consolidated program, however, the six types of assistance continued to have their separate identities and funding allocations as “sub-grants.” As a whole, the Homeland Security Grant Program provided assistance for a wide range of eligible activities, among which are planning, training, equipment acquisition, and exercises. To fund the program, Congress appropriated approximately \$2.5 billion for FY2005, roughly \$600,000 less than for the programs in FY2004.

This CRS report, which will be updated, summarizes key provisions of the FY2005 program guidance, with special attention to differences from the FY2003 and FY2004 editions. Among those differences are the following:

- consolidation of previously separate grant programs;
- specific application requirements for the Homeland Security Grant Program sub-grants;
- provisions for citizen and private sector involvement;
- authorization of operational overtime costs associated with Homeland Security Advisory System threat levels;
- guidance for critical infrastructure protection and border security; and
- streamlined grant administration based on recommendations of the Department of Homeland Security Task Force on State and Local Homeland Security Funding.

This report also discusses issues regarding methods used to allocate federal homeland security assistance and authorized expenditures of homeland security assistance programs, and it analyzes options Congress might consider for resolving those issues. Tables included in the report present comparative data on federal homeland security assistance to states and localities.

Introduction

The Office for Domestic Preparedness (ODP), now within the Department of Homeland Security's (DHS) Office for Grants and Training (G&T), is responsible for directing and supervising federal terrorism preparedness grants for states and localities.¹ Prior to FY2005, ODP offered that assistance through six separate grant programs.² Some state and local officials, however, criticized the fragmentation of homeland security assistance and recommended streamlining the grant process.³ Subsequently, ODP recommended and—pursuant to Section 872 of the Homeland Security Act (P.L. 107-296), which authorizes the DHS Secretary “to allocate, reallocate, and consolidate functions and organization units within the Department”—former DHS Secretary Tom Ridge approved consolidating the separate programs into a single Homeland Security Grant Program (HSGP).⁴ Within the consolidated program, however, the six types of assistance continued to have their separate identities and funding allocations as “sub-grants.” As a whole, the HSGP provided assistance for a wide range of eligible activities, among which are planning, training, equipment acquisition, and exercises. To fund the program, Congress appropriated approximately \$2.5 billion for FY2005, roughly \$600,000 less than for the programs in FY2004.⁵

ODP administered the Homeland Security Grant Program through its annual *Homeland Security Grant Program: Program Guidelines and Application Kit*,⁶ which provided homeland security assistance information and instructions to states and localities for such matters as developing and implementing state and local homeland security strategies. The FY2005 program guidance was more fully developed and offers more specificity than in previous years.

This CRS report, which will be updated, summarizes key provisions of the FY2005 program guidance, with special attention to differences from the FY2003 and FY2004 editions. Among those differences are the following:

- consolidation of previously separate grant programs;
- specific application requirements for HSGP sub-grants;
- provisions for citizen and private sector involvement;
- authorization of operational overtime costs associated with Homeland Security Advisory System (HSAS) threat levels;

¹ P.L. 107-296, Sec. 430(c)(3), Homeland Security Act.

² These grant programs included the State Homeland Security Grant Program, Urban Area Security Initiative, Law Enforcement Terrorism Prevention Program, Citizen Corps Programs, Metropolitan Medical Response System, and Emergency Management Performance Grants.

³ See U.S. Congress, Senate Committee on Governmental Affairs, *Investing in Homeland Security: Streamlining and Enhancing Homeland Security Grant Programs*, 108th Cong., 1st sess., May 1, 2003, (Washington: GPO, 2003); and U.S. Congress, House Committee on Government Reform, Subcommittee on National Security, Emerging Threats, and International Relations, *Combating Terrorism: Assessing Federal Assistance to First Responders*, 108th Cong., 1st sess., Sept. 15, 2003 (Washington: GPO, 2003).

⁴ P.L. 107-296, Sec. 872, Homeland Security Act. ODP recommendations and the secretary's decision reflected the work of DHS's Task Force on State and Local Homeland Security Funding. See U.S. Department of Homeland Security, *Fiscal Year 2005 Homeland Security Grant Program: Program Guidelines and Application Kit* (Washington: Dec. 2004), p. 18.

⁵ P.L. 108-334 and P.L. 108-90, DHS appropriations for FY2005 and FY2004, respectively.

⁶ *Fiscal Year 2005 Homeland Security Grant Program: Program Guidelines and Application Kit*.

- guidance for critical infrastructure protection and border security; and
- streamlined grant administration based on recommendations of the DHS Task Force on State and Local Homeland Security Funding.

This report also discusses issues regarding methods used to allocate federal homeland security assistance and authorized expenditures of homeland security assistance programs, and it analyzes options Congress might consider for resolving those issues. Tables included in the report present comparative data on federal homeland security assistance to states and localities.

Homeland Security Grant Program Overview

The Department of Homeland Security (DHS) consolidated the previous grant programs administered by the Office for Domestic Preparedness (ODP) into the Homeland Security Grant Program (HSGP). It includes the following sub-grants:

- State Homeland Security Grant Program (SHSGP);
- Urban Area Security Initiative (UASI);
- Law Enforcement Terrorism Prevention Program (LETPP);
- Citizen Corps Program (CCP);
- Emergency Management Performance Grants (EMPG); and
- Metropolitan Medical Response System (MMRS).

Each sub-grant is described briefly below:

State Homeland Security Grant Program

SHSGP provides homeland security assistance funds directly to states and territories to prevent, respond to, and recover from terrorist attacks. Funding from this program is meant to address state homeland security planning, equipment acquisition, training, and exercise needs.⁷

Urban Area Security Initiative

UASI provides funding to address the planning, equipment, training, and exercise needs in urban areas identified by DHS. The program is designed to help the urban areas prevent, respond to, and recover from terrorist attacks. Additionally, in the FY2005 DHS appropriations (P.L. 108-334), Congress authorized that funds from this program be provided to nonprofit organizations located within the identified urban areas.⁸

⁷ *Fiscal Year 2005 Homeland Security Grant Program: Program Guidelines and Application Kit*, p. 19.

⁸ *Ibid.*

Law Enforcement Terrorism Prevention Program

LETPP assists law enforcement agencies in conducting terrorism prevention activities. The activities include information sharing, target hardening, threat recognition and mapping, counter-terrorism and security planning, interoperable communications, and terrorist interdiction.⁹

Citizen Corps Program

CCP, originally administered by the Federal Emergency Management Agency (FEMA), provides funding for volunteers participating in community security through personal preparedness, training, and community service. This program supports the state's local Citizen Corps Councils which encourage citizens to prevent, prepare for, and respond to all hazards.¹⁰

Emergency Management Performance Grants

EMPGs, originally administered by FEMA, support comprehensive emergency management at the state and local levels. The program assists in mitigation, preparedness, response, and recovery from all hazards. Funds provided from this program may also be used to support state and local activities to manage the consequences of terrorist attacks.¹¹

Metropolitan Medical Response System

MMRS was originally administered by the Department of Health and Human Services (HHS), but was transferred to FEMA (within the Emergency Preparedness and Response directorate of DHS) in March 2003.¹² The program helps the 124 metropolitan medical systems identified by DHS to enhance and sustain their integrated and systematic preparedness actions to respond to mass casualty events. The mass casualty events can be the result of incidents ranging from chemical, biological, radiological, nuclear, and explosive attacks to epidemic outbreaks, natural disasters, and large-scale hazardous materials events.¹³

Program Guidance

Funding Distribution Methods

In the conference report (H.Rept. 108-774) accompanying the FY2005 DHS appropriations (P.L. 108-334), Congress directed DHS to allocate FY2005 funding for SHSGP, LETPP, EMPG, and CCP in the same manner as the FY2004 allocations. These allocations were based on the formula of 0.75% of total appropriations guaranteed to each state, and 0.25% of total appropriations guaranteed to each U.S. territory.¹⁴ In the absence of statutes or congressional guidance, DHS, in

¹³ *Fiscal Year 2005 Homeland Security Grant Program: Program Guidelines and Application Kit*, p. 20.

¹⁴ P.L. 107-56, Sec. 1014, USA PATRIOT Act.

FY2004, allocated the remaining appropriations in direct proportion to the ratio of the state's population to the total national population.¹⁵

UASI discretionary allocations were distributed using credible threat, presence of critical infrastructure, vulnerability, population, population density, law enforcement investigative and enforcement activity, and the existence of formal mutual aid agreements as funding factors.¹⁶ MMRS allocations guaranteed all 124 MMRS jurisdictions \$227,592 in FY2005 for a total appropriation of \$28.2 million, which is \$21.8 million less than appropriated in FY2004.¹⁷

HSGP Application and Matching Requirements

ODP required every state and territory to submit its application for HSGP sub-grants (including the State Homeland Security Grant Program, Law Enforcement Terrorism Prevention Program, and Citizen Corps Programs) by January 16, 2005. ODP stated it will respond to each completed application no later than 15 days after receipt. With each application, the state must provide a program narrative that describes current management capabilities to develop, implement, and manage the HSGP sub-grants. This narrative also included such specifics as an overview of the process by which the state determines funding allocations to localities, and state efforts to achieve National Incident Management System (NIMS) standards.¹⁸ There was no matching requirement for these sub-grants.

Each application delineated the allocation of HSGP funds and state resources in the following homeland security activities: planning; training; exercises; and management and administration. Each state provided an explanation of challenges and impediments that complicate the administration and management of the homeland security assistance programs.¹⁹

EMPG Applications and Matching Requirements

For EMPG allocations, applicants provided a narrative similar to the HSGP management narrative. Additionally, states provided a list of major emergency management initiatives and a brief overview of each initiative. EMPG was the only HSGP sub-grant that had a matching requirement of a 50% federal share and 50% state cost-share cash or in-kind match. American Samoa, Guam, the U.S. Virgin Islands, and the Commonwealth of the Northern Mariana Islands did not have a matching requirement for their EMPG allocations.²⁰

UASI Applications and Matching Requirements

The application process for UASI recipients has not changed from FY2004 program guidance. This guidance, however, provided for newly identified UASI urban areas. This guidance required newly identified urban areas to provide ODP with points of contact, a definition of the urban area,

¹⁹ *Ibid.*, p. 13.

²⁰ *Ibid.*, p. 12.

and the establishment of an Urban Area Working Group (UAWG).²¹ There was no matching requirement for UASI grants.

Pass-through Requirements

Each state obligated not less than 80% of the State Homeland Security Grant Program, Urban Area Security Initiative, Law Enforcement Terrorism Prevention Program, and Metropolitan Medical Response System to localities within 60 days of the grant award date. Additionally, any UASI funds retained by the state had to be used to directly support the identified urban area. The state was encouraged to pass-through 100% of MMRS funding to the identified metropolitan medical system. Any funds retained by the state, however, had to be documented in a written agreement between the state MMRS grant administering agency and the chair of the identified MMRS recipient.

There was no minimum pass-through requirement for CCP. States, however, were expected to work with local Citizen Corps Councils and to expend the funds to support Citizen Corps Council education, and training. States were required to pass through 100% of EMPG funding to designated state-level emergency management agencies.²²

State and Urban Area Homeland Security Strategies

DHS required states and urban areas to develop and use their State Homeland Security Strategies (SHSS) and Urban Area Homeland Security Strategies (UAHSS) as an approved guide for all security and preparedness activities funded through HSGP allocations. ODP certified and approved all SHSS and UAHSS. States were also encouraged to supplement federal homeland security assistance funding with state resources.²³

Citizen and Private Sector Involvement

States were required to coordinate SHSGP and UASI citizen awareness and participation activities with the state agencies administering CCP. In addition, states were encouraged to collaborate with the private sector to leverage private sector homeland security initiatives, resources, and capabilities. DHS considers private sector involvement crucial, given most of the nation's critical infrastructure is privately owned and operated.²⁴

Operational Overtime Costs

States and localities were authorized to use up to 25% of their LETPP allocation to support operational overtime costs incurred during an HSAS "high-orange" threat level that is associated with critical infrastructure security. Urban areas were authorized to use up to 25% of their UASI allocations to support operational overtime costs for increased critical infrastructure security. Of this amount, only 10% could be used for overtime costs associated with an HSAS "elevated-

²¹ Ibid., p. 17.

²² Ibid., p. 21.

²³ Ibid.

²⁴ Ibid., pp. 23-24.

yellow” or “high-orange” threat level. The remaining 15% of UASI allocations could be used only to support overtime costs incurred during an HSAS “high-orange” threat level.²⁵

Critical Infrastructure Protection

DHS directed states and local governments to consider critical infrastructure as any system or asset that if attacked would result in catastrophic loss of life and cause catastrophic economic loss. States and localities were required to consider specific facilities as critical infrastructure. This included such facilities as: venues for large public celebrations and events; water systems; chemical facilities; power generations systems; rail and highway bridges; mass transit subway systems; and telecommunications and cyber facilities.²⁶

Border Security

The security of the nation’s borders has become an important aspect of homeland security since the September 11, 2001, terrorist attacks. The importance of border security has resulted in DHS authorizing a portion of HSGP funding to be used for securing the U.S. borders. States and localities were authorized to use LETPP funding to provide enhanced law enforcement operations for increased border security during an HSAS “high-orange” threat level. UASI funding could be used for enhancing border security during an HSAS “elevated-yellow” or “high-orange” threat level. Increased patrol presence at the border and additional traffic control points were some of the enhanced law enforcement operations authorized by DHS for border security.²⁷

Unauthorized Homeland Security Activities

DHS did not allow states or localities to use HSGP funding for the following activities: construction and renovation of a building (unless for enhancing the security of the facility), and hiring of personnel.²⁸ The hiring of personnel is an issue that many state and local officials have stated is a critical homeland security need. Former DHS Secretary Ridge, however, stated before the Senate Committee on Governmental Affairs that it was not the role of the federal government to pay the salaries of state and local employees.²⁹

In addition to guidance on applications, homeland security strategies, citizen and private sector involvement, operational overtime costs, critical infrastructure protection, and border security, DHS provided information on homeland security equipment, training, and exercises in the HSGP program guidance. This information, however, was similar to that provided to states and localities in FY2003 and FY2004.³⁰

Task Force on State and Local Homeland Security Funding Recommendations

In March 2004, former DHS Secretary Tom Ridge established the Task Force on State and Local Homeland Security Funding. This task force comprised governors, mayors, local government officials, and tribal officials. It was tasked to examine the distribution of homeland security funds to states and localities, and develop specific and objective recommendations to expedite the process by which DHS allocates homeland security assistance funding. The task force focused on three areas: delay of funding; best practices; and recommendations to eliminate delay in funding.³¹ In June 2004, the task force published its report, *A Report from the Task Force on State and Local Funding*, which provided recommendations to streamline federal homeland security grant applications and distribution processes.³²

The following table provides information on task force recommendations from its report, and the corresponding FY2005 HSGP program guidance:

Table I. Task Force Recommendations and FY2005 HSGP Program Guidance

Task Force Recommendation	FY2005 HSGP Guidance
Allow states and localities to draw down grant funds from the U.S. Treasury up to 120 days in advance of expenditure, as opposed to the 3-5 days currently allowed.	States and localities are authorized to draw down grant funding 120 days prior to expenditure.
Expand the approved uses of SHSGP funds to allow states and local governments better to address short term homeland security issues.	UASI grant recipients are authorized to support operational overtime costs incurred at an HSAS “elevated-yellow” or “high-orange” threat level for critical infrastructure security.
Enhance training and technical assistance available to states and localities involved in the management and distribution of homeland security assistance grants.	DHS provides grant management technical assistance to states and localities to assist in the distribution of HSGP funding.
Establish an Office of the Comptroller within DHS to assume complete financial responsibility for homeland security assistance grants.	DHS will establish the Office of Grant operations, within SLGCP, to provide administrative and financial grants management support.

Issues

Funding Distribution Methods

On July 22, 2004, the National Commission on Terrorist Attacks Upon the United States (9/11 Commission) issued *The 9/11 Commission Report* recommending, among other things, that federal homeland security assistance be distributed to state and local governments based on risk

³¹ Ibid., p. 18.

³² U.S. Department of Homeland Security, Task Force on State and Local Funding, *A Report from the Task Force on State and Local Funding*, (Washington: June 2004).

and vulnerability. The 9/11 Commission recommended that risk and vulnerability assessments consider population, population density, vulnerability, and the presence of critical infrastructure within each state.³³

Other critics of the FY2005 funding distribution method, including some Members of Congress, stated that the funding distribution methods used to provide federal homeland security assistance to states and localities were inadequate and unfair. Additionally, these critics asserted that the present formula did not consider the threat of terrorist attack or vulnerability.³⁴ Other observers noted this allegedly unfair distribution of funds.³⁵

Variation in the distribution of funds under the FY2005 State Homeland Security Grant Program was seen, for example, in a comparison of Wyoming and New York. Wyoming's FY2005 State Homeland Security Grant Program allocation of \$9 million.³⁶ Based on Wyoming's 2002 estimated census population of 498,703, the state was allocated \$18.00 per capita. In contrast, New York (arguably a more likely target for terrorist attacks) was allocated \$49.4 million from the State Homeland Security Grant Program in FY2005.³⁷ Based on New York's 2002 estimated census population of 19,157,532, New York was allocated \$2.57 per capita.

The 9/11 Commission Recommendation

The 9/11 Commission reported that prior to the September 11, 2001 terrorist attacks, no federal department had as its first priority defending the United States from domestic terrorist attack. This changed with the creation of DHS in 2002.³⁸ According to the report, no challenge was more difficult for federal government decision makers "than to set priorities, making hard choices in allocating limited resources."³⁹

The 9/11 Commission recommended that state and local homeland security assistance should be allocated strictly on risk and vulnerability assessments. In 2004, New York City and Washington, D.C., would likely be at or near the top of any threat assessment list. The commission indicated that it understands the argument for state and local baseline security. It stated unequivocally, however, that federal homeland security assistance should not remain a program "for general revenue sharing." It suggested that federal assistance should supplement state and local resources based on risks and vulnerabilities that merit additional support.⁴⁰

³⁷ *Ibid.*

³⁸ P.L. 107-296, Sec. 102(c) states that the DHS Secretary is responsible for administering grant programs for state and local homeland security.

³⁹ *The 9/11 Commission Report*, p. 395.

⁴⁰ *Ibid.*, p. 396.

Some would argue that the 9/11 Commission recommendation to distribute federal homeland security assistance funding based on threat and vulnerability is not viable at this time. Critics pointed to the lack of DHS's ability to determine accurately the nation's threats, risks, and vulnerabilities. An example of this would be the decision by DHS to raise the Homeland Security Advisory System (HSAS) threat level from "elevated-yellow" to "high-orange" on August 1, 2004. This action, based, in part, on terrorist threat intelligence that was reportedly pre-September 11, 2001, led to the following comment by a senior law enforcement official: "There is nothing right now that we're hearing that is new. Why did we go to this level? I still don't know that."⁴¹ Another example would be Attorney General John Ashcroft's June 14, 2004 announcement that a secret cell of Al Qaeda had plotted to attack an undisclosed Columbus, Ohio, shopping mall.⁴²

Some arguing against the proposed risk and vulnerability criteria pointed out that when security increases in one location, there was a possibility that terrorists search for other, softer, targets.⁴³ Additionally, in a letter to former DHS Secretary Ridge, the Democrats on the House Select Committee on Homeland Security, now the House Committee on Homeland Security, expressed concern that inconsistent methodology for extracting data about key critical infrastructure assets around the nation resulted in incomplete and inadequate vulnerability assessments.⁴⁴

Those responding to such critics noted that risk and vulnerability assessments based on credible and corroborated intelligence were arguably the logical method of allocating limited homeland security assistance funding. The recommendation, however, was based on the 9/11 Commission's recognition of the reality of limited funding for protecting the nation, and that risk and vulnerability assessments, based on available intelligence, were two main criteria in determining the appropriate level of homeland security.

It may be argued, however, that the 9/11 Commission's recommendation did not provide sufficient guidance for distributing homeland security assistance based on risk and vulnerability assessments. The recommendation, however, identified the political issues associated with homeland security funding distribution. Additionally, the recommendation proposed such criteria as population, population density, vulnerability, and the presence of critical infrastructure. The 9/11 Commission did not define risk and vulnerability factors, nor did it define critical infrastructure. In the absence of definitions for these criteria, each state could have theoretically argued for a significant portion of homeland security funding based on its *own* definition of risk, vulnerability, and critical infrastructure.

If Congress legislates the 9/11 Commission recommendation to distribute homeland security assistance funding based on risk and vulnerability assessments, and critical infrastructure, it may need to give guidance to DHS on what risk and vulnerability criteria, and critical infrastructure to consider. With this guidance, Congress could, through statutory or conference report language, direct DHS to weigh some risk and vulnerability criteria, and critical infrastructure more heavily than others. Due to the diversity of the U.S. economy, the large and interconnected nature of private and government operated critical infrastructure sectors, DHS may not be able to conduct in-depth and complete risk and vulnerability assessments in a short amount of time. DHS would

need to establish a national vulnerability assessment based on state vulnerability assessments. Then DHS would need to identify the nation's critical infrastructure and establish priorities for its protection.

Intelligence Reform Bills

In the 108th Congress, two bills passed the House and Senate that included provisions to change the current homeland security assistance funding formulas : S. 2845, the National Intelligence Reform Act of 2004; and H.R. 10, the 9/11 Recommendations Implementation Act. Both bills proposed to include threat and risk criteria in the distribution of a portion of the funds. Neither H.R. 10 nor S. 2845, however, proposed to distribute state and local homeland security funding strictly according to threat and risk; both bills proposed a guaranteed minimum amount to each state.⁴⁵ These provisions were removed from the bill as finally enacted.⁴⁶

Authorized Expenditures for Homeland Security Assistance Funding

Witnesses before congressional committees have testified that there is a need at the state and local level to increase the number of homeland security personnel.⁴⁷ These personnel include firefighters, law enforcement personnel, emergency managers, and emergency medical personnel. Additionally, these witnesses have testified about the cost in overtime during an HSAS “high-orange” threat level.

One could argue, that the most important homeland security asset a state and locality possess is personnel. Without an adequate number of first responders and other homeland security personnel, all other federal homeland security assistance is arguably marginal at securing states and localities from terrorist attacks.

Presently, EMPG is the only HSGP program that allows states and localities to use grant funding to pay the salaries of emergency managers. LETPP and UASI authorize a portion of state and locality funding to be used for overtime costs during HSAS “elevated-yellow” and “high-orange” threat levels.

Options

In addition to EMPG providing funding for personnel, and the LETPP and UASI overtime cost funding, there are other options for providing assistance to states and localities with a homeland security personnel need.

Funding Personnel Costs with SHSGP Grants. If Congress were to decide that funding state and local personnel costs was an important aspect of homeland security, it could direct ODP to

⁴⁵ For further information and a comparison of these bills, see CRS Report (archived) RL32634, *First Responder Grant Formulas: A Comparison of Formula Provisions in S. 2845 and H.R. 10, 108th Congress*, by (name redacted), available upon request from the author.

⁴⁶ S. 2845, passed by Congress and sent to the President for his signature on Dec. 8, 2004.

⁴⁷ U.S. Congress, Senate Committee on Governmental Affairs, *Investing in Homeland Security: Streamlining and Enhancing Homeland Security Grant Programs*; and U.S. Congress, House Committee on Government Reform, Subcommittee on National Security, Emerging Threats, and International Relations, *Combating Terrorism: Assessing Federal Assistance to First Responders*.

authorize states and localities to use SHSGP funds for personnel costs. Congress could also appropriate a specific percentage within SHSGP funding for personnel costs. This option, however, would provide funding that, some argue, is a responsibility of state and local governments. DHS Secretary Ridge, in testimony before the Senate Governmental Affairs Committee on May 1, 2003, stated that it was not the responsibility of the federal government to pay the salaries of state and local employees.⁴⁸

Funding Overtime Costs Associated with an HSAS “High-Orange” Threat Level. Should Congress determine that DHS does not provide enough assistance to states and localities during an HSAS “high-orange” threat level, it could direct ODP, through statutory or conference report language, to authorize states and localities to use SHSGP funding for overtime costs during this threat level. If Congress chose not to authorize the use of SHSGP funding for overtime costs, it could direct ODP to increase the percentage of LETPP and UASI funding it authorizes states and localities to use for overtime costs. Some could argue that the federal government, specifically DHS, determines when there is a need to raise the HSAS threat level; thus the federal government should assist states and localities when they raise their homeland security due to this threat level. This option, however, could be compared to the funding of homeland security personnel issue, and the discussion of the federal government’s (non) role in funding personnel at the state and local levels could be argued as valid for overtime costs.

⁴⁸ U.S. Congress, Senate Committee on Governmental Affairs, *Investing in Homeland Security: Streamlining and Enhancing Homeland Security Grant Programs*.

Table 2. FY2005 HSGP State Allocations

(In millions of dollars, except per capita amounts)

State	SHSGP	UASI	LETPP	CCP	EMPG	MMRS	Total	Per Capita
Alabama	\$17.7	—	\$6.4	\$0.2	\$2.9	\$0.9	\$28.1	\$6.24

Table 6. FY2005 MMRS Allocation Recipients
 (Each metropolitan medical system is allocated \$227,592)

State	Metropolitan Medical System
Alabama	Birmingham, Huntsville, Mobile, and Montgomery
Alaska	Anchorage and Southeast Alaska
Arizona	Glendale, Mesa, Phoenix, and Tucson
Arkansas	Little Rock
California	Los Angeles, San Francisco, San Diego, San Jose, Long Beach, Oakland, Sacramento, Fresno, Santa Ana, Anaheim, Riverside, Glendale, Huntington Beach, Stockton, Bakersfield, Fremont, Modesto, and San Bernardino
Colorado	Aurora, Colorado Springs, and Denver
Connecticut	Hartford
Florida	Miami, Jacksonville, Tampa, St. Petersburg, Hialeah, Ft. Lauderdale, and Orlando
Georgia	Atlanta and Columbus
Hawaii	Honolulu
Illinois	Chicago
Indiana	Ft. Wayne and Indianapolis
Iowa	Des Moines
Kansas	Kansas City and Wichita
Kentucky	Lexington and Louisville
Louisiana	Baton Rouge, Jefferson Parish, New Orleans, and Shreveport
Maryland	Baltimore
Massachusetts	Boston, Springfield, Worcester
Michigan	Detroit, Grand Rapids, and Warran
Minnesota	Minneapolis and St. Paul
Mississippi	Jackson
Missouri	Kansas City and St. Louis
Nebraska	Lincoln and Omaha
Nevada	Las Vegas
New Hampshire	Northern New England (also serves Maine and Vermont)
New Jersey	Jersey City and Newark
New York	Buffalo, New York City, Rochester, Syracuse, and Yonkers
North Carolina	Charlotte, Columbia, Greensboro, and Raleigh
Ohio	Akron, Cincinnati, Cleveland, Columbus, Dayton, and Toledo
Oklahoma	Oklahoma City and Tulsa
Oregon	Portland
Pennsylvania	Allegheny County and Philadelphia
Rhode Island	Providence

State	Metropolitan Medical System
South Carolina	Columbia
Tennessee	Chattanooga, Knoxville, Memphis, and Nashville
Texas	Amarillo, Arlington, Austin, Corpus Christi, Dallas, El Paso, Fort Worth, Garland, Houston, Irving, Lubbock, San Antonio, and Southern Rio Grande
Utah	Salt Lake City
Virginia	Arlington County, Chesapeake, Newport News, Norfolk, Richmond, and Virginia Beach
Washington	Seattle, Spokane, and Tacoma
Wisconsin	Madison and Milwaukee

EveryCRSReport.com

The Congressional Research Service (CRS) is a federal legislative branch agency, housed inside the Library of Congress, charged with providing the United States Congress non-partisan advice on issues that may come before Congress.

EveryCRSReport.com republishes CRS reports that are available to all Congressional staff. The reports are not classified, and Members of Congress routinely make individual reports available to the public.

Prior to our republication, we redacted names, phone numbers and email addresses of analysts who produced the reports. We also added this page to the report. We have not intentionally made any other changes to any report published on EveryCRSReport.com.

CRS reports, as a work of the United States government, are not subject to copyright protection in the United States. Any CRS report may be reproduced and distributed in its entirety without permission from CRS. However, as a CRS report may include copyrighted images or material from a third party, you may need to obtain permission of the copyright holder if you wish to copy or otherwise use copyrighted material.

Information in a CRS report should not be relied upon for purposes other than public understanding of information that has been provided by CRS to members of Congress in connection with CRS' institutional role.

EveryCRSReport.com is not a government website and is not affiliated with CRS. We do not claim copyright on any CRS report we have republished.
