## Market-Based Greenhouse Gas Emission Reduction Legislation: 108<sup>th</sup> Through 116<sup>th</sup> Congresses

Congressional interest in market-based greenhouse gas (GHG) emission control legislation has fluctuated over the past 15 years. During that time, legislation has often involved market-based approaches, such as a cap-and-trade system or a carbon tax or fee program. Both approaches would place a price—directly or indirectly—on GHG emissions or their inputs (e.g., fossil fuels), both would increase the price of fossil fuels, and both would reduce GHG emissions to some degree. Both would allow emission sources to choose the best way to meet their emission requirements or reduce costs, potentially by using market forces to minimize national costs of emission reductions. Preference between the two approaches ultimately depends on which variable policymakers prefer to precisely control—emission levels or emission prices.

A primary policy concern with either approach is the economic impacts that may result from the program. Expected energy price increases could have both economy-wide impacts (e.g., on the U.S. gross domestic product) and disproportionate effects on specific industries and particular demographic groups. The degree of these potential effects would depend on a number of factors, including the magnitude, design, and scope of the program and the use of tax or fee revenues or emission allowance values.

This report includes a separate table for each Congress, comparing GHG emission reduction legislation by the following characteristics:

- **General framework:** the proposed program structure and scope in terms of emissions covered, multiple GHG emissions, or just carbon dioxide (CO<sub>2</sub>) emissions.
- **Covered entities/materials:** a list of the industries, sectors, or materials that would be subject to the program.
- **Emissions limit or target:** the GHG or CO<sub>2</sub> emissions target or cap for a specified year.
- **Distribution of allowance value or tax revenue:** how emission allowance value or carbon tax or fee revenue would be distributed.
- **Offset and international allowance treatment:** the degree to which offsets and international allowances could be used for compliance purposes and the types of offset activities that would qualify.
- **Mechanism to address carbon-intensive imports:** a U.S. GHG reduction program may create a competitive disadvantage for some domestic businesses, particularly carbon-intensive, trade-exposed industries.
- **Additional GHG reduction measures:** other mechanisms designed to further reduce GHG emissions that are not covered in the central program.

As the **figure** below illustrates, between the 108<sup>th</sup> and 111<sup>th</sup> Congresses, most of the introduced bills would have established cap-and-trade systems. Between the 112<sup>th</sup> and 115<sup>th</sup> Congresses, most of the introduced bills would have established carbon tax or emissions fee programs.

**Figure I. Number and Type of Introduced GHG Emission Reduction Bills**  
108<sup>th</sup> Congress through 116<sup>th</sup> Congress

**Source:** Prepared by CRS.

**Notes:** “Other Approaches” include (1) proposals that did not specify the overall framework but would have authorized EPA to establish a GHG emission reduction program, and (2) proposals that combine elements from a cap-and-trade system with price control features in a carbon tax or emissions fee system, sometimes described as hybrid approaches.

The proposals from the 116<sup>th</sup> Congress range in their scope of emissions covered from CO<sub>2</sub> emissions from fossil fuel combustion to multiple GHG emissions from a broader array of sources. In addition, the proposals differ by how, to whom, and for what purpose the fee revenues or allowance value would be applied. Some economic analyses indicate that policy choices to distribute the tax, fee, or emission allowance revenue would yield greater economic impacts than the direct impacts of the carbon price.

## Introduction

Human activities, particularly fossil fuel combustion and industrial operations, have raised the atmospheric concentration of carbon dioxide (CO<sub>2</sub>) and other greenhouse gases (GHG)<sup>1</sup> by about 40% over the past 150 years. Almost all climate scientists agree that these GHG increases have contributed to a warmer climate today and that, if they continue, will contribute to future climate change.<sup>2</sup> Although a range of actions that seek to reduce GHG emissions are currently underway or being developed on the international<sup>3</sup> and sub-national level (e.g., individual state actions or regional partnerships),<sup>4</sup> federal policymakers and stakeholders have different viewpoints over what to do, if anything, about future climate change and related impacts.

Congressional interest in GHG emission control legislation has fluctuated over the last 15 years. Proposals to limit GHG emissions have often focused on market-based approaches, such as a GHG emission cap-and-trade program or a GHG emissions tax (often referred to as a carbon tax) or fee.<sup>5</sup> In general, a market-based approach would place a price on GHG emissions (e.g., through an emissions cap or emission tax or fee), allowing covered entities to determine their pathway of compliance.<sup>6</sup>

This report provides a comparison of the legislative proposals from the 108<sup>th</sup> through the 116<sup>th</sup> Congresses that were and are designed primarily to reduce GHG emissions using market-based approaches such as cap-and-trade or carbon tax/fee programs. During this time frame, Members introduced multiple energy-related proposals that would have likely resulted in reductions in GHG emissions—legislation that promotes renewable energy<sup>7</sup> or encourages carbon capture and

<sup>1</sup> GHGs in the atmosphere trap radiation as heat, warming the Earth's surface and oceans. The primary GHGs emitted by human activities (and estimated by EPA in its annual inventories) include CO<sub>2</sub>, methane, nitrous oxide (N<sub>2</sub>O), sulfur hexafluoride (SF<sub>6</sub>), chlorofluorocarbons, hydrofluorocarbons (HFCs), and perfluorocarbons (PFCs). Other GHGs include carbonaceous and sulfuric aerosols, hydrochlorofluorocarbons, and elevated tropospheric ozone pollution generated by emissions of nitrogen oxides and volatile organic compounds, such as solvents.

<sup>2</sup> For the latest U.S. assessment of the human contribution to climate change, see Intergovernmental Panel on Climate Change, *Global Warming of 1.5°C, Special Report*, 2018; and U.S. Global Change Research Program, *Fourth National Climate Assessment, vol. II: Impacts, Risks, and Adaptation in the United States*, 2018. See also CRS Report R45086, *Evolving Assessments of Human and Natural Contributions to Climate Change*, by Jane A. Leggett.

<sup>3</sup> Some countries have levied carbon taxes (or something similar) for over 20 years. For a review of carbon prices in other countries, see OECD, *Effective Carbon Rates: Pricing CO<sub>2</sub> through Taxes and Emissions Trading Systems*, 2016, [http://www.oecd-ilibrary.org/taxation/effective-carbon-rates\\_9789264260115-en](http://www.oecd-ilibrary.org/taxation/effective-carbon-rates_9789264260115-en); and the Carbon Tax Center website at <http://www.carbontax.org/where-carbon-is-taxed>.

<sup>4</sup> A number of U.S. states have taken action requiring GHG emission reductions. The most aggressive actions have come from California and from the Regional Greenhouse Gas Initiative (RGGI)—a coalition of nine states from the Northeast and Mid-Atlantic regions. The RGGI is a cap-and-trade system that took effect in 2009 that applies to CO<sub>2</sub> emissions from electric power plants. (See CRS Report R41836, *The Regional Greenhouse Gas Initiative: Lessons Learned and Issues for Congress*, by Jonathan L. Ramseur) California established a cap-and-trade program that took effect in 2013. California's cap covers multiple GHGs, which account for approximately 85% of California's GHG emissions. For more details, see the California Air Resources Board website, <https://www.arb.ca.gov/cc/capandtrade/capandtrade.htm>. In addition to its emissions cap, California has adopted a range of other climate change mitigation policies (e.g., renewable energy portfolio standards).

<sup>5</sup> Other approaches may include performance-based or technology-based standards (e.g., best available control technology). See CRS Report R41973, *Climate Change: Conceptual Approaches and Policy Tools*, by Jane A. Leggett.

<sup>6</sup> The 1990 Clean Air Act Amendments established a market-based cap-and-trade program to control the air emissions (sulfur dioxide and nitrogen oxides) that lead to acid rain. Although controversial at its inception, the program is widely considered a success. See Gabriel Chan et al., *The SO<sub>2</sub> Allowance Trading System and the Clean Air Act Amendments of 1990: Reflections on Twenty Years of Policy Innovation*, Harvard Environmental Economics Program, 2012, [https://www.belfercenter.org/sites/default/files/legacy/files/so2-brief\\_digital4\\_final.pdf](https://www.belfercenter.org/sites/default/files/legacy/files/so2-brief_digital4_final.pdf).

<sup>7</sup> See CRS In Focus IF10479, *The Energy Credit: An Investment Tax Credit for Renewable Energy*, by Molly F.

sequestration<sup>8</sup>—but these bills are not discussed in this report. In addition, starting in the 112<sup>th</sup> Congress, some Members have introduced resolutions in the House and Senate expressing the view that a carbon tax is not in the economic interests of the United States. In September 2018, the House passed a resolution “expressing the sense of Congress that a carbon tax would be detrimental to the United States economy” (H.Con.Res. 119).<sup>9</sup> An analogous resolution was not introduced in the Senate in the 115<sup>th</sup> Congress.

As **Figure 2** illustrates, between the 108<sup>th</sup> and 111<sup>th</sup> Congresses, most of the introduced bills would have established cap-and-trade systems. Between the 112<sup>th</sup> and 115<sup>th</sup> Congresses, most of the introduced bills would have established carbon tax or emissions fee programs.

In the 111<sup>th</sup> Congress, Members offered multiple and varied proposals,<sup>10</sup> ultimately resulting in the House passage of H.R. 2454, an economy-wide cap-and-trade bill.<sup>11</sup> A companion bill in the Senate (S. 1733) was ordered reported from the Committee on Environment and Public Works, but the bill was never brought to the Senate floor for consideration.

In subsequent Congresses, some Members continued to offer GHG emission control legislation, but these proposals saw minimal legislative activity. During that time frame, the U.S. Environmental Protection Agency (EPA) used existing Clean Air Act authorities to promulgate GHG emission standards for key sectors, including the electric power and transportation sectors.<sup>12</sup> EPA rulemakings in this area—particularly the 2015 Clean Power Plan final rule<sup>13</sup> and the 2018 Affordable Clean Energy proposed rule<sup>14</sup>—generated considerable interest and debate in Congress.

The proposals from the 116<sup>th</sup> Congress range in their scope of emissions covered from CO<sub>2</sub> emissions from fossil fuel combustion to multiple GHG emissions from a broader array of sources. In addition, the proposals differ by how, to whom, and for what purpose the fee revenues or allowance value would be applied. Some economic analyses indicate that policy choices to distribute the tax, fee, or emission allowance revenue would yield greater economic impacts than the direct impacts of the carbon price.

---

Sherlock.

<sup>8</sup> See CRS Report R44902, *Carbon Capture and Sequestration (CCS) in the United States*, by Peter Folger.

<sup>9</sup> The House passed an identical resolution in the 114<sup>th</sup> Congress (H.Con.Res. 89).

<sup>10</sup> See CRS Report R40556, *Market-Based Greenhouse Gas Control: Selected Proposals in the 111th Congress*, by Larry Parker, Brent D. Yacobucci, and Jonathan L. Ramseur.

<sup>11</sup> H.R. 2454 (111<sup>th</sup> Congress), which was introduced by Representatives Waxman and Markey, would have covered approximately 85% of the U.S. GHG emissions. Although not complete coverage, this approach is typically described as economy-wide.

<sup>12</sup> For more details, see CRS Report R45393, *EPA’s Affordable Clean Energy Proposal*, by Kate C. Shouse, Jonathan L. Ramseur, and Linda Tsang.

<sup>13</sup> For more details, see CRS Report R44341, *EPA’s Clean Power Plan for Existing Power Plants: Frequently Asked Questions*, by James E. McCarthy et al.

<sup>14</sup> For more details, see CRS Report R45393, *EPA’s Affordable Clean Energy Proposal*, by Kate C. Shouse, Jonathan L. Ramseur, and Linda Tsang.

**Figure 2. Number and Type of Market-Based GHG Emission Reduction Bills Introduced in 108<sup>th</sup> Congress Through 116<sup>th</sup> Congress**

**Source:** Prepared by CRS.

**Notes:** “Other Approaches” include (1) proposals that did not specify the overall framework but would have provided EPA with the authority to establish a GHG emission reduction program and (2) proposals that combine elements from a cap-and-trade system with price control features in a carbon tax or emissions fee system, sometimes describes as hybrid approaches.

The first section of this report provides background information on cap-and-trade and carbon tax or emission fee programs. The second section compares the GHG emission reduction legislation in each Congress (108<sup>th</sup>-116<sup>th</sup>).

## Background

Over the last 15 years, broad GHG emission reduction legislation has generally involved market-based approaches—such as cap-and-trade systems or carbon tax programs—that rely on private sector choices and market forces to minimize the costs of emission reductions and spur innovation.<sup>15</sup> Both carbon tax and emissions cap-and-trade programs would place a price—directly or indirectly—on GHG emissions or their inputs (e.g., fossil fuels), both would increase the price of fossil fuels for the consumer, and both would reduce GHG emissions to some degree. Preference between the two approaches ultimately depends on which variable policymakers prefer to precisely control: emission levels or emission prices. As a practical matter, these market-based policies may include complementary or hybrid designs, incorporating elements to increase certainty in price or emissions quantity. For example, legislation could provide mechanisms for adjusting a carbon tax/fee if a targeted range of emissions reductions were not achieved in a given period. Alternatively, legislation could include mechanisms that would bound the range of market prices for a cap-and-trade system’s emissions allowances to improve price certainty.

<sup>15</sup> In some instances, legislation would have directed EPA to establish a GHG emissions reduction program with a market-based approach as one option. An alternative approach to a market-based system might involve regulatory directives that require emission performance standards for specific sources or the application of best available control technology.

## What Is a GHG Emissions Cap-and-Trade System?

A GHG cap-and-trade system creates an overall limit, or cap, on GHG emissions from certain sources. Cap-and-trade programs can vary by the sources covered, which often include major emitting sectors (e.g., power plants and carbon-intensive industries), fuel producers and/or processors (e.g., coal mines or petroleum refineries), or some combination of both.

The emissions cap is partitioned into *emission allowances*. Typically, in a GHG cap-and-trade system, one emission allowance represents the authority to emit one metric ton<sup>16</sup> of carbon dioxide-equivalent (mtCO<sub>2</sub>e).<sup>17</sup> The emissions cap creates a new commodity—the emission allowance. Policymakers may decide to distribute the emission allowances to covered entities at no cost (based on, for example, previous years' emissions), sell the allowances (e.g., through an auction), or use some combination of these strategies. The distribution of emission allowances is typically a source of significant debate during a cap-and-trade program's development, because the allowances have monetary value.

At the end of each established compliance period (e.g., a calendar year or multiple years), covered sources submit emission allowances to an implementing agency to cover the number of tons emitted. If a source did not provide enough allowances to cover its emissions, the source would be subject to penalties. Covered sources would have a financial incentive to make reductions beyond what is required, because they could (1) sell or trade unused emission allowances to entities that face higher costs to reduce their facility emissions, (2) reduce the number of emission allowance they need to purchase, or (3) bank them, if allowed, to use in a future year.

The use of emission offsets as a compliance option received attention during debate over cap-and-trade programs. An offset is a measurable reduction, avoidance, or sequestration of GHG emissions from a source not covered by an emission reduction program. Economic analyses of cap-and-trade proposals concluded that offset treatment (i.e., whether or not to allow their use and, if so, to what degree) would have a substantial impact on overall program cost. This is because some emissions and sources often not covered in cap-and-trade programs can reduce emissions at a lower cost per ton than many typically covered sources. However, the use of offsets generates considerable controversy, primarily over the concern that difficult-to-assess or fraudulent offsets could create uncertainty about the quantity of emission reductions.<sup>18</sup>

In addition, other mechanisms—such as allowance banking or borrowing—may be included to increase the flexibility of the program and, generally, reduce the costs.

---

<sup>16</sup> A metric ton is approximately 2,205 pounds. A short ton equals 2,000 pounds.

<sup>17</sup> This term of measure (CO<sub>2</sub>e) is used because GHGs vary by global warming potential (GWP). GWP is an index developed by the Intergovernmental Panel on Climate Change (IPCC) that allows comparisons of the heat-trapping ability of different gases over a period of time, typically 100 years. Consistent with international GHG reporting requirements, EPA's most recent GHG inventory (2018) uses the GWP values presented in the IPCC's 2007 Fourth Assessment Report. For example, based on these GWP values, a ton of methane is 25 times more potent than a ton of CO<sub>2</sub> when averaged over a 100-year time frame. The IPCC has since updated the 100-year GWP estimates, with some increasing and some decreasing. For example, the IPCC 2013 Fifth Assessment Report reported the 100-year GWP for methane as ranging from 28 to 36. EPA compares the 100-year GWP values in Table 1-3 of its 2018 GHG Inventory.

<sup>18</sup> Both the RGGI and California cap-and-trade systems allow offsets as a compliance option (see footnote 4).

## What Is a Carbon Tax or Emissions Fee?

In a carbon tax or emissions fee program, policymakers attach a price to GHG emissions or the inputs that create them. A carbon tax/fee on emissions or emissions inputs—namely fossil fuels—would increase the relative price of the more carbon-intensive energy sources. This result is expected to spur innovation in less carbon-intensive technologies and stimulate other behavior that may decrease emissions.<sup>19</sup>

Economic modeling indicates that a carbon tax/fee approach could achieve emission reductions, the level of which would depend on the scope and stringency (i.e., tax or fee level) of the program.<sup>20</sup> For example, to address emissions from fossil fuel combustion—76% of total U.S. GHG emissions<sup>21</sup>—policymakers could apply a tax/fee to fossil fuels at approximately 3,000 entities, including coal mines, petroleum refineries, and entities required to report natural gas deliveries.

A carbon tax/fee would generate a new revenue stream. The magnitude of the revenues would depend on the scope and rate of the tax or fee, the responsiveness of covered entities in reducing their potential emissions, and multiple other market factors. A 2016 Congressional Budget Office study estimated that a \$25/ton carbon tax would yield approximately \$100 billion in the first year of the program.<sup>22</sup>

When designing a carbon tax/fee system, one of the more controversial and challenging questions for policymakers is how, to whom, and for what purpose the new tax or fee revenues could be applied. Congress would face the same issues that would be encountered during a debate over emission allowance value distribution in a cap-and-trade system.

When deciding how to allocate the revenues, policymakers would encounter trade-offs among objectives. The central trade-offs involve minimizing economy-wide costs, lessening the costs borne by specific groups—particularly low-income households and displaced workers or communities—and supporting a range of specific policy objectives.

A primary argument against a carbon tax/fee system (and a cap-and-trade program) is the concern about the economy-wide costs that a carbon price could impose. The potential costs would depend on a number of factors, including the magnitude, design, and use of revenues of the carbon tax or fee.

Others who may oppose a carbon tax system express opposition to federal taxes in general or the possibility that the revenues would enable greater federal spending. Owners of coal resources, in particular, would likely lose asset values under a carbon tax system—as under a cap-and-trade system—to the degree that coal becomes less competitive under the costs of emission reductions.

---

<sup>19</sup> This differs from a price system that applies to energy content, such as a tax based on British thermal units (Btu). In 1993, President Clinton proposed a deficit reduction package that included a tax based on energy content, measured in Btu. The goals of the 1993 Btu tax proposal were to promote energy conservation and raise revenue. At the time, the proposed tax would have generated a new revenue stream of about \$30 billion per year. The proposal was met with strong opposition and was not enacted; Congress ultimately enacted an approximately five-cent-per-gallon increase in the motor fuels taxes.

<sup>20</sup> See, for example, Alexander R. Barron et al., “Policy Insights from the EMF 32 Study on U.S. Carbon Tax Scenarios,” *Climate Change Economics*, vol. 9, no. 1 (2018).

<sup>21</sup> EPA, *Inventory of U.S. Greenhouse Gas Emissions and Sinks, 1990-2016*, April 2018.

<sup>22</sup> Congressional Budget Office, *Options for Reducing the Deficit: 2017-2026*, 2016.

## GHG Emission Reduction Legislation by Congress

This section compares GHG emission reduction legislation from the 108<sup>th</sup> Congress to the 116<sup>th</sup> Congress by including a separate legislative table for each Congress.<sup>23</sup> The tables compare the bills by their overall framework, scope, stringency, and selected design elements. Categories of comparison include

- **General framework:** the proposed program structure—emissions cap, emissions tax or fee, or some combination of both—and scope in terms of emissions covered (multiple GHG emissions or just CO<sub>2</sub> emissions).
- **Covered entities/materials:** the industries, sectors, or materials that would be subject to the program.
- **Emissions limit or target:** the GHG or CO<sub>2</sub> emissions target or cap for a particular year. Some targets/caps would apply only to covered sources; others apply to total U.S. GHG emissions.
- **Distribution of allowance value or tax revenue:** how emission allowance value or carbon tax or fee revenue would be distributed (if applicable).
- **Offset and international allowance treatment:** the degree to which offsets and international allowances could be used for compliance purposes and the types of offset activities that would qualify. Some proposals limit offsets by percentage of required reductions; others limit offsets as a percentage of allowance submissions.
- **Mechanism to address carbon-intensive imports:** a central concern with a U.S. GHG reduction program is that it could raise U.S. prices more than goods manufactured abroad, potentially creating a competitive disadvantage for some domestic businesses, particularly carbon-intensive, trade-exposed industries. Policymakers could address these potential impacts in several ways—for example, through border adjustments, tax rebates, or emission allowances provided at no cost to selected industrial sectors.
- **Additional GHG reduction measures:** other mechanisms that are designed to further reduce GHG emissions that are not covered in the central program.

---

<sup>23</sup> One GHG emission reduction bill was introduced in the 107<sup>th</sup> Congress. Senator Jeffords introduced S. 556, which would have amended the Clean Air Act to reduce CO<sub>2</sub> emissions from electric power plants to below 1990 levels.

Ordered Chronologically by Introduced Date

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
S. 280 Lieberman Jan. 12, 2007	Cap-and-trade system for GHG emissions from multiple sectors	Electric power, industrial, or commercial entities that emit over 10,000	1990 GHG levels for covered sources by	Determined by EPA	Up to 15% of submitted allowances can come from	No specific provision	No specific provision

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
		mtCO <sub>2</sub> e annually; any refiner or importer of petroleum products for transportation use that, when combusted, will emit over 10,000 mtCO <sub>2</sub> e annually; and any importer or producer of HFC, PFC, and SF <sub>6</sub> that, when used, will emit over 10,000 mtCO <sub>2</sub> e	2020, reduced by the level of emissions from non-covered sources		domestic or international offsets; if offsets account for 15% of allowances, at least 1.5% must come from agricultural sequestration		
S. 309 Sanders Jan. 16, 2007	Determined by EPA, but must be a market-based program for GHG emissions	Determined by EPA through a rulemaking process	1990 GHG levels for all sources by 2020	Determined by EPA	No specific provision	No specific provision	GHG emission standards for vehicles, new electric power plants, and an energy efficiency performance standard
S. 317 Feinstein Jan. 17, 2007	Cap-and-trade system for GHG emissions from electricity sector	Fossil-fuel-fired electric generating facilities with a capacity of greater than 25 megawatts	5% below 2001 GHG levels for electric generators by 2020	Initially provided to covered entities at no cost; percentage of allowances sold via auction gradually increases: by 2036, 100% sold via auction; activities funded by auction revenues include technology	Up to 25% of required reductions may be achieved with EPA-approved international credits	No specific provision	No specific provision

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
				development and energy efficiency			
H.R. 620 Olver Jan. 22, 2007	Cap-and-trade system for GHG emissions from multiple sectors	Electric power, industrial, or commercial entities that emit over 10,000 mtCO <sub>2</sub> e annually; any refiner or importer of petroleum products for transportation use that, when combusted, will emit over 10,000 mtCO <sub>2</sub> e annually; and any importer or producer of HFCs, PFCs, or SF <sub>6</sub> that, when used, will emit over 10,000 mtCO <sub>2</sub> e	1990 GHG levels for covered sources by 2020, reduced by the level of emissions from non-covered sources	Determined by EPA	Up to 15% of allowance submission can come from domestic and/or international offsets	No specific provision	No specific provision
S. 485 Kerry Feb. 1, 2007	Cap-and-trade system for GHG emissions	Determined by EPA through a rulemaking process	1990 GHG levels for covered sources by 2020	Determined by the President; Congress may enact alternative plan within one year	No specific provision	No specific provision	No specific provision
H.R. 1590 Waxman Mar. 20, 2007	Cap-and-trade system for GHG emissions	Determined by EPA through a rulemaking process	1990 GHG levels for all sources by 2020	Determined by the President; Congress may enact alternative plan within one year	No specific provision	No specific provision	GHG emission standards for vehicles, energy efficiency standards, renewable portfolio standards

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
H.R. 2069 Stark Apr. 26, 2007	Tax starting at \$10/short ton of carbon content in taxable fuels, which equates to approximately \$2.70/tCO <sub>2</sub> emissions  The rate increases \$10 per year (in nominal dollars)	Manufacturers, producers, or importers who sell a taxable fuel, which includes coal, petroleum and petroleum products, and natural gas	Tax rate freeze if CO <sub>2</sub> emissions do not exceed 20% of U.S. 1990 CO <sub>2</sub> emissions by 2020	No specific provision	NA	No specific provision	No specific provision
S. 1766 Bingaman July 11, 2007	Cap-and-trade system for GHG emissions from multiple sectors with allowance price ceiling: in 2012, \$12/ton, increasing by 5% annually plus inflation	Petroleum refineries, natural gas processing plants, and imports of petroleum products, coke, or natural gas; entities that consume more than 5,000 tons of coal a year; importers of HFCs, PFC, SF <sub>6</sub> , N <sub>2</sub> O, or products containing such compounds, and adipic acid and nitric acid plants, aluminum smelters, and facilities that emit HFCs as a byproduct of HCFC production	1990 GHG levels for covered sources by 2020	In 2012, 53% of allowances allocated to covered and certain industrial entities 23% allocated to states and for sequestration and early reduction activities 24% are auctioned to fund low-income assistance, carbon capture and storage, and adaptation activities The percentage auctioned increases	Unlimited use of domestic offsets; international offsets limited to 10% of a regulated entity's emissions target	International reserve allowances must accompany imports of any covered GHG intensive goods and primary products to the United States  Least developed nations or those that contribute no more than 0.5% of global emissions are excluded	No specific provision

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
				steadily, reaching 53% by 2030			
H.R. 3416 Larson Aug. 3, 2007	Tax on CO <sub>2</sub> content on fossil fuels, starting at \$15/short ton CO <sub>2</sub> emissions, increasing by 10% annually plus inflation	Manufacturers, producers, or importers of coal, petroleum, and natural gas	No specific provision	In first year (2008), approximately 76% would support a payroll tax rebate 16% would fund clean energy technology 8% would support affected industry transition assistance (declining to zero by 2017)	Allows for domestic offset projects (as prescribed by the Secretary of the Treasury) to be submitted as tax credits or tax refunds	No specific provision other than direct assistance to affected industries (determined by the Secretaries of the Treasury and Labor)	No specific provision
H.R. 4226 Gilchrest Nov. 15, 2007	Cap-and-trade system for GHG emissions from multiple sectors A Carbon Market Efficiency Board may implement cost-relief measures	Electric power, industrial, or commercial entities that emit over 10,000 mtCO <sub>2</sub> e annually; refiners or importers of petroleum products for transportation use that, when combusted, will emit over 10,000 mtCO <sub>2</sub> e annually; and importers or producers of HFCs, PFCs, or SF <sub>6</sub> that, when used, will emit over 10,000 mtCO <sub>2</sub> e	85% of 2006 GHG levels from covered sources, reduced by the level of emissions from non-covered sources by 2020	Determined by EPA	Up to 15% of allowance submission can come from domestic and/or international offsets	The President may establish a program to require importers to pay the value of GHGs emitted during the production of goods or services imported into the United States from countries that have no comparable	No specific provision

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
						emission restrictions to those of the United States	
<p>S. 2191 Lieberman Oct. 18, 2007 <i>Ordered reported by the Senate Committee on Environment and Public Works on Dec. 5, 2007</i></p>	<p>Cap-and-trade system for GHG emissions from multiple sectors</p>	<p>Producers or importers of petroleum or coal-based liquid or gaseous fuel that emits GHGs, or facilities that produce or import more than 10,000 mtCO<sub>2e</sub> of GHG chemicals annually; facilities that use more than 5,000 tons of coal annually; natural gas processing plants or importers (including liquid natural gas [LNG]); or facilities that emit more than 10,000 mtCO<sub>2e</sub> of HFCs annually as a byproduct of HFC production</p>	<p>Emission cap for covered sources in 2020 is 4.924 billion tCO<sub>2e</sub> (19% below 2005 levels for covered sources)</p>	<p>In 2012: 40% of allowances allocated to covered electric utilities, industrial facilities, and coops 9% allocated to states for conservation, extra reductions, and other activities 11.5% for various sequestration activities 10% allocated for electricity consumer assistance 5% for early reductions 0.5% for tribal governments 18% (plus an early auction of 6%) auctioned to fund technology deployment, carbon capture and storage,</p>	<p>Up to 15% of allowance requirement may be achieved through domestic offsets; international offsets can satisfy an additional 15%</p>	<p>International reserve allowances must accompany imports of any covered GHG-intensive goods and primary products to the United States  Least developed nations or those that contribute no more than 0.5% of global emissions are excluded</p>	<p>Low carbon fuel standard for transportation fuels</p>

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
				low-income and rural assistance, and adaptation activities			
<p>S. 3036 Boxer May 20, 2008 S.Amdt. 4825 <i>(in the nature of substitute) failed a cloture motion on June 6, 2008</i></p>	<p>Cap-and-trade system for GHG emissions from multiple sectors A Carbon Market Efficiency Board may implement cost-relief measures if necessary</p>	<p>Producers or importers of petroleum- or coal-based liquid or gaseous fuel that emits GHGs, or facilities that produce or import more than 10,000 mtCO<sub>2</sub>e of GHG chemicals annually; facilities that use more than 5,000 tons of coal annually; natural gas processing plants or importers (including LNG); or facilities that emit more than 10,000 mtCO<sub>2</sub>e of HFCs annually as a byproduct of HFC production</p>	<p>Emission cap for covered sources in 2020 is 4.924 billion tCO<sub>2</sub>e (19% below 2005 levels for covered sources)</p>	<p>A share of allowances are auctioned for deficit reduction increasing from 6.1% in 2012 to 15.99% in 2031 and thereafter The “remainder allowances” are distributed in 2012 (adjusted in future years) as follows: 38% of allowances to covered electric utilities, industrial facilities, and co-ops 10.5% to states for conservation, extra reductions, and other activities 7.5% for various sequestration activities 11% allocated for electricity and natural gas consumer assistance</p>	<p>Up to 15% of allowance requirement may be achieved through domestic offsets; international allowances can satisfy an additional 15%</p>	<p>International reserve allowances must accompany imports of any covered GHG-intensive goods and primary products to the United States Least developed nations or those that contribute no more than 0.5% of global emissions are excluded</p>	<p>Low carbon fuel standard for transportation fuels</p>

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
				5% for early reductions 0.5% for tribal governments 1% for methane reduction projects 21.5% (plus an early auction of 5%) auctioned to fund technology deployment, carbon capture and storage, low income and rural assistance, and adaptation activities, as well as program management			
H.R. 6186 Markey June 4, 2008	Cap-and-trade system for GHG emissions from multiple sectors	Electric power or industrial facilities that emit over 10,000 mtCO <sub>2</sub> e; producers or importers of petroleum or coal-based liquid products that, when combusted, will emit over 10,000 mtCO <sub>2</sub> e annually; local distribution companies that deliver natural gas that, when combusted, will emit over 10,000	Emission cap for covered sources in 2020 is 4.983 billion tCO <sub>2</sub> e	Between 2012 and 2019, 6% of allowances would be distributed to manufacturers of “trade-exposed primary goods” Remaining 94% auctioned (100% by 2020), with revenues distributed (in FY2010-FY2019) as follows:	Up to 15% of allowance requirement may be achieved through domestic offsets; international offsets or allowances can satisfy an additional 15%	International reserve allowances must accompany imports of any covered GHG intensive goods and primary products to the United States  Least developed nations or those that contribute no more than	EPA to develop emission performance standards for certain non-covered entities that exceed 10,000 tCO <sub>2</sub> e per year  Low-carbon fuel standard for transportation fuels  Performance standard for certain coal-fired power plants to capture and

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
		tCO <sub>2</sub> e annually; producers or importers of HFCs, PFCs, SF <sub>6</sub> , or NF <sub>3</sub> that, when used, will emit over 10,000 mtCO <sub>2</sub> e; sites at which CO <sub>2</sub> is geologically sequestered on a commercial scale		58.5% to middle- and low-income households as tax credits and/or rebates 12.5% for development and promotion of low-carbon technology 12.5% for energy efficiency programs 4.5% for biological sequestration 1.5% for worker transition assistance 2% for domestic adaptation efforts 1.5% for protection of natural resources 1.5% for international forest protection 3.5% for international clean technology 2% for international adaptation efforts		0.5% of global emissions are excluded	geologically sequester not less than 85% of their CO <sub>2</sub> emissions

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
H.R. 6316 Doggett June 19, 2008	Cap-and-trade system for GHG emissions from multiple sectors  A Carbon Market Efficiency Board may implement cost-relief measures	Producers or importers of petroleum- or coal-based liquid or gaseous fuel that emits GHGs, or facilities that produce or import more than 10,000 mtCO <sub>2e</sub> of GHG chemicals annually; facilities that use more than 5,000 tons of coal annually; natural gas processing plants or importers (including LNG); or, facilities that emit more than 10,000 mtCO <sub>2e</sub> of HFCs annually as a byproduct of HFC production	Emission cap for covered sources in 2020 is 6.087 billion mtCO <sub>2e</sub>	In 2012, 5% of the allowances are allocated to electric generators; 10% are allocated to energy intensive industries  Remaining allowances are auctioned with revenues used for the following: 54% for consumer assistance (66% of which goes towards providing health insurance coverage, the remainder for rebates and tax relief) 15% of revenues for deficit reduction 11.4% for international activities 7.5% for energy efficiency 7% for natural resource adaptation 7% for green energy research	Up to 10% of allowance requirement may be achieved through domestic offsets; international allowances can satisfy an additional 15%	International reserve allowances must accompany imports of any covered GHG-intensive goods and primary products to the United States  Least developed nations or those that contribute no more than 0.5% of global emissions are excluded	EPA to promulgate regulations that address emissions in uncovered sectors

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
				4% for worker assistance 3% for forestry and agricultural activities 2.7% for states and tribes 2% for transportation alternatives 1% for early action 0.4% for education

**Table 4. GHG Emission Reduction Proposals: 111<sup>th</sup> Congress**

Ordered Chronologically by Introduced Date

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
H.R. 594 Stark Jan. 15, 2009	Tax on CO <sub>2</sub> content in fossil fuels, starting at \$10/short ton, increasing by \$10 per year	Manufacturers, producers, or importers who sell a taxable fuel, which includes coal, petroleum and petroleum products, and natural gas	Tax freezes if CO <sub>2</sub> emissions do not exceed 20% of U.S. 1990 CO <sub>2</sub> emissions by 2020	No specific provision	NA	No specific provision	No specific provision
H.R. 1337 Larson Mar. 5, 2009	Tax on CO <sub>2</sub> content in fossil fuels, starting at \$15/short ton, increasing by \$10 each year emissions target is not met	Manufacturers, producers, or importers of coal, petroleum, and natural gas	EPA is to establish (within five years after enactment) annual CO <sub>2</sub> emission targets in order to reach goal of 80% below 2005 CO <sub>2</sub> emissions by 2050	In first year: 76% would support a payroll tax rebate 16% would fund clean energy technology 8% would support affected industry transition assistance (declining to zero by 2017)	Instructs Department of the Treasury (in consultation with Department of Energy) to submit a report of qualified offset projects but does not allow for projects to generate tax credits	Department of the Treasury imposes a carbon equivalency fee on imported carbon-intensive goods, including steel, aluminum, and paper; fee based on emissions associated with production of carbon-intensive goods	No specific provision
H.R. 1666 Doggett Mar. 23, 2009	Cap-and-trade system for GHG emissions, with an oversight board to manage	Not explicitly defined	Target of 4.9 billion mtCO <sub>2</sub> e for covered	Oversight board administers auctions to manage the allowance price path; precise use of	No specific provision	No specific provision	No specific provision

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
	price path between 2012 and 2019		entities by 2020	auction revenues is not specified			
H.R. 1683 McDermott Mar. 24, 2009	Hybrid cap/tax system for GHG emissions: covered persons must purchase an emission permit from the Department of the Treasury when a “GHG emission substance” is produced or enters the United States; permits may not be sold or exchanged; price for emission permits based on achieving annual emission targets	Coal producers, petroleum refineries; producers of other GHG emission substances (including natural gas, among others); importers of GHG emission substances	25% below 2005 GHG emissions by 2020	Establishes trust fund that would receive appropriations equal to revenue received by selling emission permits Precise use of the revenue is not specified	No specific provision	Department of the Treasury imposes a GHG emission permit equivalency fee on imported carbon-intensive goods, including steel, aluminum, and paper	No specific provision
H.R. 1862 Van Hollen Apr. 1, 2009	Cap-and-trade system for CO <sub>2</sub> emissions from multiple sectors	Person who makes the first sale in United States of coal, oil, natural gas, and any fossil-fuel-derived products used as a combustible fuel	25% below 2005 CO <sub>2</sub> emissions by 2020	100% of allowances sold via auction; proceeds used to fund consumer dividend payments; each month, every person with a Social Security number	No specific provision	Department of the Treasury imposes a carbon equivalency fee on imported carbon-intensive goods, including	No specific provision

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
				would receive an equal payment		steel, aluminum, and paper	
H.R. 2380 Inglis May 13, 2009	Tax on fossil fuels, starting at \$15/short ton of CO <sub>2</sub> emissions, and increasing by approximately 6.5% each year, plus cost-of-living adjustments	Manufacturers, producers, or importers of coal, petroleum, and natural gas	No specific provision	Tax revenue used to offset a corresponding reduction in payroll tax rates (employee, employer, and self-employed)	No specific provision	Imposes a tax on “imported taxable products” in relation to fossil fuels used or the CO <sub>2</sub> emissions generated during the product’s manufacturing process	No specific provision
H.R. 2454 Waxman-Markey May 15, 2009 <i>Reported by the Committee on Energy and Commerce on June 5, 2009</i> <i>Passed the House on June 26, 2009</i> For more information, see CRS Report R40643, <i>Greenhouse Gas Legislation: Summary and Analysis of H.R. 2454 as Passed by</i>	Cap-and-trade system for GHG emissions from multiple sectors	Electricity generators, various fuel producers and importers, fluorinated gas producers and importers, geological sequestration sites, various industrial sources, and local distribution companies (LDCs) that deliver natural gas  Covered entity coverage is phased in by category so that all of the above are under the cap in 2016	17% below 2005 emissions from covered sources by 2020	Emission allowance value distributed (as no-cost allowances or auction revenue) in the following manner in 2016:  30% (at minimum) to electricity LDCs; 0.5% for small electric LDCs; 9% to natural gas LDCs; 1.5% to states for home-heating oil consumers  15% directly to low-income consumers  13.4% to energy-intensive, trade-exposed industries;	In 2016, approximately 27% of an entity’s allowance obligation can be satisfied with offsets; this percentage increases to 36% by 2030  Up to half of an entity’s offsets can come from domestic sources and up to half from international sources  Unless otherwise determined by	Energy-intensive, trade-exposed industries to receive allowances at no cost until phased out in mid-2030s; and EPA to promulgate rules establishing an international reserve allowance system for any covered good of an eligible industrial sector	Establishes a separate cap-and-trade program that controls HFC emissions  Directs EPA to establish emission performance standards for select sources not covered by the emissions cap

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
<i>the House of Representatives, coordinated by Mark Holt and Gene Whitney</i>				up to 3.5% to merchant coal units; 2% to petroleum refineries plus 0.25% for small business refineries; up to 1.5% for certain long-term power contract operators 7.1% to states to support renewable energy and energy efficiency efforts 6% to promote technological advances 5% to reduce international deforestation 0.2% for deficit reduction 5% to further other objectives	EPA, covered entities may use unlimited amount of international allowances from “qualifying programs”	from a covered country Exemptions are provided for (1) least developed countries, (2) countries that emit less than 0.5% of global GHG emissions, and (3) countries meeting specific criteria	
S. 1733 Kerry-Boxer Sep. 30, 2009 <i>Reported by the Committee on Environment and Public Works (a</i>	Cap-and-trade system for GHG emissions from multiple sectors	Electricity generators, various fuel producers and importers, fluorinated gas producers and importers, geological sequestration sites, various industrial	20% below 2005 emissions from covered sources by 2020	Emission allowance value is distributed in the following manner in 2016: 25.8% (at minimum) to electricity LDCs;	In 2016, approximately 35% of an entity’s allowance submission can comprise offsets; up to 75% of an entity’s offsets	Trade-exposed, carbon-intensive industries to receive allowances at no cost; in addition, the bill states:	Establishes a separate cap-and-trade program that controls HFCs

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
<p><i>“Manager’s Amendment” in the nature of substitute) on Nov. 5, 2009</i></p>		<p>sources, and LDCs that deliver natural gas Coverage is phased in by category so that all of the above are under the cap in 2016</p>		<p>0.94% for small electric LDCs 7.7% to natural gas LDCs 1.3% to states for home-heating oil consumers 12.9% directly to low-income consumers 12.1% to energy-intensive, trade-exposed industries up to 3.0% to merchant coal units 0.64% to petroleum refineries plus 0.86% for small business refineries and 0.43% for medium refineries up to 1.3% for certain long-term power contract operators 5.97% to states to support renewable energy and energy efficiency efforts</p>	<p>can come from domestic sources and up to 25% from international sources Unless otherwise determined by EPA, unlimited use of international allowances from “qualifying programs”</p>	<p>“It is the sense of the Senate that this Act will contain a trade title that will include a border measure that is consistent with our international obligations and designed to work in conjunction with provisions that allocate allowances to energy-intensive and trade-exposed industries”</p>

						of inputs (i.e., fossil fuels) subject to the fee	
H.R. 4209 Larson Nov. 1, 2017	Tax on fossil fuels based on their carbon content Tax set at \$49/metric ton in 2019, increasing by 2% plus inflation each year A tax refund is provided for emissions that are captured and permanently sequestered	Tax applies to manufacturers, producers, or importers of coal, petroleum, and natural gas Fossil fuels destined for export are exempt from tax; exporters can receive a refund if tax was paid and material subsequently exported	No specific provision	Establishes a trust fund that would receive appropriations equal to tax revenue received in the Treasury; the trust fund would provide annual funding for the following infrastructure programs: \$50 billion (plus the Highway Trust Fund shortfall) for highway and transit; \$5 billion for the Transportation Investments Generating Economic Recovery program; \$3 billion for aviation; \$5 billion for passenger rail; \$6 billion for harbors, waterways, flood protection, and dams; \$6 billion for wastewater and drinking water; and \$3 billion for broadband In addition, the trust fund would provide: \$5 billion annually for worker transition assistance in the fossil fuel industries; 12.5% for an energy refund program that would provide monthly payments to households	No specific provisions	The Secretary of the Treasury shall impose a fee on imports of carbon-intensive goods; the fee will be equivalent to the cost that domestic producers incur due to the carbon tax; this fee expires if the exporting nation implements equivalent measures or if an international agreement requires equivalent measures	No specific provisions

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
				with incomes up to 150% of poverty line; and any remaining revenues would support a consumer tax rebate for households with incomes up to 350% of the poverty line			
S. 2352 Van Hollen Jan. 29, 2018	Cap-and-trade system for CO <sub>2</sub> emissions from fossil fuel combustion Permits sold through quarterly auctions by the Department of the Treasury Auction revenue distributed to individuals, often described as a “cap and dividend” approach A permit reserve and borrowed permits from future years may be used to help stabilize auction prices	Covered materials include crude oil, coal, natural gas, and products derived from these materials used for combustion Covered entities include petroleum refineries and importers, coal mines and importers, and natural gas deliverers (as reported on Energy Information Administration Form 176) and some natural gas processors	2020 limit: permits sold equal to 20% below 2005 2025 limit: permits sold equal to 30% below 2005 U.S. CO <sub>2</sub> emissions 2030 limit: permits sold equal to 40% below 2005 U.S. CO <sub>2</sub> emissions 2040 limit: permits sold equal to 60% below 2005 U.S. CO <sub>2</sub> emissions	Auction revenue distributed via quarterly dividend payments to all persons with a valid Social Security number	No specific provisions	Unless an exporting nation has implemented equivalent measures, imports of carbon-intensive goods will be subject to a fee—determined by the Secretary of the Treasury—that is equivalent to the costs domestic producers of comparable products incur due to the carbon price Exporters of carbon-intensive goods	EPA directed to promulgate regulations to address other GHG emissions that are not covered by the permit program; emissions “directly attributable to the production of animals for food or food products” are excluded

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
						may receive compensation for losses related to the permit system	
H.R. 4889 Beyer Jan. 29, 2018	<p>Cap-and-trade system for CO<sub>2</sub> emissions from fossil fuel combustion</p> <p>Permits sold through quarterly auctions by the Department of the Treasury</p> <p>Auction revenue distributed to individuals, often described as a “cap and dividend” approach</p> <p>A permit reserve and borrowed permits from future years may be used to help stabilize auction prices</p>	<p>Covered materials include crude oil, coal, natural gas, and products derived from these materials used for combustion</p> <p>Covered entities include petroleum refineries and importers, coal mines and importers, and natural gas deliverers (as reported on Energy Information Administration Form 176) and some natural gas processors</p>	<p>2020 target: reduce U.S. CO<sub>2</sub> emissions to 20% below 2005 levels</p> <p>2030 target: 40% below 2005 levels</p>	Auction revenue distributed via quarterly dividend payments to all persons with a valid Social Security number	No specific provisions	<p>Unless an exporting nation has implemented equivalent measures, imports of carbon-intensive goods will be subject to a fee—determined by the Secretary of the Treasury—that is equivalent to the costs domestic producers of comparable products incur due to the carbon price</p> <p>Exporters of carbon-intensive goods may receive</p>	EPA directed to promulgate regulations to address other GHG emissions that are not covered by the permit program; emissions “directly attributable to the production of animals for food or food products” are excluded

The Congressional Research Service (CRS) is a federal legislative branch agency, housed inside the Library of Congress, charged with providing the United States Congress non-partisan advice on issues that may come before Congress.

EveryCRSReport.com republishes CRS reports that are available to all Congressional staff. The reports are not classified, and Members of Congress routinely make individual reports available to the public.

Prior to our republication, we redacted phone numbers and email addresses of analysts who produced the reports. We also added this page to the report. We have not intentionally made any other changes to any report published on EveryCRSReport.com.

CRS reports, as a work of the United States government, are not subject to copyright protection in the United States. Any CRS report may be reproduced and distributed in its entirety without permission from CRS. However, as a CRS report may include copyrighted images or material from a third party, you may need to obtain permission of the copyright holder if you wish to copy or otherwise use copyrighted material.

Information in a CRS report should not be relied upon for purposes other than public understanding of information that has been provided by CRS to members of Congress in connection with CRS' institutional role.

EveryCRSReport.com is not a government website and is not affiliated with CRS. We do not claim copyright on any CRS report we have republished.
