Committees of Congress

Foreign Science and Engineering Presence in U.S. Institutions and the Labor Force

Summary

The increased presence of foreign students in graduate science and engineering programs and in the scientific workforce has been and continues to be of concern to some in the scientific community. Enrollment of U.S. citizens in graduate science and engineering programs has not kept pace with that of foreign students in those programs. In addition to the number of foreign students in graduate science and engineering programs, a significant number of university faculty in the scientific disciplines are foreign, and foreign doctorates are employed in large numbers by industry.

Few will dispute that U.S. universities and industry have chosen foreign talent to fill many positions. Foreign scientists and engineers serve the needs of industry at the doctorate level and also have been found to serve in major roles at the masters level. However, there are charges that U.S. workers are adversely affected by the entry of foreign scientists and engineers, who reportedly accept lower wages than U.S. citizens would accept in order to enter or remain in the United States.

NSF data reveal that in 2005, the foreign student population earned approximately 34.7% of the doctorate degrees in the sciences and approximately 63.1% of the doctorate degrees in engineering. In 2005, foreign students on temporary resident visas earned 30.8% of the doctorates in the sciences, and 58.6% of the doctorates in engineering. The participation rates in 2004 were 28.5% and 57.3%, respectively. In 2005, permanent resident status students earned 3.8% of the doctorates in the sciences and 4.5% of the doctorates in engineering, slightly above the 2004 levels of 3.7% and 4.2%, respectively.

Many in the scientific community maintain that in order to compete with countries that are rapidly expanding their scientific and technological capabilities, the country needs to bring to the United States those whose skills will benefit society and will enable us to compete in the new-technology based global economy. The academic community is concerned that the more stringent visa requirements for foreign students may have a continued impact on enrollments in colleges and universities. There are those who believe that the underlying problem of foreign students in graduate science and engineering programs is not necessarily that there are too many foreign-born students, but that there are not enough native-born students pursuing scientific and technical disciplines.

Comprehensive immigration reform legislation is currently under consideration in the 110th Congress. S.Amdt. 1150 to S. 1348 would, among other things, ease the restrictions on foreign students in scientific and technical disciplines. The bill would increase the annual quota for highly educated temporary workers on H-1B visas from 65,000 to 115,000. The bill would expand the types of individuals who would no longer be subjected to the annual limits on legal immigrants. This report will be updated periodically.

Foreign Science and Engineering Presence in U.S. Institutions and the Labor Force

The increased presence of foreign students in graduate science and engineering programs and in the scientific workforce has been and continues to be of concern to some in the scientific community.¹ Enrollment of U.S. citizens in graduate science and engineering programs has not kept pace with that of foreign students in those programs. In addition to the number of foreign students in graduate science and engineering programs, a significant number of university faculty in the scientific disciplines are foreign, and foreign doctorates are employed in large numbers by industry.

Those in the scientific community, arguing for ceilings on admissions for immigrants, maintain that foreign students use U.S. graduate education programs as stepping stones to immigration through sponsorships for permanent residence.² Approximately 56% of foreign doctorate degree earners on temporary visas remain in the United States, with many eventually becoming citizens.³ Data on adjustments from temporary visas to permanent status increased by 68% from 347,416 in 2003 to 583,921 in 2004.⁴ It is estimated that by 2010, more than 50% of all employment-based preference workers would adjust their temporary status to permanent status.

¹This report excludes the discussion of foreign students entering the medical profession. For a general discussion of foreign students in the United States in all disciplines, see for example, CRS Report RL31146, *Foreign Students in the United States: Policies and Legislation*, by Chad C. Haddel.

²An employer may sponsor a foreign scientist or engineer for permanent residence, if they meet terms established by the Immigration and Nationality Act.

³Foreign students planning to remain in the United States following graduation vary by field and discipline as well as by country. For all science and engineering fields, the stay rate is 56%; for physical sciences, 64%; life sciences, 63%; mathematics, 57%; computer sciences, 63%; and agricultural sciences, 38%. Stay rates are not static, and various estimates appear in the literature. Differences are observed over a period of time in the main country of origin for foreign scientists and engineers. (It is estimated that Chinese and Indian students who choose to remain in the United States following their studies range from 66% to 92% and 77% to 88% respectively). The stay rates of foreign students have an impact on both the U.S. economy and the supply of scientific personnel in the United States and on the economies of the home countries of the foreign students. National Science Foundation, *Science and Engineering Indicators 2004, Volume I*, NSB04-01, Arlington, VA, January 15, 2004, pp. 3-38 - 3-39.

⁴ Department of Homeland Security, Office of Immigration Statistics Management Directorate, *U.S. Legal Permanent Residents: 2004*, Nancy F. Rytina, June 2005, p. 3.

Few will dispute that U.S. universities and industry have chosen foreign talent to fill many positions.⁵ Foreign scientists and engineers serve the needs of industry at the doctorate level and also have been found to serve in major roles at the masters level.⁶ Not surprisingly, there are charges that U.S. workers are adversely affected by the entry of foreign scientists and engineers, who reportedly accept lower wages than U.S. citizens would accept in order to enter or remain in the United States.⁷ These arguments occur in the context of a debate on projections and potential imbalances in certain scientific and technical disciplines.⁸ The U.S. Bureau of Labor Statistics reports that between the years 2000 and 2010, employment in science and engineering fields will increase at a faster rate than all other occupations. The growth rate will result, primarily, from growth in mathematics and computer-related occupations.⁹

Much attention in the scientific community has focused on the H-1B temporary admissions program.¹⁰ A report of the National Science Foundation (NSF) during the

⁵ It is estimated that in colleges and universities, foreign-born doctorate degree holders account for approximately 33% of the full-time faculty in computer sciences, 26% in engineering, 33% in mathematics, and 22% in the physical sciences. At the postdoctoral level, the participation of foreign doctorate holders is 56% in engineering, 50% in mathematics, and 42% in physical sciences. Data show that since 1990, approximately 50% of the U.S. Nobel laureates in the scientific and technical disciplines were foreign-born. *Science and Engineering Indicators 2004*, Volume 2, Appendix Table 5-25.

¹⁰The H-1B visa category was established by the Immigration Act of 1990. The Immigration Act and the American Competitiveness and Workforce Improvement Act of 1998 regulate H-1B policy and guide H-1B procedures. The H-1B temporary visa category allows the foreign professional to work in the United States in specialty occupations for a period up to six years (generally in three-year increments). Typically the specialty occupation includes positions such as scientists, engineers, teachers, computer programmers, medical doctors, and physical therapists. The application for H-1B status must be filed by an employer; an individual cannot obtain an H-1B visa on his or her own. Employers of H-1B workers are required to meet certain labor conditions, including paying comparable wages. The requirements are designed to ensure that U.S. workers are not negatively impacted by nonimmigrant workers. For expanded discussion of the H-1B visa see CRS Report RL30498, *Immigration: Legislative Issues on Nonimmigrant Professional Speciality (H-1B)* (continued...)

late 1980s claiming a nationwide shortage of scientists and engineers may have contributed to the decision by Congress to expand the skilled-labor preference system contained in the Immigration Act of 1990.¹¹ The 1990 legislation more than doubled employment-based immigration, including scientists and engineers entering under the H-1B visa category. The act raised the numerical limits or ceilings on permanent, employment-based admissions, from 54,000 to 140,000 annually.¹² In addition, the legislation ascribed high priority to the entry of selected skilled and professional workers, and simplified admissions procedures for foreign nationals seeking to temporarily work, study, or conduct business in the United States.

On October 17, 2000, the American Competitiveness in the Twenty-First Century Act of 2000 was signed into law (P.L. 106-313), significantly changing the H-1B program and the employment-based immigration program. The legislation raised the annual number of H-1B visas to 195,000 for FY2001, FY2002, and FY2003, and returned to 65,000 in FY2004. It excluded from the new ceiling all H-1B nonimmigrants who are employed by institutions of higher education and nonprofit or governmental research organizations. The law authorized additional H-1B visas for FY1999 to offset the visas inadvertently approved for the year that exceeded the cap.¹³ In addition, the law increased the fees employers paid for each petition for nonimmigrant status — from \$500 to \$1,000 per petition.¹⁴ A portion of the fees are made available to the NSF for the development of private-public partnerships in K-12 education, the expansion of computer science, engineering, and mathematics scholarships, and the establishment of demonstration programs or

Workers, by Ruth Ellen Wasem, and Usdansky, Margaret L. and Thomas J. Espenshade, *The H-1B Visa Debate in Historical Perspective: The Evolution of U.S. Policy Toward Foreign-Born Workers*, Working Paper No. 11, The Center for Comparative Immigration Studies, University of California-San Diego, May 10, 2000, 11pp.

¹¹The shortage of technical workers that was projected and used to justify the significant increase in employment-based immigration authorized by the 1990 Immigration Act never materialized. The projections were determined to be erroneous because of flawed data and faulty methodology. Mervis, Jeffrey, “Congress Presses Probe Into NSF Prediction of Scientist Shortage,” *The Scientist*, v. 5, October 28, 1991, pp. 1, 6-7.

¹²Immigration to the United States occurs in three ways: (1) legal, including family- and employment-based immigration; (2) humanitarian, which includes refugees and/or asylum seekers; and (3) illegal.

¹³ The then Immigration and Naturalization Service acknowledged that in the fall of 1999, problems with the computerized tracking system lead to the approval of between 21,888 and 23,385 more H-1B visas allowable for FY1999. See for example General Accounting Office, *H-1B Foreign Workers: Better Controls Needed to Help Employers and Protect Workers*, GAO/HEHS-00-157, Washington, DC, September 2000, pp. 28-29.

¹⁴ The law expanded the list of employers who are exempt from paying the fee. For expanded discussion of the H-1B specialty worker see General Accounting Office, *Grants from H-1B Visa Fees Meet Specific Workforce Needs, But At Varying Skill Levels*, GAO-02-881, Washington, DC, September 2002, 78 pp.

projects that provide technical skills training for U.S. workers, both employed and unemployed.¹⁵

Signed into law on December 8, 2004, P. L. 108-447, The Consolidated Appropriations Act, 2005, reauthorized H-1B funding.¹⁶ The fee employers pay for each petition was raised from \$1,000 to \$1,500 per petition. For employers with less than 25 full-time equivalent employees, the fee was set at \$750 per petition. Also, the legislation created an additional 20,000 H-1B visas for FY2005, for those who had earned a masters degree or higher from a U.S. institution of higher education.¹⁷

The scientific community has been divided over proposals to impose stricter immigration limits on people with scientific and technical skills. Attempts to settle upon the balance between the needs for a highly skilled scientific and technical workforce, and the need to protect and ensure job opportunities, salaries, and working conditions of U.S. scientific personnel, will continue to be debated. This paper addresses these issues.

Foreign Students in U.S. Institutions

The number of non-U.S. citizens enrolling in U.S. colleges and universities slowed following the September 11th terrorist attacks.¹⁸ The slowing of enrollments has been attributed to, among other things, the tightening of U.S. visa policies and increased global competition for graduates in the scientific and technical disciplines from countries such as China, India, and Canada.¹⁹ However, a 2006 report of the

¹⁵ In addition, the Department of Labor received fees for job training, scholarships, and grants. The fees had sunset on October 1, 2003.

¹⁶ Title IV, Subtitle B: H-1B Visa Reform.

¹⁷ The first 20,000 H-1B beneficiaries with an earned master's degree or higher from a U.S. institution are exempt from the annual congressional mandated H-1B visa cap of 65,000. In addition, the legislation modified the formula for allocating fees from the H-1B Nonimmigrant Petitioner Account. See U.S. Department of Homeland Security, U.S. Citizenship and Immigration Services, Press Release, "USCIS to Implement H-1B Visa Reform Act of 2004," December 9, 2004, 2pp. Citizenship and Immigration Services began taking applications for the 20,000 H-1B visa workers with advanced degrees on May 12, two months behind schedule. The USCIS stated that the delay in implementation of the expanded H-1B visa program resulted from a need for clarification and interpretation of the law. NOTE: The USCIS exceeded the 65,000 cap on H-1B visas by approving 10,000 more petitions for visas than were authorized by Congress.

¹⁹ See for example Mooney, Paul and Shailaja Neelakantan, "No Longer Dreaming of America," *The Chronicle of Higher Education*, v. 51, October 8, 2004, p. A41, Birchard, (continued...)

Institute of International Education reveals that for the academic year 2005-2006, the number of foreign-born students (in all disciplines) remained steady following a two-year decline.²⁰ In addition, new foreign student enrollment increased by approximately 8.3% from the previous academic year. The new enrollments are said to result from both recruitment efforts by U.S. institutions and recently improved visa processing for students. The international student enrollment changes are reflected differently by types of institutions, levels of study, and disciplines.

There are noticeable differences by world region of origin in the flow of foreign students to the United States. India's students were 13.5% of the population for academic year 2005-2006. The other countries of origin of foreign students falling within the top ten were China (11.1%), Republic of Korea (10.4%), Japan (6.9%), Canada (5.9%), Taiwan (4.9%), Mexico (2.5%), Turkey (2.1%), Germany (1.6%), and Thailand (1.6%). The top ten fields of study for all foreign students were: business and management (17.9%), engineering (15.7%), other (10.5%), physical and life sciences (8.9), social sciences (8.2%), mathematics and computer sciences (8.1%), optional practical training (7.4%), fine and applied arts (5.2%), health professions (4.8%), and undeclared (3.2%).²¹

Participation Rates in Science and Engineering

NSF data reveal that in 2005, the foreign student population earned approximately 34.7% of the doctorate degrees in the sciences and approximately 63.1% of the doctorate degrees in engineering.²² In 2005, foreign students on temporary resident visas²³ earned 30.8% of the doctorates in the sciences, and 58.6% of the doctorates in engineering.²⁴ (See Figure 1). The participation rates in 2004 were 28.5% and 57.3%, respectively. In 2005, permanent resident status²⁵ students earned 3.8% of the doctorates in the sciences and 4.5% of the doctorates in

²³ A temporary resident is a person who is not a citizen or national of the United States and who is in this country on a temporary basis and can not remain indefinitely. The terms nonresident alien or nonimmigrant are used interchangeably.

²⁴ *Science and Engineering Doctorate Awards:2005*, Table 3.

²⁵ A permanent resident ("green card holder") is a person who is not a citizen of the United States but who has been lawfully accorded the privilege of residing permanently in the United States. The terms resident alien or immigrant apply.

engineering, slightly above the 2004 levels of 3.7% and 4.2%, respectively. Trend data for science and engineering degrees for the years 1996-2005 reveal that of the non-U.S. citizen population, temporary resident status students consistently have earned the majority of the doctorate degrees. (See **Tables 1 and 2**).

Figure 1. Doctorate Degrees: U.S. and Non-U.S. Citizens, 2005

Source: *Science and Engineering Doctorate Awards: 2005*, Table 3.

Note: An additional 1,180 degrees in the sciences, and 366 degrees in engineering were awarded to individuals of unknown citizenship.

Disaggregated data for the subfields of science provide a detailed picture of degree recipients by U.S. citizenship and non-U.S. citizenship status. In 2005, foreign students (temporary and permanent resident status) were awarded 46.1% of the doctorates in the physical sciences, an increase from the 43.9% awarded in 2004. In mathematics, 55.1% of the doctorates were awarded to foreign students in 2005, an increase from the 54.2% awarded in 2004. For the computer sciences, 58.7% were awarded to foreign students, an increase above the 2004 level of 53.7%. The earth, atmospheric, and ocean sciences and the agricultural and biological sciences awarded 35.6% and 32.1% of the degrees respectively to foreign-born students in 2005, compared to the 2004 levels of 36.0% and 30.9%. In the social sciences and psychology, 24.6% of the doctorates were awarded to foreign students in 2005, a slight decrease from 22.0% awarded in 2004.²⁶

The NSF provides specific data on the country of origin of foreign-born science and engineering doctorate awards. Data for 2005 reveal that of the earned doctorate degree holders (non-U.S. citizens), 29.9% were from China, 9.6% were from India, 3.8% were from Taiwan, 3.2% from Canada, 3.5% from Africa, 3.0% from Turkey, 1.8% from Japan, 1.4% from Brazil, and 1.6% from Germany.²⁷ See Figure 2 for additional disaggregated data on doctorate degrees awarded to non-U.S. citizens by country of origin.

Figure 2. Non-U.S. Citizens Awarded Doctorates in Science and Engineering by Country or Citizenship, 2004

Source: *Science and Engineering Doctorate Awards: 2005*, Table 11.

Note: A total of 78 degrees were awarded to non-U.S. citizens from countries unknown.

Support of Foreign Students in Graduate School

Certain restrictions have been placed on foreign students with temporary resident student status who are enrolled in graduate programs in U.S. institutions. Foreign graduate students are required to be full-time students, and are prohibited, due to visa restrictions, from seeking employment.²⁸ While they are prohibited also from obtaining most fellowships, traineeships or federally guaranteed loans, they are able to be employed as research assistants or teaching assistants on federally funded research projects.²⁹

Foreign and U.S. science and engineering graduate students receive financial support from many resources — personal, university (primarily through teaching

²⁸ Restrictions are primarily because of their temporary status and related visa restrictions imposed by the Immigration and Nationality Act.

²⁹ Limited funds are available, however, to foreign students (J-visas for cultural exchange) within the Fulbright program.

assistantships, research assistantships/traineeships, fellowships/dissertation grants)³⁰, foreign government, employer, and other.³¹ Many foreign students receive support from their home country, though it is generally limited to the first year of study.³² For the continuing years, the university usually provides support mostly in the form of research assistantships or teaching assistantships. While temporary resident foreign students are ineligible for direct federal aid, the university support provided to them through research assistantships and teaching assistantships often results from federally funded research grants awarded to their home institution.³³

The 2006 report, *Doctorate Recipients from United States Universities: Summary Report 2005*, reveals that institutions of higher education provide a significant amount of support, primarily through teaching assistantships, research assistantships/traineeships, and fellowships/dissertation grants, to foreign students on temporary and permanent resident visas.³⁴ In all fields, a greater percentage of non-U.S. citizen doctoral recipients receive financial assistance from universities than do U.S. doctoral recipients.³⁵ (See Table 3 for primary sources of financial support). A disaggregation of the data by race/ethnicity reveal that 41.% of black doctoral students relieved on their own resources to finance their graduate studies, followed by Native Americans at 37.4%, whites, at 31.7%, Hispanics, at 32.7%, and Asians, at 17.2%.³⁶

³⁰ Private foundations, federal agencies, and state governments are usually the original sources of these funds.

³¹ A significant number of doctoral students receive support from more than one source or one mechanism. Multiple sources of support may occur in the same academic year.

³² A new educational bilateral exchange program entered into by President Bush and Saudi King Abdullah will provide full tuition support for approximately 15,000 Saudi students studying in U.S. institutions in the academic school year 2006-2007. "US Schools Compete for Thousands of Saudi Students," *International Herald Tribune*, September 9, 2006.

³³ The NSF reports that "Total Federal support of graduate students is underestimated since reporting on Federal sources includes only direct Federal support to a students and support to research assistants financed through the direct costs of Federal research grants. This omits students supported by departments through the indirect costs portion of research grants; such support would appear as institutional (non-Federal) support, since the university has discretion over how to use these funds." *Science and Engineering Indicators 2000*, Volume I, NSB00-1, Arlington, VA, January 13, 2000, pp. 6-29.

³⁴ *Doctorate Recipients from United States Universities: Summary Report 2005*, pp. 26-30.

³⁵ Primary mechanisms of support differ broadly by discipline and field of study. Admittedly, various graduate programs have different financial aid policies and mechanisms, with science and engineering programs offering more fellowships and traineeships than other disciplines.

³⁶ *Doctorate Recipients from United States Universities: Summary Report 2005*, p. 63.

Table 3. Primary Sources of Financial Support for Doctorate Recipients, 2005

Primary Source of Support		Total	U.S. Citizen	Permanent Visa	Temporary Visa
All Fields	N	38,531	24,900	1,488	11,987
- Teaching Assistantships	%	17.1	15.3	21.9	20.3
- Research Assistantships/Traineeships	%	26.9	16.9	31.3	47.2
- Fellowships/Dissertation Grants	%	27.5	30.7	26.3	21.1

- Other	%	0.2	0.2	—	0.0

Source: *Doctorate Recipients from United States Universities: Summary Report 2005*, p. 63.

Note: Includes only doctorate recipients who reported primary source of support.

In the physical sciences, which include mathematics and computer sciences, universities provided the primary support for 82.1% of temporary resident students, 73.1% for permanent residents, and 58.5% for U.S. citizens.³⁷ In engineering, 81.1% of temporary resident students received primary financial support from universities, as did 71.1% of permanent resident students, and 42.3% of U.S. citizen doctoral students. Even in those disciplines where foreign students do not participate with any degree of frequency (i.e., education and the social sciences), larger percentages of foreign doctoral students on temporary and permanent resident visas obtained their primary financial assistance from universities than did comparable U.S. students. In the field of education, 41.4% of temporary resident doctoral students received their primary financial support from universities; for permanent resident students, 38.7%, and for U.S. citizens, 13.3%. In the social sciences, universities provided financial support to 51.9% of temporary resident doctoral students, 41.2% for permanent residents, and 33.6% for U.S. citizens.

Perceived Benefits and Problems

There are divergent views in the scientific and academic community about the effects of a significant foreign presence in graduate science and engineering programs. Some argue that U.S. universities benefit from a large foreign citizen

³⁷ University support includes teaching assistantships, research assistantships, and research traineeships.

enrollment by helping to meet the needs of the university and, for those students who remain in the United States, the Nation's economy.³⁸

Foreign students generate three distinct types of measurable costs and benefits. First, 13 percent of foreign students remain in the United States, permanently increasing the number of skilled workers in the labor force. Second, foreign students, while enrolled in schools, are an important part of the workforce at those institutions, particularly at large research universities. They help teach large undergraduate classes, provide research assistance to the faculty, and make up an important fraction of the bench workers in scientific labs. Finally, many foreign students pay tuition, and those revenues may be an important source of income for educational institutions.³⁹

The increased participation of foreign students in graduate programs has generated critical responses by many in the minority community.⁴⁰ Blacks, Hispanics, and Native Americans, historically underrepresented in the science and engineering fields, contend that disparity exists in the university science community with respect to foreign students.⁴¹ It is charged that there is not equal access for U.S. minorities to graduate education, receipt of scholarships, promotion to higher ranks, receipt of research funds, access to outstanding research collaborators, and coauthorship of papers and other outlets for scientific publications. Frank L. Morris, professor, University of Texas, charges that colleges and universities employ exclusionary mechanisms. Rather than supporting minority graduate students, institutions provide the majority of their resources to departments that have admitted foreign students. In testimony before the Subcommittee on Immigration and Claims, Morris states that:

The generous immigration policy coupled with the much better and disproportionate and much better subsidy out of U.S. taxpayer funds of foreign doctoral student over all American minority students and especially much better than the support given to African American doctoral students. . . . This has created a situation that place the economic well being of the African American community in jeopardy because we have received inadequate doctoral training

³⁸ The Institute of International Education reports that foreign students contribute approximately \$13.5 billion annually to the U.S. economy in money from tuition, living expenses and related costs. The Department of Commerce estimates that U.S. higher education is the nation's fifth largest service sector export.

Betts, Associate Professor, Department of Economics, University of California, San Diego.

to prepare for or compete in an increasing information and higher order scientifically technologically driven current and future U.S. economy.⁴²

Another criticism noted by some is that foreign student teaching assistants do not communicate well with American students. Language as a barrier has been a perennial problem for some foreign students.⁴³ There are charges that the “accented English” of the foreign teaching assistants affects the learning process.⁴⁴ A large number of graduate schools require foreign teaching assistants to demonstrate their proficiency in English, but problems remain.⁴⁵ Several states have passed legislation setting English-language standards for foreign students serving as teaching assistants.⁴⁶

Some academics and scientists do not view scientific migration as a problem, but as a net gain. These proponents believe that the international flow of knowledge and personnel has enabled the U.S. economy to remain at the cutting-edge of science and technology. A 2005 report of the National Academies states that:

The participation of international graduate students and postdoctoral scholars is an important part of the research enterprise of the United States. In some fields they make up more than half the populations of graduate students and postdoctoral scholars. If their presence were substantially diminished, important research and teaching activities in academe, industry, and federal laboratories would be curtailed, particularly if universities did not give more attention to recruiting and retaining domestic students.⁴⁷

Foreign Scientists and Engineers in the U.S. Labor Force

During the 1980s, the number of immigrant scientists and engineering entering the United States remained somewhat stable (12,000), registering only slight annual increases. In 1992, there was a marked increase in the admissions of scientists and engineering, fueled primarily by the changes in the Immigration Act of 1990 that

⁴² Ibid., Testimony of Frank L. Morris, Sr., p. 33.

⁴³ In addition to the Korean, Japanese, Vietnamese, Chinese, Arabic and Spanish speaking students, there are the other languages such as Malay, Thai, Indonesian, Tongan, Ibo, Tagalog, Hungarian, Haitian, Creole, and Farsi.

⁴⁷ *Policy Implications of International Graduate Students and Postdoctoral Scholars in the United States*, p. 65.

allowed significant increases in employment-based quotas of H-1B visas. By 1993, the number of scientists and engineers on permanent visas increased to 23,534.⁴⁸ The numbers were increased further as a result of the Chinese Students Protection Act of 1992.⁴⁹ *Science & Engineering Indicators 2004* reports that the proportion of foreign born scientists and engineers in the U.S. labor force reached a record in 2000, revealing high levels of entry by holders of permanent and temporary visas during the 1990s. The issuance of permanent visas in the past few years has been impacted by administrative changes at the U.S. Citizenship and Immigration Services, changes in immigration legislation, and any impact of September 11th.

Foreign scientists and engineers on temporary work visas have generated considerable discussion. As previously stated, recent legislation has increased the annual quota for the H-1B program in which foreign-born workers can obtain visas to work in an occupation for up to six years. The H-1B program, generally, is thought of as an entry for technology workers, but it is used also to hire other skilled workers.⁵⁰ *Science & Engineering Indicators 2002* states that “An H-1B visa is sometimes used to fill a position not considered temporary, for a company may view an H-1B visa as the only way to employ workers waiting long periods for a permanent visa.”⁵¹ Data on selected occupations for which companies have been given permission to hire H-1B visa workers are contained in Table 4.

⁴⁸ National Science Foundation, *Major Declines in Admissions of Immigrant Scientists and Engineers in Fiscal Year 1994*, NSF97-311, Arlington, VA, June 18, 1997, p. 1.

⁴⁹ As an outgrowth of the 1989 Tiananmen Square uprising, Chinese students residing temporarily in the United States were allowed to adjust to permanent resident status in 1993.

⁵⁰ Data from the Office of Immigration Statistics reveal that the industry employing the largest number of H-1B workers in FY2003 was computer systems design and related services. There was a 12% increase from FY2002 to FY2003 in the employment of H-1B workers in computer related positions. Department of Homeland Security, Office of Immigration Statistics, “Characteristics of Speciality Occupation Workers (H-1B): Fiscal Year 2003,” November 2004, p. 20.

⁵¹ National Science Foundation, *Science and Engineering Indicators 2002*, Volume I, NSB02-1, Arlington, VA, January 15, 2002, p. 3-32.

Table 4. H-1B Petitions Approved by Major Occupation Group, Fiscal Year 2005

Occupation	Total	Percent
Computer-Related Occupations	113,867	43.00
Engineering, Architecture, and Surveying)	32,030	12.10
Medicine and Health	17,360	6.60
Miscellaneous Professional, Technical, and Managerial	5,542	2.10
Life Sciences and Social Sciences	14,912	5.60
Mathematics and Physical Sciences	6,600	2.50
Education	29,061	11.00
Other	47,759	17.90
Total	267,131	100.00

Source: U.S. Department of Homeland Security, *U.S. Citizenship and Immigration Services, Characteristics of Speciality Occupation Workers (H-1B): Fiscal Year 2005*, November 2006, 22 pp. NOTE: “During fiscal year 2005, USCIS approved 267,131 H-1B petitions submitted by employers on behalf of alien workers. The number of approved petitions exceeds the number of individual H-1B workers because more than one U.S. employer may file a petition on behalf of individual H-1B workers (multiple petitions). The number of approved petitions for initial employment exceeds the cap because of employer-based cap exemptions and multiple petitions for individuals. For example, approved petitions for initial employment are exempt from the cap if the sponsors are institutions of higher education or nonprofit organizations affiliated with institutions of higher education; the sponsors are nonprofit research organizations or governmental research organizations; or a beneficiary has a U.S. advanced degree.” p. 5.

Some argue that the influx of immigrant scientists and engineers has resulted in depressed job opportunities, lowered wages, and declining working conditions for U.S. scientific personnel. While many businesses, especially high-tech companies, have recently downsized, the federal government issued thousands of H-1B visas to foreign workers. There are those in the scientific and technical community who contend that an over-reliance on H-1B visa workers to fill high-tech positions has weakened opportunities for the U.S. workforce.⁵² Many U.S. workers argue that a number of the available positions are being filled by foreign labor hired at lower salaries.⁵³ Those critical of the influx of immigrant scientists have advocated placing restrictions on the hiring of foreign skilled employees in addition to enforcing the

⁵² Schwartz, Ephraim, “H-1B: Patriotic or Treasonous?,” *InfoWorld*, v. 27, May 6, 2005, [http://www.infoworld.com/article/05/05/06/19NNh1b_1.html], and Matloff, Norman, “Should the U.S. Increase its H-1B Visa Program? Con: Wages Belie Claims of a Labor Shortage,” *SFGate.com*, December 7, 2006.

⁵³ See for example Gamboa, Suzanne, “Visas for High-Tech Workers Draw Query,” *The Washington Post*, May 14, 2007, Jorddan, Miriam, Pui Wing Tam and Lauren Etter, “Business Divided As Debate Opens On Immigration,” *The Wall Street Journal*, May 22, 2007, p. A1, and Moscoso, Eunice, “Visa Program Ripe for Abuse, Critics Charge,” *The Austin American Statesman*, May 13, 2007.

existing laws designed to protect workers. Those in support of the H-1B program maintain that there is no “clear evidence” that foreign workers displace U.S. workers in comparable positions and that it is necessary to hire foreign workers to fill needed positions, even during periods of slow economic growth.⁵⁴ A September 2003 report of the General Accounting Office (GAO), *H-1B Foreign Workers, Better Tracking Needed to Help Determine H-1B Program’s Effects on U.S. Workforce*, states that:

While a number of employers acknowledged that some H-1B workers might accept lower salaries than U.S. workers, the extent to which wage is a factor in employment decisions is unknown. Labor’s Wage and Hour Division (WHD), which is responsible for ensuring that H-1B workers are receiving legally required wages, has continued to find instances of program abuse. The extent to which violations of the H-1B program take place is unknown and may be due in part to WHD’s limited investigative authority.⁵⁵

The maturing of the computer industry has wrought its own set of problems relative to employment of foreign scientists and engineers.⁵⁶ There are some who contend that the salary of the foreign-born computer professionals working in the United States is lower than that of their U.S. counterparts who are the same age and educational level. Others charge that the hiring of H-1B workers “undermines the status and bargaining position of U.S. workers.”⁵⁷ The Department of Labor has sought to enforce the existing policies on temporary employment of nonimmigrant foreign workers under H-1B visas, and to penalize those employers who are found to be in violation.

Many in the scientific community maintain that in order to compete with countries that are rapidly expanding their scientific and technological capabilities, the United States needs to bring in those whose skills will benefit society and will enable

⁵⁴ See for example Anderson, Stuart, and Michaela Platzer, “Should the U.S. Increase its H-1B Visa Program? PRO: Skilled Immigrants Innovate,” *SFGate.com*, December 7, 2006, Baker, Chris, “Visa Restrictions Will Harm U.S. Technology, Gates Says; Microsoft Chief Calls For End to Caps On Workers,” *The Washington Times*, April 29, 2005, p. ⁵⁷ See for example Abate, Tom, “H-1B Federal Immigration Bill: Reforms to the Work Visa Program are a Small Part of the Overall Debate — Except in Silicon Valley,” *The San Francisco Chronicle*, May 27, 2007, and Miano, John, *Low Salaries for Low Skills — Wages and Skill Levels for H-1B Computer Workers, 2005*, Center for Immigration Studies, April 2007, 12 pp.

us to compete in the new-technology-based global economy. Individuals supporting this position do believe that the conditions under which foreign talent enters U.S. colleges and universities and the labor force should be monitored more carefully.⁵⁸ And there are those who contend that the underlying concern of foreign students in graduate science and engineering programs is not necessarily that there are too many foreign-born students, but that there are not enough native-born students entering the scientific and technical disciplines.⁵⁹

In testimony before the House Subcommittee on 21st Century Competitiveness and Select Education, C.D. Mote, Jr., President, University of Maryland, College Park, stated that :

Other nations are competing effectively for [foreign students and scholars in science and engineering] and will gain technological advances, weakening our economic and technological position and our security. New contenders in the fiercely competitive environment of higher education emerge daily. China has set a goal to greatly increase over the next decade the number of universities, and some will be of world-class stature. Taiwan and Japan also plan to build top universities. Though most of the world's top universities are currently in the U.S., many are determined to change this balance, and they probably will. To remain competitive in the coming decades, we must continue to embrace the most capable students and scholars of other countries. Our security and quality of life depend on it.⁶⁰

Policy Implications

The debate on the presence of foreign students in graduate science and engineering programs and the workforce has intensified as a result of the terrorist attacks of September 11, 2001. It has been reported that foreign students in the

⁵⁸ A June 2006 report of the GAO revealed that from January 2002 through September 2005, approximately 33% of the H-1B visa applications were for workers in computer system analysis and programming occupations. The next highest requesting group was those of college and university education workers, at approximately 7%. The GAO report found certified visa applications with inaccurate information and that the review process itself lacked quality assurance controls. Government Accountability Office, *H-1B Visa Program-Labor Could Improve Its Oversight and Increase Information Sharing with Homeland Security*, GAO-06-720, Washington, DC, June 2006, 52 pp. NOTE: Effective July 7, 2004, the GAO's legal name became the Government Accountability Office, a provision of the GAO Human Capital Reform Act of 2004, P.L. 108-271, 118 Stat.

⁵⁹ See for example National Science Foundation, *Investing in America's Future — Strategic Plan FY2006-2011*, NSB06-48, Arlington, VA, September 2006, pp. 2-4.

⁶⁰ House Committee on Education and the Workforce, Subcommittee on 21st Century Competitiveness and Select Education Committee on Education and the Workforce, *Tracking International Students in Higher Education: A Progress Report*, 109th Cong., 1st Sess., March 17, 2005, Written testimony of C.D. Mote, Jr., President, University of Maryland, College Park.

United States are encountering “a progressively more inhospitable environment.”⁶¹ A June 2006 report of the Association of International Educators, *Restoring U.S. Competitiveness for International Students and Scholars*, states that “. . . [F]or the first time, the United States seems to be losing its status as the destination of choice for international students.”⁶²

Concerns have been expressed about certain foreign students receiving education and training in sensitive areas.⁶³ There has been increased discussion about the access of foreign scientists and engineers to research and development (R&D) related to chemical and biological weapons. Also, there is discussion of the added scrutiny of foreign students from countries that sponsor terrorism.⁶⁴ The academic community is concerned that the more stringent requirements of foreign students may have a continued impact on enrollments in colleges and universities.⁶⁵ Others contend that a possible reduction in the immigration of foreign scientists may affect negatively on the competitiveness of U.S. industry and compromise commitments made in long-standing international cooperative agreements.⁶⁶

⁶¹ House Committee on the Judiciary, Subcommittee on Immigration, Border Security, and Claims, *Sources and Methods of Foreign Nationals Engaged in Economic and Military Espionage*, 109th Cong., 1st Sess., September 15, 2005, Written testimony of William A. Wulf, President, National Academy of Engineering, p. 12., and Foroohar, Rana, “America Closes Its Doors,” [<http://msnbc.msn.com/id/6038977/site/newsweek>].

Wulf, President, National Academy of Engineering, and Harvey Fineberg, President, Institute of Medicine, December 13, 2002, [<http://www4.nationalacademies.org>].

The issue of tracking foreign students attending U.S. institutions has generated particular debate in the academic and scientific community following the September 11th terrorist attacks.⁶⁷ Prior to September 11th, the Illegal Immigration Reform and Immigrant Responsibility Act (P.L. 104-208) authorized the Student and Exchange Visa Program/Coordinated Interagency Partnership Regulating International Students (SEVP/CIPRIS).⁶⁸ This electronic information reporting system for tracking foreign students and researchers was to replace the existing paper-based format. The legislation required colleges and universities to monitor and compile data on foreign students attending their respective institutions in such areas as date of enrollment/reporting, field of study, credits earned, and source of financial support for the student.⁶⁹ The information was to be provided to the INS by the colleges and universities. However, the system was never fully implemented, primarily because institutions described it as being too costly, an “unnecessary burden on colleges and universities,” and “an unreasonable barrier to foreign students.”⁷⁰

The USA Patriot Act (P.L. 107-56) and the Enhanced Border Security and Visa Entry Reform Act (P.L. 107-173) revised and enhanced the process for collecting and monitoring data on foreign students and researchers in U.S. institutions.⁷¹ In response to the legislation, the INS developed the Student and Exchange Visitor Information System (SEVIS). SEVIS, a web-based system, was designed to maintain current information on foreign students and exchange visitors in order to ensure that they arrive in the United States, register at the institution or predetermined exchange program, and properly maintain their visa status during their stay.⁷² Congress directed the then INS to have the tracking system in operation by January 30, 2003.

⁶⁷ Homeland Security Presidential Directive 2, “Combating Terrorism Through Immigration Policies,” and American Association for the Advancement of Science, Science & Technology in Congress, “Tracking Foreign Students,” November 2001, pp. 1, 4, 6.

⁶⁸ The Illegal Immigration Reform and Responsibility Act was signed into law on October 1, 1996.

⁶⁹ Colleges and universities were required to collect the information, but were not required to automatically report it to the INS.

⁷⁰ Marlene M., Executive Director and CEO, Association of International Educators, “Thinking Clearly About Foreign Students and Terrorism,” September 20, 2001, Peterson, Jonathan, and Trounson, Rebecca, “Foreign Students Being Checked, INS Asked to Create Computerized System,” *Pittsburgh Post-Gazette*, September 29, 2001, p. A-5, Sheridan, Mary Beth, “Visa Tracking System Limited by Lack of Personnel,” *Washington Post*, February 25, 2002, p. A03, Zernike, Kate and Drew, Christopher, “A Nation Challenged: Student Visas; Efforts to Track Foreign Students are Said to Lag,” *New York Times*, January 28, 2002, p. 1A, and “U.S. Urged to Give More Details on Database for Tracking Foreign Students,” *The Chronicle of Higher Education*, v. 48, February 8, 2002, p. A22.

⁷¹ The USA Patriot Act was signed into law on October 26, 2001. The Enhanced Border Security and Visa Reform Act was signed into law on May 14, 2002.

⁷² For expanded discussion of SEVIS see CRS Report RL32188, *Monitoring Foreign Students in the United States: The Student and Exchange Visitor Information System (SEVIS)*, by Alison Siskin.

The deadline for implementation of SEVIS was extended to February 15, 2003.⁷³ However, SEVIS experienced considerable problems and created excessive delays in processing visa applications.⁷⁴ The more rigorous screening of visa applicants was one factor contributing to the delays.⁷⁵ The current problems with SEVIS are reported to be primarily those relating to technical matters and personnel costs.

On September 13, 2005, the House Subcommittee on National Security, Emerging Threats, and International Relations held a hearing to examine the procedures put in place to correct the gaps and vulnerabilities in the visa process.⁷⁶ Attention was directed at the mechanisms that are necessary to strengthen the visa process as an antiterrorism tool while simultaneously facilitating legitimate travel by foreign students, scientists, researchers, and others in the United States.⁷⁷ Witnesses testified that consular workloads had increased significantly, yet the visa-processing offices continued to lack strategic direction, adequate resources, and training. In addition, reliable data were not readily available, across and among departments and agencies, to determine security and visa fraud related issues and overall increased visa wait times.⁷⁸ Witnesses stated that because visa policies and requirements are ongoing and can change quickly, clear procedures on visa issuance and monitoring operations worldwide are necessary to guarantee that visas are adjudicated in a consistent manner at each visa-issuing post.

⁷³ The deadline for implementation of SEVIS was extended to February 15, 2003. August 1, 2003 was the date by which all institutions must enter data into SEVIS for those students who were enrolled prior to January 30, 2003. NOTE: In addition to SEVIS, the Department of State requires institutions to submit, electronically, basic biographic information about their foreign students. The information becomes part of the Department of State's new Interim Student and Exchange Authentication System (IDEAS), a temporary Web-based international student information collection system required by the Enhanced Border Security Act of 2001. IDEAS is separate from SEVIS and directs that institutions submit the necessary information to both systems. IDEAS went into effect on September 11, 2002 and will remain operational until SEVIS achieves total implementation.

B01, Greene, Marcia Slacum, "Computer Problems Slow Tracking of Foreign Students," *Washington Post*, March 26, 2003, p. A06, and Arnone Michael, "Colleges Expect the Worse in Preparing for New System to Track Foreign Students," *The Chronicle of Higher Education*, v. 49, September 6, 2002, p. A33. NOTE: Less than 2% of all visas issued are student visas.

⁷⁵ For a discussion of the screening process and review procedures for visa issuance, see, for example, John Marburger, Director, Office of Science and Technology Policy, Speech before the American Association for the Advancement of Science, Science and Technology Policy Colloquium, April 10, 2003, Washington, DC. p. 5.

⁷⁶ House Committee on Government Reform, Subcommittee on National Security, Emerging Threats, and International Relations, *Combating Terrorism: Visas Still Vulnerable*, 109th Cong., 1st Sess., September 13, 2005.

⁷⁷ All 19 of the terrorists of the September 11th attacks had been issued temporary visas.

⁷⁸ The State Department's database did not have any information linking the September 11th attackers with terrorists activities, however, there was information in other agencies' databases.

The Government Accountability Office (GAO) has released several reports detailing the efforts and the improvements that have been made in the visa processing. Other reports of the GAO assessed agencies' progress in implementing recommended changes in visa operations.⁷⁹ An April 4, 2006 report — *Border Security, Reassessment of Consular Requirements Could Help Address Visa Delays*, stated that while steps have been taken to improve the visa application system, additional issues required immediate attention.⁸⁰ The recommendations included clarifying visa policies and procedures in order to facilitate their implementation, and ensuring that consular officers have access to the needed tools to improve national security and promote legitimate travel.

Comprehensive immigration reform legislation is currently under consideration in the 110th Congress. S.Amdt. 1150 to S. 1348 would, among other things, ease the restrictions on foreign students in scientific and technical disciplines. The bill would increase the annual quota for highly educated temporary workers on H-1B visas from 65,000 to 115,000, and provide for a potential annual increase in the ceiling by 20%. The bill would expand the types of individuals who would no longer be subjected to the annual limits on legal immigrants. Included in this group would be those who: (1) hold an advanced degree in science, mathematics, engineering, or technical fields and who have been working in the United States in a related field for three years on a nonimmigrant visa; (2) been awarded a medical specialty certification based on post-doctoral training and experience in the United States; and (3) work in shortage occupations as designated by the Secretary of Labor. S.Amdt. 1223 to S.Amdt 1150 would establish the American Competitiveness Scholarship Program. This amendment would increase the fees employers pay for H-1B visa petitions from \$1,500 to \$5,000 per visa. The fees collected would be placed in a supplemental H-1B nonimmigrant petitioner account and would be made available to the NSF to award scholarships to U.S. students pursuing degrees in science, mathematics, technology, health care, and computer science.

⁷⁹ See for example Government Accountability Office, *Border Security: Stronger Actions Needed to Assess and Mitigate Risks of the Visa Waiver Program*, GAO-06-1090T, September 7, 2006, 23 pp., *H-1B Visa Program: More Oversight by Labor Can Improve Compliance with Program Requirements*, GAO-06-901T, June 22, 2006, 20 pp., *Border Security: Strengthened Visa Process Would Benefit from Improvements in Staffing and Information Sharing*, GAO-05-859, Washington, DC, September 2005, 55 pp., and *Border Security: Streamlined Visas Mantis Program Has Lowered Burden on Foreign Science Students and Scholars, but Further Refinements Needed*, GAO-05-198, Washington, DC, February 18, 2005, 39 pp.
