R42055

Summary

The total U.S. civilian non-institutionalized population in 2010 was estimated to be slightly more than 304 million. Roughly 84.5% of the U.S. civilian non-institutionalized population had one or more forms of health insurance, while 15.5%, or roughly 47.2 million, were uninsured. The most common form of insurance was employer provided.

This report employs the U.S. Census Bureau's 2010 American Community Survey (ACS) to describe health insurance coverage and provide estimates of coverage by type of coverage at the national, state, and congressional district level. The ACS survey has a sample of more than 2 million respondents and solicits health insurance coverage information as of the date of the survey. The sample is large enough to provide accurate estimates of coverage at the congressional district level at a point in time. As this report details, there are considerable differences across states, within states, and across demographic groups in the proportion of insured and their sources of coverage.

The insured were more likely to be white or Asian, more educated, higher income, elderly, and female. The uninsured were more likely to be African American or Hispanic, less educated, lower income, non-elderly adult, and male. In general, the uninsured are more likely to report problems getting needed medical care and to be hospitalized for avoidable health problems.

Background

While not on a continuous upward track, the number of uninsured in the United States has been growing over the past decade.¹ Conversely, the proportion of individuals with insurance coverage has declined. In addition, recent reforms under the Patient Protection and Affordable Care Act (PPACA, P.L. 111-148, as amended), expanding coverage for young adults up to 26 years of age, are potentially changing the characteristics of the insured and uninsured. This report employs the U.S. Census Bureau's 2010 American Community Survey (ACS) to describe health insurance coverage and provide estimates of coverage by type of coverage at the national, state, and congressional district level.

PPACA was designed, in part, to expand access to health insurance. For instance, beginning with renewals from September 23, 2010, PPACA provides that dependent children up to age 26 can remain on their parent's health insurance generally beginning with the next subsequent renewal. Beginning in 2014, or sooner at state option, PPACA requires states to expand Medicaid to certain individuals who are under age 65 with income up to 133% of the federal poverty level (FPL). This reform not only expands eligibility to a group that is not currently universally eligible for Medicaid (low income childless adults), but also raises Medicaid's mandatory income eligibility level for certain existing groups to 133% of the FPL.² The Congressional Budget Office (CBO) and Joint Committee on Taxation estimate that the coverage expansion provisions in the health reform law will result in a Medicaid enrollment increase, over what otherwise would have been the case, of approximately 16 million individuals by FY2019.³

Under PPACA, states are to establish health insurance exchanges that provide eligible individuals and small businesses with access to health insurance. In addition, certain individuals with incomes greater than 133% of FPL up to 400% of FPL are eligible for premium tax credits and cost-sharing subsidies. CBO estimates that 24 million individuals will obtain health insurance through an exchange and 5 million more will obtain their insurance through their employer's participation in an exchange. While some individuals who are currently privately insured will be covered through an exchange in the future, CBO estimates that, on net, PPACA will reduce the number of uninsured by 32 million by 2019, leaving 23 million (or 6%) of non-elderly Americans uninsured.⁴

¹ As discussed below, the number of uninsured varies by survey. In addition, some surveys have modified their data collection processes such that comparison over the past decade even using the same survey is problematic. However, depending on the survey, and the reference period (anytime, reference period, etc.), the increase between 2000 and 2009 ranges from 5% to 17%. See, http://www.meps.ahrq.gov/mepsweb/data_files/publications/st259/stat259.pdf, <http://facts.kff.org/chart.aspx?ch=479>; <http://facts.kff.org/chart.aspx?ch=1851>.

² PPACA extended Medicaid coverage of children 6 through 18 up to 133% of FPL but the subsequent Medicare and Medicaid Extenders Act of 2010 (P.L. 111-309) deferred this expansion until 2014. For individuals whose income will be determined using the new income counting rules, the law also specifies that an income disregard in the amount of 5% FPL be deducted from an individual's income when determining Medicaid eligibility. This income counting rule effectively raises the upper income eligibility threshold for the new Medicaid eligibility group to 138% FPL.

⁴ *Ibid.*

Health Insurance Coverage in 2010

Roughly 85% of Americans were covered by health insurance in 2010.⁵ The insured were more likely to be⁶

- white or Asian,
- more educated,
- higher income,
- elderly, and
- female.

The uninsured, about 15% of the population, were more likely to be⁷

- African American or Hispanic,
- less educated,
- lower income,
- non-elderly adult, and
- male.

In general, the uninsured were more likely to⁸

- report problems getting needed medical care, and
- be hospitalized for avoidable health problems.

As this report details, there are considerable differences across states, within states, and across demographic groups in the proportion of insured and their sources of coverage.⁹ The Medicare program has effectively provided health insurance to almost all elderly Americans, while the Medicaid program and the Children's Health Insurance Program (CHIP) have expanded health insurance coverage to certain low-income families and children, among others. State policies to expand health insurance coverage, including through Medicaid waivers, account for some of the

⁵ See American Community Survey, 2010, Table S2701, http://factfinder2.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=ACS_10_1YR_S2701&prodType=table. While the actual proportion of insured and uninsured, as well as estimates of coverage type, vary from survey to survey, the various federally sponsored surveys provide consistent and reliable estimates over time. See Office of the Assistant Secretary for Planning and Evaluation, *Understanding Estimates of the Uninsured: Putting the Differences in Context*, Department of Health and Human Services, ASPE Issue Brief, Washington, DC, September 2005, <http://aspe.hhs.gov/health/reports/05/uninsured-understanding-ib/index.htm>.

⁷ Congressional Research Service analysis of the U.S. Census Bureau, 2010 American Community Survey (ACS); The Henry J. Kaiser Family Foundation, *The Uninsured: A Primer*, Washington, DC, December 2010, <http://www.kff.org/uninsured/upload/7451-06.pdf>.

⁸ The Henry J. Kaiser Family Foundation, *The Uninsured: A Primer*, Washington, DC, December 2010, <http://www.kff.org/uninsured/upload/7451-06.pdf>.

⁹ No statistical test of these differences was performed and these differences may not be statistically significant.

differences across states in the proportion of uninsured.¹⁰ For instance, Vermont has extended Medicaid benefits to childless adults with incomes up to 150% of the federal poverty level (FPL), and only 8.05% of the state's population was uninsured in 2010.¹¹ Similarly, state policies such as employer or personal mandates to purchase health insurance in Hawaii and Massachusetts further explain some of the differences.

The explanation for variations in health insurance coverage among working adults is complex, since it must consider decisions on the part of employers to offer coverage and decisions regarding the nature of the coverage, including cost sharing, if insurance is offered. In addition, it needs to take into consideration employees' decisions to purchase insurance. According to the Kaiser Family Foundation, 61% of the non-elderly population received employer-sponsored health insurance in 2009.¹² While employer-based health insurance is nearly universally offered by large employers (over 200 employees), only 48% of small firms (three to nine employees) offered health insurance in 2011.¹³ Thus, the working uninsured, poor, and unemployed who are not otherwise eligible for a public program, covered under a family member's policy, or cannot afford employer-sponsored coverage are either relegated to the individual market, which can be more expensive, or do without coverage.

To understand those who are employed and have health insurance, one needs to understand the decision-making process that firms engage in when deciding whether to offer employees health insurance and how to share these costs. While many policy analysts have focused on the tax treatment of health insurance premiums as one impetus for employer provided health insurance, other factors such as local labor market conditions and company image are also likely to play a role in these decisions. Even if one is employed and works for a firm that offers health insurance, there is a further set of calculations that employees make regarding whether to take up the offer of health insurance. These considerations include one's current health status, one's expectation of future health insurance requirements, cost (including cost sharing of the premium, deductibles, and coinsurance), and the availability of other benefits through Section 125 cafeteria plans (where employees can personalize benefits from a set of offerings). In 2005, it was estimated that about 7% of those who are offered employer health insurance were actually uninsured.¹⁴ All of these factors, in addition to others, will affect the proportion of working age Americans with or without health insurance.

This report analyzes health insurance coverage in the United States in 2010 using the American Community Survey. After a brief methodological section, the body of this report consists of a series of national and state tables detailing health insurance coverage and coverage by age, gender, and employment status. The **Appendix** to this report details coverage in the 50 states, the

District of Columbia, and by congressional district and age. The **Appendix** presents a table for each state and the District of Columbia.

Methodology

This report employs the U.S. Census Bureau's 2010 American Community Survey (ACS) to describe health insurance coverage and provide estimates of coverage by type of coverage at the national, state, and congressional district level.¹⁵ The survey is briefly described below and more fully documented at the U.S. Census Bureau's website.¹⁶

The ACS is representative of the civilian non-institutionalized population and is designed to produce reliable estimates of coverage and the number of uninsured at the time of the survey. Respondents in the 2010 survey were sampled between January 1 and December 31, 2010. The ACS is a mailout/mailback survey with telephone and in-person nonresponse follow-up, conducted continuously throughout the year, with results consolidated to produce annual estimates using 90% confidence intervals.

The Survey Question

The ACS contains a single multipart question (question 16) addressing health insurance coverage. Respondents are asked to respond with respect to their current coverage as of the date they are surveyed. The question is replicated below. Someone who responds "no" to every item is characterized as uninsured.¹⁷ In addition, the survey question allows individuals to indicate if they have several forms of health insurance coverage. The survey question does not elicit information about changes in coverage over the course of the year.

¹⁵ The 2010 American Community Survey dataset was released by the U.S. Census Bureau in September 2011.

¹⁶ <http://www.census.gov/acs/www>.

¹⁷ Individuals who report "Yes" only to Indian Health Service are counted as uninsured by the Census Bureau.

ACS Health Insurance Question

16. Is this person CURRENTLY covered by any of the following types of health insurance or health coverage plans? Mark “Yes” or “No” for EACH type of coverage for items a – h.

	Item	Yes	No
a.	Insurance through a current or former employer or union (of this person or another family member)	<input type="checkbox"/>	<input type="checkbox"/>
b.	Insurance purchased directly from an insurance company (by this person or another family member)	<input type="checkbox"/>	<input type="checkbox"/>
c.	Medicare, for people 65 or older, or people with certain disabilities	<input type="checkbox"/>	<input type="checkbox"/>
d.	Medicaid, Medical Assistance, or any kind of government-assistance plan for those with low incomes or a disability	<input type="checkbox"/>	<input type="checkbox"/>
e.	TRICARE or other military health care	<input type="checkbox"/>	<input type="checkbox"/>
f.	VA (including those who have ever used or enrolled for VA health care)	<input type="checkbox"/>	<input type="checkbox"/>
g.	Indian Health Service	<input type="checkbox"/>	<input type="checkbox"/>
h.	Any other type of health insurance or health coverage plan – Specify _____	<input type="checkbox"/>	<input type="checkbox"/>

Source: U.S. Census Bureau, 2010 American Community Survey (ACS).

The ACS and Other Surveys of the Uninsured

There are several national surveys that estimate health insurance coverage including, among others, the Annual Social and Economic Supplement of the Current Population Survey (CPS), the American Community Survey (ACS), and the National Health Interview Survey (NHIS). Each of these efforts have limitations—many of which have been well documented and acknowledged by the Census Bureau and other research organizations.¹⁸ For example, the CPS and NHIS have historically undercounted Medicaid beneficiaries, and estimates are less reliable for small states.¹⁹

The ACS, with a sample size of roughly 2 million completed surveys per year, allows for reasonably accurate estimates of areas with a population of 65,000 or more. Therefore, the ACS does a better job of reducing error associated with small sample size as compared to either the CPS or NHIS. However, regardless of the survey used, discrepancies exist between survey estimates and estimates based on state and national administrative data.

¹⁸ See Thomas J. Plewes, Rapporteur National Research Council and National Research Council, “Federal Surveys,” in *Databases for Estimating Health Insurance Coverage for Children: A Workshop Summary*, http://www.nap.edu/catalog.php?record_id=13024 ed. (Washington, DC: National Academies Press, 2010).

¹⁹ U.S. Census Bureau, “Income, Poverty, and Health Insurance Coverage in the United States: 2008,” Current Population Reports P60-236(RV), Washington, DC, 2009, at <http://www.census.gov/prod/2009pubs/p60-236.pdf>, p. 20 and p. 57.

The ACS is not without its limitations, including that²⁰

- it is primarily a mail survey completed without the assistance of an interviewer;
- there is a single health insurance question that uses an itemized list of coverage types;
- the survey does not clearly delineate the coverage categories or clearly direct respondents that “direct purchase” of insurance in the individual market should be completely independent of a current or former employer; and
- the characterization of uninsured is not collected directly, rather uninsured status is derived from the answers to the various types of coverage and the result is not verified.

Despite these limitations, the ACS produces results that are generally very similar to those obtained from other surveys, and the larger sample size allows for reliable state and congressional district estimates of the uninsured.²¹

Insurance Coverage: National Analysis 2010

The total U.S. civilian non-institutionalized population in 2010 was estimated to be slightly more than 304 million. Roughly 84.5% of the U.S. civilian non-institutionalized population had one or more forms of insurance while 15.5%, or roughly 47.2 million, were uninsured.²² The most common form of insurance was employer provided (see **Table 1**).²³

Table 2 presents insurance coverage by age and shows that employer provided health insurance was the single most common form of insurance for individuals under age 65. For those aged 65 and above, the most common form of insurance was Medicare coupled with either an employer provided form of insurance or a Medicare supplemental policy (e.g., a Medigap policy).

²⁰ Thomas J. Plewes, Rapporteur National Research Council and National Research Council, “Federal Surveys,” in *Databases for Estimating Health Insurance Coverage for Children: A Workshop Summary*, http://www.nap.edu/catalog.php?record_id=13024 ed. (Washington, DC: National Academies Press, 2010).

²¹ Ibid.

²² For a detailed discussion of the uninsured, see CRS Report R41621, *The Uninsured by State and Congressional District*, by (name redacted).

²³ The Census Bureau breaks out insurance coverage information in two formats: one as depicted in **Table 1** detailing all forms of coverage and one as depicted in **Table 3** detailing whether individuals had a particular form of insurance. The first format (e.g., **Table 1**) details the variety of coverages an individual can have. This format is not a particularly good source of detailed information on Medicare and Medicaid coverage since beneficiaries of these programs may fit into multiple categories such as Medicare and Medicaid, other public combinations, and employer or direct purchase and Medicare. With the above caveat in mind, Medicaid beneficiaries are most likely, but not exclusively, to be found in the Medicaid, Medicare and Medicaid, and other public combinations categories. Medicare beneficiaries may be found in the Medicare, Medicare and Medicaid, Employer/Direct Purchase and Medicare, and two or more other combination categories. The Medicare and Medicaid estimates found in the second table format (e.g., **Table 3**) are comparable to those found in other surveys.

Table 1. Insurance Coverage in the United States, 2010

Source: CRS analysis of the 2010 American Community Survey, U.S. Census Bureau.

When analyzing age, gender, and employment status (see **Table 3**), the Census Bureau provides a slightly different breakout of insurance coverage than presented in **Table 2**. **Table 3** shows:

- women, age 18-64, were more likely to have employer provided insurance, direct purchase insurance, or Medicaid compared to comparably aged men;
- employment status among those age 18-64 similarly had a strong relationship with type of insurance;
- individuals employed full-time were over 50% more likely to have employer provided health insurance compared to those employed part-time; and
- individuals who worked full-time were more than twice as likely to have employer provided health insurance as compared to those who did not work.

Table 4 presents type of health insurance coverage by state. Key findings include:

- New Hampshire, Massachusetts, Connecticut, New Jersey, Minnesota, and Utah had the highest reported percentages of employer-only health insurance—each at more than 54%; Florida, Mississippi, and New Mexico had the lowest percentage of survey respondents reporting employer-only health insurance;
- North Dakota, South Dakota, and Montana had the highest percentage of respondents reporting direct-purchase health insurance only, while Alaska, Delaware, and West Virginia had the lowest percentage of respondents reporting direct-purchase health insurance only;
- Alaska, Hawaii, and Virginia had the highest percentage of respondents reporting TRICARE/military or VA health insurance only, while New York, New Jersey, and Massachusetts had the lowest percent of respondents reporting TRICARE/military or VA health insurance only; and
- Massachusetts had the lowest rate of uninsured and Texas the highest.²⁴

Table 5 presents type of health insurance coverage by gender among those age 18 through 64. Key findings include that

²⁴ See CRS Report R41621, *The Uninsured by State and Congressional District*, by (name redacted).

- in all but three states—Hawaii, Massachusetts, and Wyoming—females, age 18-64, reported a higher percentage of employer provided health insurance than males;
- in Florida, Rhode Island, South Carolina, South Dakota, and Vermont, women reported employer provided health insurance at least 3 percentage points higher than men;
- differences between males and females, age 18 through 64, with respect to direct purchase health insurance were not as pronounced as employer provided health insurance. In 29 states women reported direct purchase health insurance more often than men. The differences were most pronounced in the District of Columbia, Nebraska, New Mexico, Oregon, and Rhode Island; and
- among the uninsured, in every state, the percentage of males, age 18 through 64, uninsured exceeds the percentage of similarly aged females. The largest percentage difference was in Vermont—7.24%. the smallest difference was in Wyoming—1.56%

(name redacted) originally authored this report, but he no longer works at CRS.

EveryCRSReport.com

The Congressional Research Service (CRS) is a federal legislative branch agency, housed inside the Library of Congress, charged with providing the United States Congress non-partisan advice on issues that may come before Congress.

EveryCRSReport.com republishes CRS reports that are available to all Congressional staff. The reports are not classified, and Members of Congress routinely make individual reports available to the public.

Prior to our republication, we redacted names, phone numbers and email addresses of analysts who produced the reports. We also added this page to the report. We have not intentionally made any other changes to any report published on EveryCRSReport.com.

CRS reports, as a work of the United States government, are not subject to copyright protection in the United States. Any CRS report may be reproduced and distributed in its entirety without permission from CRS. However, as a CRS report may include copyrighted images or material from a third party, you may need to obtain permission of the copyright holder if you wish to copy or otherwise use copyrighted material.

Information in a CRS report should not be relied upon for purposes other than public understanding of information that has been provided by CRS to members of Congress in connection with CRS' institutional role.

EveryCRSReport.com is not a government website and is not affiliated with CRS. We do not claim copyright on any CRS report we have republished.
