NAFTA and the United States-Mexico-Canada Agreement (USMCA)

The 116th Congress, in both its legislative and oversight capacities, has been active in numerous trade policy issues related to renegotiation of the North American Free Trade Agreement (NAFTA) and its replacement, the United States-Mexico-Canada Agreement (USMCA). In May 2017, the Trump Administration sent a 90-day notification to Congress of its intent to begin talks with Canada and Mexico to renegotiate and modernize NAFTA, as required by the 2015 Trade Promotion Authority (TPA). Negotiations officially began on August 16, 2017, and were concluded on September 30, 2018. The USMCA was signed on November 30, 2018. The agreement was approved by the House of Representatives (H.R. 5430) on December 19, 2019, by a vote of 385-41, and by the Senate (S. 3052) on January 16, 2020, by a vote of 89-10. President Trump signed the USMCA implementing legislation on January 29, 2020 (P.L. 116-113). All three parties must ratify the agreement and have regulations and laws in effect to meet their USMCA commitments before the agreement enters into force.

The first NAFTA negotiations were launched in 1992. Implementing legislation was signed on December 8, 1991 (P.L. 103-182) and NAFTA entered into force on January 1, 1994. It is particularly significant because it was the most comprehensive free trade agreement (FTA) negotiated at the time, contained several groundbreaking provisions, and was the first of a new generation of U.S. FTAs later negotiated. NAFTA established trade liberalization commitments and set new rules and disciplines for future FTAs on issues important to the United States, including intellectual property rights protection, services trade, dispute settlement procedures, investment, labor, and environment. NAFTA's market-opening provisions gradually eliminated nearly all tariff and most nontariff barriers on merchandise trade. At the time of NAFTA negotiations, average applied U.S. duties on imports from Mexico were 2.07%, while U.S. businesses faced average tariffs of 10%, in addition to nontariff and investment barriers, in Mexico. The U.S.-Canada FTA, which had been in effect since 1989, was suspended under NAFTA. NAFTA will stay in effect until USMCA enters into force.

USMCA, comprised of 34 chapters and 12 side letters, retains most of NAFTA's market opening measures and other measures, while making notable changes to auto rules of origin, dispute settlement provisions, government procurement, investment, and intellectual property rights (IPR) protection. It also modernizes provisions in services, labor, and the environment. New trade issues, such as digital trade, state-owned enterprises, anticorruption, and currency misalignment, are also addressed. Key issues for Congress in the debate surrounding USMCA included worker rights protection in Mexico, IPR provisions and access to medicine, the enforceability of labor and environmental provisions, as well the constitutional authority of Congress over international trade and its role in revising, approving, or withdrawing from the agreement. Congress was also active in considering U.S. negotiating objectives and the extent to which USMCA made progress in meeting them, as required under TPA.

At least 30 days prior to USMCA's entry into force, the President must notify Congress that he has determined that the other parties have taken the necessary legal and regulatory measures to comply with their commitments under the agreement. Such measures include laws or regulations regarding rules of origin, tariffs, panel rosters related to dispute resolution, establishing committees such as the one called for in the chapter on small and medium-sized enterprises, and labor law implementation in Mexico, among others. After all parties have the necessary legal and regulatory measures in place to meet their USMCA commitments, the agreement will enter into force "on the first day of the third month following the last notification." The process could take several months or longer. USMCA parties may take as much time as they need to meet their obligations.

Introduction

The 116th Congress, in both its legislative and oversight capacities, has been active in numerous trade policy issues related to renegotiation of the North American Free Trade Agreement (NAFTA) and its replacement, the United States-Mexico-Canada Agreement (USMCA).¹ In May 2017, the Trump Administration sent a 90-day notification to Congress of its intent to begin talks with Canada and Mexico to renegotiate and modernize NAFTA, as required by the 2015 Trade Promotion Authority (TPA).² Talks officially began on August 16, 2017, and concluded on September 30, 2018. On November 30, 2018, the USMCA was signed by President Donald J. Trump, then-President Enrique Peña Nieto of Mexico, and Canadian Prime Minister Justin Trudeau. The Trump Administration submitted the USMCA implementing legislation to Congress on December 13, 2019. On the same day, the USMCA Implementation Act (H.R. 5430) was introduced in the House of Representatives. On December 16, the companion bill was introduced in the Senate (S. 3052). The legislation was passed by the House on December 19, 2019, by a vote of 385-41, and by the Senate on January 16, 2020, by a vote of 89-10. President Trump signed the legislation on January 29, 2020 (P.L. 116-113).

Key issues for Congress in regard to USMCA talks and passage included protection of worker rights, the enforceability of labor and environmental provisions, intellectual property rights and access to medicine, the economic effects of the agreement, as well as the constitutional authority of Congress over international trade and its role in revising, approving, or withdrawing from the agreement. Also of interest to Congress were U.S. negotiating objectives and the extent to which the proposed agreement made progress in meeting them, as required under TPA.

USMCA revises key NAFTA provisions such as auto rules of origin, which, some argue, roll back longstanding U.S. FTA provisions. On the other hand, it establishes new updated provisions in areas such as digital trade and intellectual property rights.

While the USTR's negotiating objectives included many goals consistent with TPA, USTR also sought, for the first time in U.S. trade negotiations, to reduce the U.S. trade deficit with NAFTA countries, among other specific objectives. U.S. objectives appeared to seek to "rebalance the benefits" of the agreement, echoing President Trump's statements that NAFTA has been a "disaster" and the "worst agreement ever

Joint Statement on Reaching Agreement on USMCA

"Today, Canada and the United States reached an agreement, alongside Mexico, on a new, modernized trade agreement for the 21st Century: the United States-Mexico-Canada Agreement (USMCA). USMCA will give our workers, farmers, ranchers and businesses a high-standard trade agreement that will result in freer markets, fairer trade and robust economic growth in our region. It will strengthen the middle class, and create good, well-paying jobs and new opportunities for the nearly half billion people who call North America home.

"We look forward to further deepening our close economic ties when this new agreement enters into force.

"We would like to thank Mexican Economy Secretary Ildefonso Guajardo for his close collaboration over the past 13 months."

Joint Statement from United States Trade Representative Robert Lighthizer and Canadian Foreign Affairs Minister Chrystia Freeland, September 30, 2018.

negotiated.”³ Some U.S. negotiating positions could be seen to have the explicit or implicit goal of promoting U.S. economic sovereignty and/or rolling back previous liberalization commitments in specific areas, such as periodically reviewing and potentially sunseting the agreement, questioning the validity of binational dispute settlement, enhancing government procurement restrictions, and increasing U.S. and North American content in the auto rules of origin.⁴ Trump Administration officials also spoke of unraveling the North American and global supply chains as a way of attempting to divert trade and investment from Canada and Mexico to the United States.⁵ Mexican and Canadian negotiators viewed such proposals as counterproductive to the spirit and mutual economic benefits of NAFTA and repeated their positions to modernize NAFTA with provisions such as those in the proposed Trans-Pacific Partnership (TPP). The differences between views on modernizing the agreement and U.S. proposals led to perceived tensions in the negotiations.

USMCA has been viewed by many as an opportunity to incorporate elements of more recent FTAs that have entered into force or were negotiated, such as the U.S.-Korea FTA (KORUS) and the proposed TPP. The U.S. and global economies have changed significantly since NAFTA entered into force 25 years ago, especially due to technology advances. The widespread use of the commercial internet, for example, dramatically affected consumer habits and commercial activities, such as e-commerce and supply chain management. Negotiators also sought updated provisions in other areas, including intellectual property rights (IPR), labor, and the environment. The increased role of state-led or supported firms in trade competition with private sector firms was also a new issue of debate and focus of new rules-setting.

This report provides a brief overview of NAFTA and the role of Congress in the renegotiation process, and discusses key provisions in USMCA, as well as issues related to the negotiations. It also provides a discussion of policy implications for Congress. It does not examine existing NAFTA provisions and economic relations in depth. For more information on these issues, please see CRS Report R42965, *The North American Free Trade Agreement (NAFTA)*, by M. Angeles Villarreal and Ian F. Fergusson.

NAFTA Overview

NAFTA negotiations were first launched under President George H. W. Bush. President William J. Clinton signed into law the NAFTA Implementation Act on December 8, 1993 (P.L. 103-182). NAFTA entered into force on January 1, 1994. It is significant because it was the first FTA among two wealthy countries and a lower-income country and because it established trade liberalization commitments that led the way in setting new rules for future trade agreements on issues important to the United States. These include provisions on intellectual property rights (IPR) protection, services trade, agriculture, dispute settlement procedures, investment, labor, and the environment. NAFTA addressed policy issues that were new to FTAs and was influential in concluding major multilateral trade negotiations under the General Agreement on Tariffs and Trade (GATT) and its

successor, the World Trade Organization (WTO). The United States now has 14 FTAs with 20 countries.

NAFTA's market-opening provisions gradually eliminated nearly all tariff and most nontariff barriers on goods and services produced and traded within North America. At the start of NAFTA, average applied U.S. duties on imports from Mexico were 2.07% and over 50% of U.S. imports from Mexico entered duty free.⁶ In contrast, the United States faced higher tariff, nontariff, and investment barriers in Mexico.⁷ Trade among NAFTA partners has more than tripled since the agreement entered into force, forming integrated production chains among all three countries. Many trade policy experts and economists give credit to NAFTA for expanding trade and economic linkages among the parties, creating more efficient production processes, increasing the availability of lower-priced and greater choice of consumer goods, and improving living standards and working conditions.⁸ Others blame NAFTA and subsequent U.S. FTAs for disappointing employment trends, a decline in average U.S. wages, and for not having done enough to improve labor standards and environmental conditions abroad.⁹

Another important element of NAFTA is that it helped "lock in" trade and investment liberalization efforts taking place at the time, especially in Mexico. NAFTA was instrumental in developing closer U.S. relations with both Mexico and Canada and it may have accelerated ongoing trade and investment trends. At the time that NAFTA was implemented, the U.S.-Canada Free Trade Agreement (CUSFTA) was already in effect and U.S. tariffs on most Mexican goods were low, while Mexico had the highest level of trade barriers among the three countries. From the 1930s through part of the 1980s, Mexico maintained a strong protectionist trade policy in an effort to be independent of any foreign power and as a means to promote domestic-led industrialization.¹⁰ In 1991, for example, U.S. businesses were very restricted in investing in Mexico. Under Mexico's restrictive *Law to Promote Mexican Investment and Regulate Foreign Investment*, about a third of Mexican economic activity was not open to majority foreign ownership.¹¹ Mexico's failed protectionist policies did not result in increased income levels or economic growth, and the income disparity with the United States remains large, even after NAFTA (see **Table 1**).

NAFTA coincided with Mexico's unilateral trade liberalization efforts. After NAFTA, the United States and Canada gained greater access to the Mexican market, which was the fastest-growing major export market for U.S. goods and services at the time.¹² NAFTA also opened up the U.S. market to increased imports from Mexico and Canada, creating one of the largest free trade areas

⁶ Executive Office of the President, *Study on the Operation and Effects of the North American Free Trade Agreement*, July 1997, pp. 6-7.

⁷ Most of the market-opening measures resulting from NAFTA were between the United States and Mexico, and Canada and Mexico, because the United States and Canada had a free trade agreement at the time that had been in effect since 1989.

⁸ For example, see Gary Clyde Hufbauer, Cathleen Cimino, and Tyler Moran, *NAFTA at 20: Misleading Charges and Positive Achievements*, Peterson Institute for International Economics, Number PB14-13, May 2014; and U.S. Chamber of Commerce, *NAFTA Triumphant: Assessing Two Decades of Gains in Trade, Growth, and Jobs*, October 2015.

⁹ For example, see AFL-CIO, *NAFTA at 20*, March 2014; and Robert E. Scott, Carlos Salas, Bruce Campbell et al., *Revisiting NAFTA: Still Not Working for North America's Workers*, Economic Policy Institute, Briefing Paper #173, September 28, 2006.

¹⁰ For more information on Mexico's trade policies, see CRS Report R40784, *Mexico's Free Trade Agreements*, by M. Angeles Villarreal.

in the world. Since NAFTA, the three countries have made efforts to cooperate on issues of mutual interest, including trade and investment, and also in other, broader aspects of the relationship, such as regulatory cooperation, industrial competitiveness, trade facilitation, border environmental cooperation, and security.

Table I. Selected Economic Indicators for Mexico, Canada, and the United States
(1994 and 2018)

	Mexico		Canada		United States	
	1994	2018	1994	2018	1994	2018

Source: Compiled by CRS based on data from Economist Intelligence unit (EIU) online database.

- a. Nominal GDP is calculated by EIU based on figures from World Bank and World Development Indicators.
- b. PPP refers to purchasing power parity, which reflects the purchasing power of foreign currencies in U.S. dollars.

Key NAFTA Provisions

Some key NAFTA provisions include tariff and nontariff trade liberalization, rules of origin, commitments on services trade and foreign investment, IPR protection, government procurement rules, and dispute resolution. Labor and environmental provisions are included in separate NAFTA side agreements. NAFTA provisions and rules governing trade were groundbreaking in a number of areas, particularly in regard to enforceable rules and disciplines that were included in a trade agreement for the first time. There were almost no FTAs in place worldwide at the time, and NAFTA influenced subsequent agreements negotiated by the United States and other countries, especially at the multilateral level in light of the then-pending Uruguay Round of major multilateral trade liberalization negotiations.

Key provisions included

- Elimination of nearly all tariffs and most nontariff barriers on goods produced within North America.
- Removal of Mexico’s restrictive tariffs, quotas, and import licenses on products from the United States and Canada.¹³

¹³ Mexico’s average tariff on all imports from the United States in 1993 was 10%, compared to the U.S. tariff of 2.07%.

- Investment provisions which helped “lock in” Mexico’s liberalization of its investment laws and ensure basic protections for U.S. and Canadian investors in Mexico.¹⁴

The market opening that occurred after NAFTA is likely a factor in the significance of trade for Mexico’s economy. In 1994, Mexico’s exports and imports equaled 14% and 18%, respectively, of GDP, while in 2018, these percentages increased to 39% and 41%. For the United States, trade is less significant for the economy, with the value of imports and exports equaling 12% and 15%, respectively, of GDP in 2018 (see **Table 1**).

NAFTA rules, disciplines and nontariff provisions included the following:

- **Agriculture.** NAFTA eliminated tariffs and tariff-rate quotas (TRQs) on most agricultural products. It maintained TRQs with high over-quota tariffs for U.S. exports of dairy, poultry, and egg products to Canada. NAFTA addressed sanitary and phytosanitary (SPS) measures and other types of agricultural non-tariff barriers. SPS regulations are often regarded by agricultural exporters as one of the greatest challenges in trade, often resulting in increased costs and product loss and disrupting integrated supply chains.¹⁵
- **Investment.** NAFTA removed significant investment barriers in Mexico, ensured basic protections for NAFTA investors, and provided a mechanism for the settlement of disputes between investors and a NAFTA country. NAFTA provided for national and “nondiscriminatory treatment” for foreign investment by NAFTA parties in certain sectors of other NAFTA countries. The agreement included country-specific liberalization commitments and exceptions to national treatment. Exemptions from NAFTA included the energy sector in Mexico, in which the Mexican government reserved the right to prohibit private investment or foreign participation.
- **Services Trade.** NAFTA services provisions established a set of basic rules and obligations in services trade among partner countries. The agreement granted services providers certain rights concerning nondiscriminatory treatment, cross-border sales and entry, investment, and access to information. However, there were certain exclusions and reservations by each country. These included maritime shipping (United States), film and publishing (Canada), and oil and gas drilling (Mexico).¹⁶ NAFTA liberalized certain service sectors in Mexico, particularly financial services, which significantly opened its banking sector.¹⁷
- **Financial and Telecommunications Services.** Under NAFTA, Canada extended an exemption granted to the United States, under the CUSFTA, to Mexico in which Mexican banks would not be subject to Canadian investment restrictions. In turn, Mexico agreed to permit financial firms from another NAFTA country to establish financial institutions in Mexico, subject to certain market-share limits applied during a transition period ending by the year 2000. In

¹⁴ Prior to NAFTA U.S. businesses were very restricted in investing in Mexico under Mexico’s former restrictive *Law to Promote Mexican Investment and Regulate Foreign Investment*.

¹⁶ United States General Accounting Office (GAO, now called Government Accountability Office), “North American Free Trade Agreement: Assessment of Major Issues, Volume 2,” *Report to the Congress*, September 1993, pp. 35-36.

¹⁷ Hufbauer and Schott, *NAFTA Revisited*, pp. 28.

- telecommunications, NAFTA partners agreed to exclude provision of, but not the use of, basic telecommunications services. NAFTA granted a “bill of rights” for the providers and users of telecommunications services, including access to public telecommunications services; connection to private lines that reflect economic costs and available on a flat-rate pricing basis; and the right to choose, purchase, or lease terminal equipment best suited to their needs.¹⁸ NAFTA did not require parties to authorize a person of another NAFTA country to provide or operate telecommunications transport networks or services. Nor did it bar a party from maintaining a monopoly provider of public networks or services.¹⁹
- **Intellectual Property Rights (IPR) Protection.** NAFTA was the first U.S. FTA to include IPR protection provisions. It built upon the then-ongoing Uruguay Round negotiations that would create the Trade Related Aspects of Intellectual Property Rights (TRIPS) agreement in the WTO and on various existing international intellectual property treaties. The agreement set specific enforceable commitments by NAFTA parties regarding the protection of copyrights, patents, trademarks, and trade secrets, among other provisions.
 - **Dispute Resolution.** NAFTA’s provisions for preventing and settling disputes regarding enforcement of commitments under the agreement were built upon provisions in the CUSFTA. NAFTA created a system of arbitration for resolving disputes that included initial consultations, taking the issue to the NAFTA Trade Commission, or going through arbitral panel proceedings.²⁰ NAFTA included separate dispute settlement provisions for addressing disputes related to investment and over antidumping and countervailing duty determinations.
 - **Government Procurement.** NAFTA opened up a significant portion of federal government procurement in each country on a nondiscriminatory basis to suppliers from other NAFTA countries for goods and services. It contained some limitations for procurement by state-owned enterprises.
 - **Labor and Environment.** NAFTA marked the first time that labor and environmental provisions were associated with an FTA. Some stakeholders viewed it as an opportunity for establishing a new type of relationship among NAFTA partners.²¹ Labor and environmental provisions, which were in separate side agreements, included language to promote cooperation on labor and environmental matters as well as provisions to address a party’s failure to enforce its own labor and environmental laws. Perhaps most notable, at the time, were the side agreements’ dispute settlement processes that, as a last resort, could impose monetary assessments and sanctions to address a party’s failure to enforce its laws.

¹⁹ Office of the United States Trade Representative (USTR), *Description of the Proposed North American Free Trade Agreement*, August 12, 1992, p. 29.

²⁰ If the parties are unable to resolve the issue through consultations, they may take the dispute to the NAFTA Trade Commission, which is composed of Ministers or cabinet-level officers designated by each country. A party may also request the establishment of an arbitral panel, which may make recommendations for the resolution of the dispute.

²¹ Woodrow Wilson International Center for Scholars, *NAFTA at 10: Progress, Potential, and Precedents*, pp. 20-30.

Trade Trends

U.S. trade with NAFTA partners increased rapidly after the agreement took effect, increasing more rapidly than trade with most other countries. U.S. total merchandise imports from NAFTA partners increased from \$150.9 billion in 1993 to \$677.9 billion in 2019 (349%), while merchandise exports increased from \$141.8 billion to \$548.8 billion (287%) during the same time period (see **Figure 1**). The U.S. trade deficit with Canada and Mexico has fluctuated since NAFTA’s entry into force given the other economic factors, such as economic growth and exchange rates, which affect trade. In 2019, the U.S. trade deficit increased to \$129.1 billion, up from \$74.3 billion in 2016. Services trade with NAFTA partners has also increased. The United States had a services trade surplus with Canada and Mexico of \$36.2 billion in 2018 (see **Figure 2**).

Figure 1. U.S. Merchandise Trade with NAFTA Partners: 1993-2019
(billions of nominal dollars)

Source: Compiled by CRS using trade data from the U.S. International Trade Commission’s Interactive Tariff and Trade Data Web, at <http://dataweb.usitc.gov>.

Figure 2. U.S. Services and Merchandise Trade Balance with NAFTA Partners
(billions of nominal dollars)

Source: Compiled by CRS using trade data from the U.S. Bureau of Economic Analysis at <http://www.bea.gov> and the U.S. International Trade Commission's (USITC's) Interactive Tariff and Trade Data Web, at <http://dataweb.usitc.gov>.

Note: Latest available services trade data was for 2018 at the time this report was updated.

Trade in Oil and Gas

Trade in oil and gas, a key component of trilateral trade, affects the overall trade balance with Canada and Mexico. Numerous policymakers associate the U.S. trade deficit with NAFTA partners with merchandise trade and jobs. When the value of trade in oil and gas is taken out of the equation, the trade deficit has been much lower and, in some years, has been a surplus, as shown in **Figure 3**. The value of U.S. oil and gas exports to Canada and Mexico increased from \$0.9 billion in 1997 to \$18.7 billion in 2019, while imports increased from \$22.3 billion to \$82.4 billion. If oil and gas products are excluded from the trade balance, the U.S. merchandise trade deficit with Canada and Mexico was \$65.3 billion in 2019, compared to a total U.S. trade deficit of \$129.1 billion in the same year.

Figure 3. U.S. Merchandise and Oil and Gas Trade with NAFTA Partners
(1997-2019)

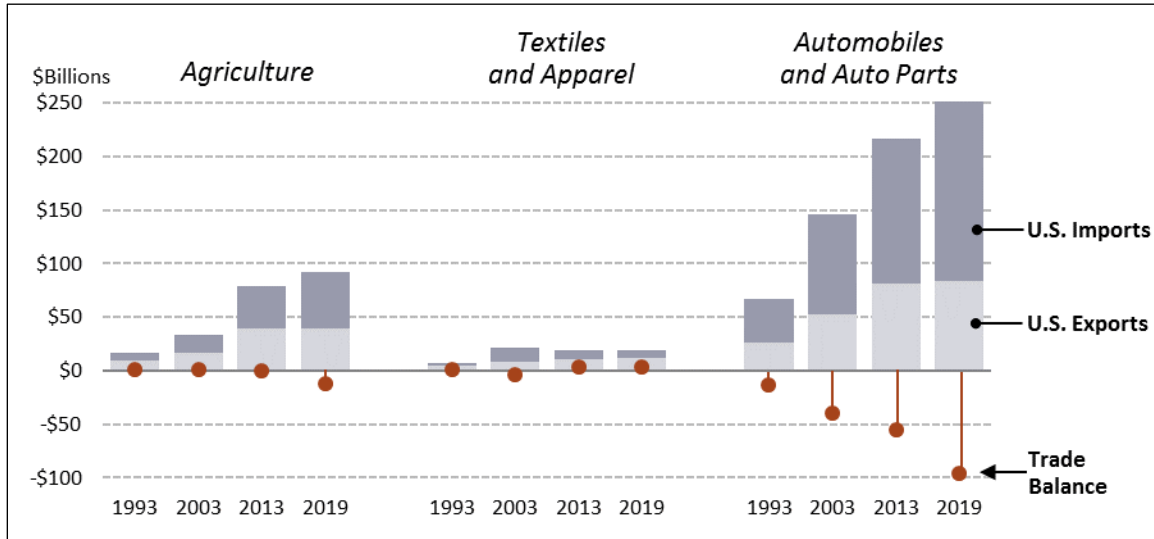

Source: Compiled by CRS using trade data from the U.S. International Trade Commission’s Interactive Tariff and Trade Data Web, at <http://dataweb.usitc.gov>.

Notes: Oil and gas trade data are at the NAIC 3-digit level, code 211, which include activities related to exploration for crude petroleum and natural gas; drilling, completing, and equipping wells; operating separators, emulsion breakers, desilting equipment, and field gathering lines for crude petroleum and natural gas; and other activities.

Merchandise Trade in Selected Industries

NAFTA removed Mexico’s protectionist policies in the motor vehicle sector and was instrumental in the integration of the motor vehicle industry in all three countries. The sector experienced some of the most significant changes in trade following the agreement and ranks first among leading exports to and imports from NAFTA countries as shown in **Figure 4**. Agriculture trade also expanded after NAFTA, but to a lesser degree than the motor vehicle industry. The trade balance in agriculture also has a far lower trade deficit. In contrast, the U.S. textiles and apparel sectors appear to have experienced adjustment costs since NAFTA, with an expansion in U.S. imports the first ten years after the agreement entered into force and a decrease since 2003. In 2019, the United States had a trade surplus in of \$3.7 billion in textiles and apparel trade with Canada and Mexico. These trade trends indicate that NAFTA achieved many of the trade and economic benefits that proponents claimed it would bring, although there have been adjustment costs. However, it is difficult to isolate the effects of NAFTA on trade in specific industries because other factors, such as economic growth and currency fluctuations, also affect trade.

Figure 4. U.S. Trade with NAFTA Partners in Selected Industries
(billions of nominal dollars)

Source: Compiled by CRS using data from the U.S. International Trade Commission, U.S. Department of Agriculture, International Trade Administration’s Office of Textiles and Apparel.

U.S. Investment with Canada and Mexico

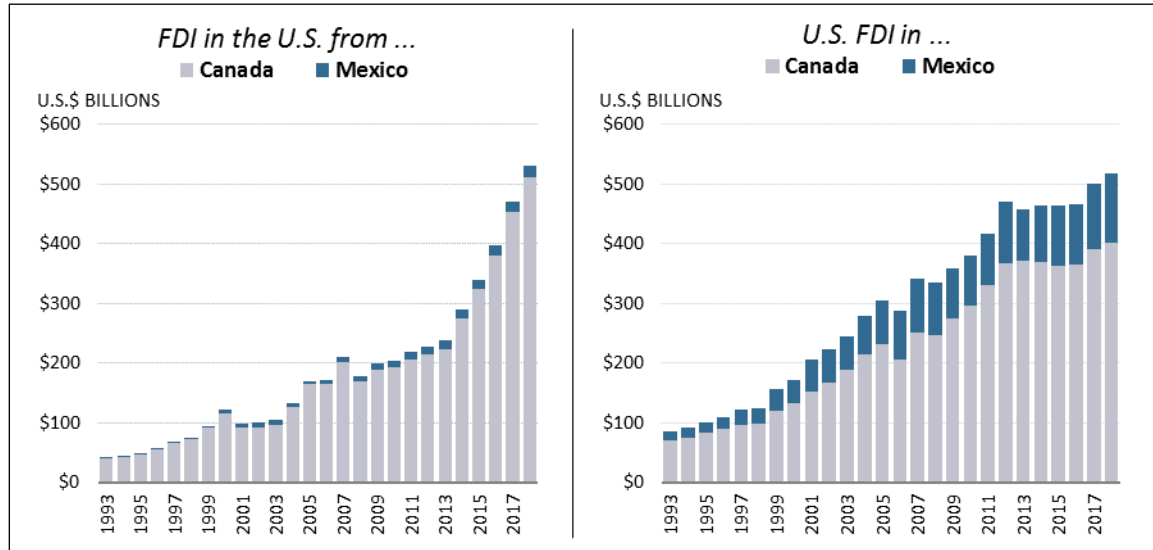

Foreign direct investment (FDI) has been an integral part of the economic relationship between the United States and NAFTA partners for many years. Two-way investment between Canada and the United States has increased markedly since NAFTA, both in terms of the stock and flow of investment. The United States is the largest single investor in Canada with a stock of FDI into Canada reaching \$401.9 billion in 2018, up from a stock of \$69.9 billion in 1993 (see **Figure 5**). U.S. investment represents about half of the total stock of FDI in Canada from global investors. The United States was the largest destination for Canadian FDI in 2017 with a stock of \$453.1 billion, a significant increase from \$40.4 billion in 1993. These trends highlight the changing view of FDI among Canadians, from one that could be considered fearful or hostile to FDI as vehicles of foreign control over the Canadian economy, to one that is more welcoming of new jobs and technologies that result from FDI.

In Mexico, the United States is the largest source of FDI. The stock of U.S. FDI in Mexico increased from \$15.2 billion in 1993 to \$114.9 billion in 2018 (see **Figure 5**). Some economists contend that Mexico’s economic and energy sector reforms have added resilience to the Mexican economy in recent years. However, investor unease about domestic policy uncertainty and the international economy persist. Ratification of USMCA may remove some of this uncertainty and longer-term prospects for export-oriented manufacturing, as well as oil production, appear positive.²² Mexican FDI in the United States, while substantially lower than U.S. investment in Mexico, has also increased rapidly, from \$1.2 billion in 1993 to \$18.7 billion in 2018.²³

NAFTA Renegotiation Process and TPA

Under Article II of the Constitution, the President has the authority, with the advice and consent of the Senate, to make treaties. Under Article I, Section 8, Congress has the authority to lay and collect duties, and to regulate foreign commerce. The President sought expedited treatment of the implementing legislation for USMCA under the Bipartisan Comprehensive Trade Promotion and Accountability Act of 2015 (TPA).²⁴

Under TPA, the President must consult with Congress before giving the required 90-day notice of his intention to start negotiations.²⁵ The Trump Administration's consultations included meetings between U.S. Trade Representative Robert Lighthizer and Members of the House Ways and Means Committee and Senate Finance Committee and with Members of the House and Senate Advisory Groups on Negotiations.²⁶ The Office of the United States Trade Representative (USTR) held public hearings and has received more than 12,000 public comments on NAFTA renegotiation.²⁷

In order to use the expedited procedures of TPA, the President must notify and consult with Congress before initiating and during negotiations, and adhere to several reporting requirements following the conclusion of any negotiations resulting in an agreement. The President must conduct the negotiations based on the negotiating objectives set forth by Congress in the 2015 TPA authority. See box below for the dates on which these requirements were met.

²⁴ P.L. 114-26.

²⁵ CRS In Focus IF10297, *TPP-Trade Promotion Authority (TPA) Timeline*, by Ian F. Fergusson.

²⁶ These groups were created by TPA to provide additional opportunities for consultation with the committees of jurisdiction, as well as other committees with jurisdiction over potential subject matter in the trade agreement.

²⁷ Office of the United States Trade Representative, *Summary of Objectives for the NAFTA Renegotiation*, July 17, 2017, p. 2, <https://ustr.gov/about-us/policy-offices/press-office/press-releases/2017/july/ustr-releases-nafta-negotiating>.

TPA: Key TPA Dates and Deadlines for USMCA

- May 17, 2017: President sends to Congress required 90-day notification of intent to begin negotiations with Canada and Mexico.
 - July 17, 2017: USTR published a summary of the Trump Administration's specific objectives with respect to the negotiations.
 - August 16, 2017: Negotiations with Mexico and Canada begin.
 - August 30, 2018: Notification to Congress of intent to sign agreement.
 - September 30, 2018: USMCA draft text released. Advisory committee reports released.
 - November 30, 2018: USMCA is signed.
 - January 29, 2019: List of required changes to U.S. law delivered to Congress.
 - April 18, 2019: International Trade Commission (ITC) report released.
 - May 30, 2019: Draft Statement of Administrative Action (SAA) and text of the agreement submitted to Congress.
 - December 13 and 16, 2019: Implementing legislation introduced in House of Representatives (H.R. 5430) and companion bill introduced in the Senate (S. 3052).
 - December 19, 2019, and January 7, 2020: Legislation approved by the House of Representatives by a vote of 385-41 and by the Senate by a vote of 89-10.
 - January 29, 2020: President Trump signs the bill into law (P.L. 116-113).
-

Trade Deficit Reduction

The Trump Administration, for the first time in the negotiating objectives of an FTA, indicated its aim to improve the U.S. trade balance and reduce the trade deficit with NAFTA countries in the renegotiation of NAFTA.²⁸ As mentioned earlier, the trade balance with NAFTA partners has fluctuated since the agreement entered into force. President Trump and some officials within his Administration believe that trade deficits are detrimental to the U.S. economy.²⁹

Economists generally argue that it is not feasible to use trade agreement provisions as a tool to decrease the deficit because trade imbalances are determined by underlying macroeconomic fundamentals, such as a savings-investment imbalance in which the demand for capital in the U.S. economy outstrips the amount of gross savings supplied by households, firms, and the government sector.³⁰ According to some economists, a more constructive alternative would be to help strengthen Mexico's economy and boost Mexico's imports from the United States.³¹ Others contend that FTAs are likely to affect the composition of trade among trade partners, but have little impact on the overall size of the trade deficit.³² They argue that trade balances are incomplete measures of the comprehensive nature of economic relations between the United

²⁸ Office of the United States Trade Representative (USTR), *Summary of Objectives for the NAFTA Renegotiation*, July 17, 2017, p. 4.

²⁹ Peter Navarro, a Trump Administration trade official states that trade deficits have a negative effect on GDP and believes that trade deficit reduction is one of four key factors needed to achieve GDP growth. In a *Wall Street Journal* commentary, he stated that trade deficits transfer wealth to other countries and contends that "tough, smart negotiations is [sic] a way to increase net exports—and boost the rate of economic growth." See Peter Navarro, "Why the White House Worries About Trade Deficits," *The Wall Street Journal*, March 5, 2017.

States and its trading partners, and maintain that trade imbalances are determined by macroeconomic fundamentals and not by trade policy.³³

From this perspective, it is not clear how the Administration would expect the USMCA to reduce the trade deficit.

USMCA

USMCA, comprised of 34 chapters and 12 side letters, retains most of NAFTA's market-opening commitments, while making notable changes to market access provisions for autos and agriculture products, and to rules and disciplines, such as on investment, government procurement, and IPR. New issues, such as digital trade, state-owned enterprises, anticorruption, and currency misalignment, are also addressed. On December 10, 2019, USMCA parties agreed to a Protocol of Amendment to USMCA.³⁴ The revisions include modifications to key elements of the original text regarding dispute settlement, labor and environmental provisions, intellectual property rights protection, and steel and aluminum requirements in the motor vehicle industry rules of origin. The following selective topics provide an overview of USMCA provisions and a comparison to NAFTA provisions.

Rules of Origin

Rules of origin in NAFTA and other FTAs help ensure that the benefits of the FTA are granted only to goods produced by the parties that are signatories to the FTAs rather than to goods made wholly or in large part in other countries. If a U.S. import does not meet NAFTA rules-of-origin requirements, it will enter the United States under another import program or at U.S. MFN tariff rates. In the case of NAFTA, most goods that contain materials from non-NAFTA countries may also be considered as North American if the materials are sufficiently transformed in the NAFTA region to go through a Harmonized Tariff Schedule (HTS) change in tariff classification (called a "tariff shift"). In many cases, goods must have a minimum level of North American content in addition to undergoing a tariff shift. Regional value content may be calculated using either the "transaction-value" or the "net-cost" method. The transaction-value method, which is simpler, is based on the price of the good, while the net-cost method is based on the total cost of the good less the costs of royalties, sales promotion, and packing and shipping. Producers generally have the option to choose which method they use, with some exceptions, such as the motor vehicle industry, which must use the net-cost method.³⁵

The U.S. proposal on tightening rules of origin in the motor vehicle industry was viewed as one of the more contentious issues in the negotiations.

Motor Vehicle Industry

NAFTA phased out U.S. tariffs on motor vehicle imports from Mexico and Mexican tariffs on U.S. and Canadian products as long as they met the rules of origin requirements of 62.5% North American content for autos, light trucks, engines and transmissions; and 60% for automotive parts. Some tariffs were eliminated immediately, while others were phased out in periods over 5

³³ Ibid.

³⁴ The Protocol of Amendment to the United States-Mexico-Canada Agreement is available at <https://ustr.gov/trade-agreements/free-trade-agreements/united-states-mexico-canada-agreement/protocol-amendments>.

³⁵ CRS Report RL34524, *International Trade: Rules of Origin*, by Vivian C. Jones.

to 10 years. The agreement phased out Mexico's restrictive auto decrees, which for many years imposed high import tariffs and investment restrictions in Mexico's auto sector, and opened the Mexican motor vehicle sector to trade with and investment from the United States.³⁶

USMCA tightens auto rules of origin by including

- new motor vehicle rules of origin and procedures, including product-specific rules, and requiring 75% North American content;
- for the first time in a trade agreement, wage requirements stipulating 40%-45% of North American auto content be made by workers earning at least \$16 per hour;
- a requirement that 70% of a vehicle's steel and aluminum must originate (melted and poured) in North America; and
- a provision aiming to streamline the enforcement of manufacturers' rules of origin certification requirements.

In addition, side letters exempt from potential Section 232 tariffs the following items from Canada and Mexico:

- 2.6 million passenger vehicles each from Canada and Mexico on an annual basis;
- light trucks imported from Canada or Mexico; and
- auto part imports amounting to U.S. \$32.4 billion from Canada and U.S. \$108 billion from Mexico in declared customs value in any calendar year.

During the negotiations, vehicle and parts manufacturers generally supported retaining the current rules of origin under NAFTA, whereas labor groups sought to require a higher percentage of regional content, which they believe would reduce the share of parts produced in non-NAFTA countries. Some observers state that "it is unclear" whether the auto rules of origin in the USMCA meet the requirements under the World Trade Organization's Article XXIV of the General Agreement on Tariffs and Trade.³⁷ Article XXIV states that duties and other commerce regulations between parties of a customs union "should not on the whole be higher or more restrictive" than the rate of the duties and regulations "applicable in the constituent territories prior to the formation of such union."³⁸

Some economists and other experts believe that the higher North American content requirement in USMCA will likely have unintended consequences. They contend that trade in motor vehicles within North America may not be able to meet the new requirements and may be ineligible for USMCA benefits. The Congressional Budget Office (CBO) estimated that USMCA's stricter rules of origin for motor vehicles and new wage requirements will result in a decline in duty-free imports of motor vehicles and parts into the United States.³⁹ A portion of that decline would be

³⁶ Beginning in the 1960s, Mexico had a restrictive import substitution policy in which the government sought to supply the entire Mexican market through domestically produced automotive goods. The series of auto decrees established import tariffs as high as 25%, had high restrictions on foreign auto production, prohibited imports of finished vehicles, imposed high domestic content requirements and had export requirements in which a certain amount of exports was required for every dollar of imports.

³⁷ See Jana Titievskaja and Marian Dietsch, *U.S.-Mexico-Canada Agreement (USMCA): Potential Impact on EU Companies*, European Parliament Research Service, At A Glance, December 2018; and Maria Curi, "EU think tank questions USMCA's compliance with WTO obligations," *World Trade Online*, January 16, 2019.

³⁹ Congressional Budget Office (CBO), *CBO Estimate for H.R. 5430, the United States-Mexico-Canada Agreement*

replaced by domestic production while a portion would be replaced by imports subject to duties. CBO estimates that U.S. importers of autos and parts not meeting the higher rules of origin requirements will pay approximately \$3 billion in duties over the next decade.⁴⁰ Other economists also contend that it would be more cost efficient for manufacturers of motor vehicles and motor vehicle parts to pay the MFN tariff⁴¹ of about 2.5%, rather than meet the cumbersome rules-of-origin requirements. They argue that a change in rules poses a significant risk to North American auto production, because it is likely that the new content requirements will raise production costs, resulting in higher auto prices, reduced U.S. demand, lower auto exports, and more rapid substitution of machines for workers.⁴² Auto manufacturers in Mexico are concerned that they may lose market share to Asian manufacturers.⁴³ For example, because the rules of origin in the U.S.-South Korea FTA are much lower than those in the USMCA, it is possible that motor vehicle producers would shift production to South Korea, especially in light trucks.⁴⁴

Even with these concerns, motor vehicle producers, in general, support USMCA and its ratification. Some automakers say that complying with the new rules of origin may be cumbersome, but probably manageable. Some also contend that production in the United States has the potential to increase under the agreement, although it is not clear whether this would translate into more U.S. jobs.⁴⁵ Auto industry representatives reacted favorably to the conclusion of the negotiations and generally agree with changes modernizing the agreement, such as updating border customs procedures (i.e., trade facilitation measures), digital trade provisions, and IPR protection.⁴⁶

Agriculture⁴⁷

NAFTA's agriculture provisions include tariff and quota elimination, sanitary and phytosanitary (SPS) measures, rules of origin, and grade and quality standards.⁴⁸ NAFTA set separate bilateral undertakings on cross-border trade in agriculture, one between Canada and Mexico, and the other between Mexico and the United States. As a general matter, CUSFTA provisions continued to apply on trade with Canada.⁴⁹ Under CUSFTA, Canada excluded dairy, poultry, and eggs for tariff

Implementation Act, Cost Estimate, December 16, 2019.

⁴⁰ Ibid.

⁴¹ Most-Favored Nation (MFN) Tariffs are what countries promise to impose on imports from other members of the World Trade Organization (WTO), unless the country is part of a preferential trade agreement such as a free trade agreement (FTA). In practice, MFN rates are the highest (most restrictive) that WTO members charge one another.

elimination. In return, the United States excluded dairy, sugar, cotton, tobacco, peanuts, and peanut butter. Although NAFTA resulted in tariff elimination for most agricultural products and redefined import quotas for some commodities as tariff-rate quotas (TRQs),⁵⁰ some products are still subject to high above-quota tariffs, such as U.S. dairy and poultry exports to Canada. Canada maintains a supply-management system for these sectors that effectively limits U.S. market access. These products were also exempt from Canada-Mexico trade liberalization. NAFTA also addressed SPS measures and other types of nontariff barriers that may limit agricultural trade. SPS regulations continue to be regarded by agricultural exporters as challenging to trade and disruptive to integrated supply chains.⁵¹

In conjunction with agricultural reforms underway in Mexico at the time, NAFTA eliminated most nontariff barriers in agricultural trade with Mexico, including import licensing requirements, through their conversion either to TRQs⁵² or to ordinary tariffs. Tariffs were phased out over 15 years with sensitive products such as sugar and corn receiving the longest phase-out periods. Approximately one-half of U.S.-Mexico agricultural trade became duty-free when the agreement went into effect. Prior to NAFTA, most tariffs in agricultural trade between the United States and Mexico, on average, were fairly low, though some U.S. exports to Mexico faced tariffs as high as 12%. However, approximately one-fourth of U.S. agricultural exports to Mexico (by value) were subjected to restrictive import licensing requirements.⁵³

In the USMCA negotiations on agriculture, a principal U.S. demand was for additional market access to Canada's supply-management-restricted dairy, poultry, and egg markets. This system places a tariff-rate quota on imports of those products into Canada. While most of the in-quota tariff levied is 0%, out of quota tariffs (TRQ) can reach 313.5% for dairy products. Canada was not willing to abolish supply management, but did allow a yearly expansion of the TRQ for dairy products; an expansion of duty-free quota for poultry from 47,000 tons to 57,000 tons in year six, and a subsequent 1% annual increase for 10 years. The TRQ for eggs would increase to 10 million dozen annually. In return, the United States is providing more access to Canadian dairy, sugar, peanuts and cotton. U.S. tariffs for peanuts and cotton are to be phased-out over five years, and TRQs for dairy and sugar products are to be increased. The United States also negotiated changes to Canadian wheat grading system and providing national treatment for beer, wine, and spirits labeling and sales. A U.S. proposal to allow trade remedies to be used for seasonal produce was not adopted.

USMCA partners agreed to several other non-market access provision in the agriculture and sanitary and phytosanitary standards chapter. These include

- regulatory alignment among the parties;
- protection for proprietary formulas for pre-packaged foods and food additives (limited to furthering "legitimate objective[s]," which is not defined); and
- SPS rules based on "relevant scientific principles;" greater transparency in SPS rules.

⁵⁰ Tariff-rate quotas (TRQs) allowed NAFTA partners to export specified quantities of a product to other NAFTA countries at a relatively low tariff, but subjected all imports of the product above a pre-determined threshold to a higher tariff.

⁵¹ CRS In Focus IF10682, *NAFTA Renegotiation: Issues for U.S. Agriculture*, by Renée Johnson.

⁵² Tariff-rate quotas (TRQs) allowed NAFTA partners to export specified quantities of a product to other NAFTA countries at a relatively low tariff, but subjected all imports of the product above a pre-determined threshold to a higher tariff.

⁵³ Business Roundtable, *NAFTA: A Decade of Growth*, p. 35.

Biotechnology provisions affecting agriculture include

- transparent and timely application and approval process for crops using biotechnology;
- procedures for import shipments containing a low-level presence of an unapproved crop produced with biotechnology; and
- establishment of a working group on agricultural biotechnology.

Customs and Trade Facilitation

Customs and trade facilitation relates to the efficient flow of legally traded goods in and out of the United States. Enforcement of U.S. trade laws and import security are other important components of customs operations at the border. NAFTA's chapter on customs procedures includes provisions on certificates of origin, administration and enforcement, and customs regulation and cooperation. More recent agreements have modernized provisions in regard to customs procedures and trade facilitation. The World Trade Organization (WTO) Trade Facilitation Agreement (TFA), the newest international trade agreement in the WTO, entered into force on February 22, 2017. Two-thirds of WTO members, including the United States, Canada, and Mexico, ratified the multilateral agreement.⁵⁴ Trade facilitation measures aim to simplify and streamline customs procedures to allow the easier flow of trade across borders and thereby reduce the costs of trade. There is no precise definition of trade facilitation, even in the WTO agreements. Trade facilitation can be defined narrowly as improving administrative procedures at the border or more broadly to also encompass behind-the-border measures and regulations. The TFA aims to address trade barriers, such as lack of customs procedural transparency and overly burdensome documentation requirements.⁵⁵

Under USMCA, parties affirm their rights and obligations under the TFA of the WTO. USMCA provisions also include commitments to administer customs procedures in such ways as to facilitate trade or the transit of a good while supporting compliance with domestic laws and regulations. Parties commit to create a Trade Facilitation Committee to cooperate on trade facilitation and adopt additional measures if necessary. Other provisions include measures for online publication of information and resources related to trade facilitation, communications mechanisms, establishment of enquiry points to respond to enquiries by interested persons, rules for issuing written advance customs rulings, procedures for efficient release of goods in order to facilitate trade between the parties, expedited customs procedures for express shipments, automated risk analysis and management procedures, creation of a single-access window system to enable electronic submission through a single entry point for importation into the territory of another party, and transparency procedures. Given the magnitude and frequency of U.S. trade with USMCA partners, more updated customs provisions in USMCA could have a significant impact on companies engaged in trilateral trade.⁵⁶

The USMCA sets *de minimis* customs threshold for duty-free treatment at US\$800 for the United States, C\$150 (about US\$117) for Canada, and US\$117 for Mexico. Shipment values up to these levels would enter with minimal formal entry procedures. The tax-free threshold would be set at C\$40 (about US\$31) for Canada and US\$50 for Mexico. Proponents of the higher *de minimis*

⁵⁴ CRS Report R44777, *WTO Trade Facilitation Agreement*, by Rachel F. Fefer and Vivian C. Jones.

⁵⁵ *Ibid.*

⁵⁶ The World Trade Organization's (WTO's) Trade Facilitation Agreement (TFA), if fully ratified, could also affect trade facilitation among NAFTA parties. Ninety-eight out of a necessary 109 countries have ratified the agreement.

thresholds contend that these changes will facilitate North American trade by allowing low-value parcels to be shipped across international borders tax and tariff free and with simple customs forms.⁵⁷ Some Members and other stakeholders raised concerns about a footnote that would allow the United States to decrease its threshold to a reciprocal *de minimis* amount in an amount no greater than the Canadian or Mexican threshold. They contend that lowering the current U.S. threshold could come at a cost to U.S. consumers and express carriers.⁵⁸ In the end, the footnote was dropped in the final text of the agreement.

Energy

USMCA does not have an energy chapter and moves some of NAFTA's energy provisions to other parts of the agreement. The USMCA adds a new chapter specifically recognizing Mexico's constitutional prohibitions on foreign investment or ownership of Mexico's energy sector. Other provisions in the USMCA, such as the investor-state dispute settlement (ISDS) provisions in regard to Mexico's energy sector, would help protect private U.S. energy projects in Mexico.

NAFTA included explicit country-specific exceptions and reservations, including the energy sector in Mexico. In NAFTA's energy chapter, the three parties confirmed respect for their constitutions. This was of particular importance for Mexico and its 1917 Constitution, which established Mexican national ownership of all hydrocarbons resources. Under NAFTA, the Mexican government reserved to itself strategic activities, including investment and provisions in such activities, related to the exploration and exploitation of crude oil, natural gas, and basic petrochemicals. Mexico also reserved the right to provide electricity as a public service within the country. Despite these exclusions from NAFTA, energy remains a central component of U.S.-Mexico trade.⁵⁹

Existing foreign investors in Mexico's energy sector would likely remain protected by similar provisions such as those in NAFTA. Mexico appears to be legally bound by its 2013 constitutional energy reforms in the energy sector. In 2013, the Mexican Congress approved the Peña Nieto Administration's constitutional reform proposals for the energy sector. The reforms restructured Mexico's state-owned oil company, PEMEX, as a "state productive company," which means that despite being owned by the state, it competes in the market like any private company.⁶⁰ It has operational autonomy, in addition to its own assets. These reforms opened Mexico's energy sector to production-sharing contracts with private and foreign investors while keeping the ownership of Mexico's hydrocarbons under state control.⁶¹ Following the reforms, Mexico adopted new procurement rules to increase efficiency and effectiveness in the procurement process.

⁵⁷ Gary Clyde Hufbauer and Euijin Jung, *Higher De Minimis Thresholds: A Win in the USMCA*, Peterson Institute for International Economics, October 15, 2018.

⁵⁸ Akin Gump, Struss Hauer & Feld LLP, *The New United States-Mexico-Canada Agreement (USMCA) Raises Canada's and Mexico's De Minimis Thresholds, but the Reciprocal Treatment Provision Poses Risks to U.S. Express Carriers and Consumers*, International Trade Alert, October 25, 2018.

⁵⁹ See CRS Report R43313, *Mexico's Oil and Gas Sector: Background, Reform Efforts, and Implications for the United States*, coordinated by Clare Ribando Seelke, and CRS Report R44747, *Cross-Border Energy Trade in North America: Present and Potential*, by Paul W. Parfomak et al.

⁶⁰ Organisation for Economic Co-operation and Development (OECD), *Fighting Bid Rigging in Public Procurement: A Review of the Procurement Rules and Practices of PEMEX in Mexico*, 2016, p. 11.

⁶¹ *Ibid.*, p. 9.

In regard to Canada, negotiators addressed a so-called “proportionality” provision contained in the energy chapters of both CUSFTA and NAFTA, which is eliminated in the USMCA. This provision provides that Canadian restrictions on energy exports cannot reduce the proportion of exports delivered to the United States. The NAFTA chapter also prohibits pricing discrimination between domestic consumption and exports to the United States. Some Canadians maintain that this provision restricts the ability of Canada to make energy policy decisions and see USMCA as representing significant progress for Canada’s energy sector.⁶²

Government Procurement

The NAFTA government procurement chapter set standards and parameters for government purchases of goods and services. Government procurement chapters typically extend national and nondiscriminatory treatment among parties and promote transparency in the tendering process. The schedule of commitments, set out in an annex to the chapter, provides opportunities for firms of each nation to bid on certain contracts for specified government agencies over a set monetary threshold on a reciprocal basis. The United States and Canada also have made certain government procurement opportunities available through similar obligations in the plurilateral WTO Government Procurement Agreement (GPA). Mexico is currently not a member of the GPA.

Supporters of expanded procurement opportunities in FTAs argue that the reciprocal nature of the government procurement provisions in FTAs allows U.S. firms access to major government procurement market opportunities overseas. In addition, supporters claim open government procurement markets at home allow government entities to accept bids from partner country suppliers, potentially making more efficient use of public funds.

Other stakeholders contend that public procurement should primarily benefit domestic industries. The Buy American Act of 1933, as amended, limits the ability of foreign companies to bid on government procurements of manufactured and construction products. Buy American provisions periodically are proposed for legislation such as infrastructure projects requiring government purchases of iron, steel, and manufactured products.⁶³ Such restrictions are waived for products from countries with which the United States has FTAs or to countries belonging to the GPA. The Trump Administration has made it a priority to support strong Buy American and Hire American policies in government procurement and has sought to minimize government procurement commitments with other parties.

The USMCA government procurement chapter only applies to procurement between Mexico and the United States. It is the first U.S. FTA not to include procurement commitments for all parties. Procurement opportunities between the United States and Canada continue to be covered by the plurilateral WTO GPA. USMCA carries over much of the NAFTA government procurement chapter’s coverage for U.S.-Mexico procurement. It covers largely the same entities and maintains the same thresholds as NAFTA, as adjusted annually for inflation. Core provisions include

- Promote transparency in the tendering process through online tender information and descriptions;
- Provide online application and documentation processes without cost to the applicant;

⁶² Canadian Labour Congress, “13 Facts You Need to Know About the United States-Mexico-Canada Agreement (USMCA),” October 18, 2018.

⁶³ U.S. manufactured products have been defined in regulation as containing at least 50% domestic content.

- Provide for publication of post-award explanations of procurement decisions;
- Exclude government procurement from the financial services chapter;
- Exclude textile and apparel procured by the Transportation Security Administration (TSA) under the “Kissell Amendment;”
- Allow Mexico to set aside annual procurement contracts of \$2.328 billion, annually adjusted for inflation, to Mexican suppliers; and
- Allow for coverage of build-operate-transfer (BOT) contracts. (As Mexico has taken an exception to this provision, the United States will extend this coverage to Mexico when Mexico reciprocates.)

The exclusion of Canada is a break from previous government procurement chapters in U.S. FTAs. As noted above, procurement opportunities in each country for U.S. and Canadian firms will continue to be covered by the GPA, which was revised and updated in 2014. The national treatment and transparency provisions are common to both the GPA and USMCA, as are the provisions modernizing the agreement to provide for online tendering. The differences primarily are with the schedules and the thresholds. In some areas, the GPA provides a more open procurement market. For example, the GPA covers 75 U.S. government entities, including 35 U.S. states, whereas NAFTA covers 56 federal entities and does not cover state procurement. The GPA has a higher monetary threshold than NAFTA and USMCA for procurement of goods and services (\$180,000 v. \$80,317), but a lower construction procurement threshold (\$6.9 million v. \$10.4 million).⁶⁴ In addition, while the USMCA uses a negative list approach for services (all services included unless specifically excluded), Canada—though not the United States—maintains a positive list (only services specifically enumerated are covered) for services in the GPA. Government procurement between Canada and Mexico will continue to be covered by the Comprehensive and Progressive Agreement for Trans-Pacific Partnership (CPTPP or TPP-11).

Some industry groups criticized the exclusion of Canada and financial services from the agreement. The Automotive and Capital Goods Advisory Committee (ITAC-2) maintained that excluding countries sets a bad precedent for future FTAs, that there was a “not inconceivable” chance that the United States could withdraw from the GPA, leaving no reciprocal access to the Canadian procurement market, and that other countries with FTAs with Canada, such as the EU and the TPP-11, would have greater access to the Canadian procurement market than that provided by the GPA.⁶⁵ The Services ITAC (ITAC-10) expressed concern that continued access to government procurement for financial services under USMCA has been called into doubt by the exclusion of that sector from the agreement. ITAC-10 noted that, under NAFTA coverage, U.S. insurance providers cover two-thirds of Mexican government employees.⁶⁶

Investment

NAFTA removed significant investment barriers, ensured basic protections for NAFTA investors, and provided a mechanism for the settlement of disputes between investors and a NAFTA country. U.S. FTAs, including NAFTA and bilateral investment treaties (BITs), maintain core investor protections reflecting U.S. law, such as obligations for governments to provide investors with nondiscriminatory treatment, a minimum standard of treatment, and protections against uncompensated expropriation, among other provisions.⁶⁷ Since NAFTA, investment chapters in FTAs and the U.S. model BIT clarified certain provisions, including commitments to affirm more clearly a government’s right to regulate for environmental, health, and other public policy objectives.

USMCA provisions, in general, largely track those of NAFTA, with the exception of the elimination of some investor-state dispute settlement (ISDS) provisions in NAFTA’s investment chapter (See “Investor-State Dispute Settlement (ISDS)”). During the negotiations of the USMCA, the U.S. business community strongly opposed reported U.S. proposals to scale back or eliminate NAFTA ISDS provisions. The American Petroleum Institute (API), for example, stated that strong ISDS provisions protect U.S. business interests and that weakening or eliminating NAFTA’s ISDS would “undermine U.S. energy security, investment protections and our global energy leadership.”⁶⁸ On the other hand, U.S. labor and civil society groups welcomed the Administration’s more skeptical approach to ISDS. The 2015 TPA called for “providing meaningful procedures for resolving investment disputes,” which may affect congressional consideration of an agreement.⁶⁹

USMCA clarifies language related to national treatment and most-favored-nation treatment. In determining whether an investment is afforded national treatment in the context of expropriation, a “like circumstances” analysis can be used. Under the article, “like circumstances... depends on the totality of the circumstances including whether the relevant treatment distinguishes between investors or investments on the basis of legitimate public welfare objectives.”⁷⁰

Minimum Standard of Treatment (MST)

USMCA, like NAFTA, requires parties to provide MST to investments in accordance with applicable customary international law, including fair and equitable treatment and full protection and security. It defines the applicable standard of treatment for a covered investment as the customary international law MST of aliens, and that “fair and equitable treatment” and “full protection and security” do not create additional substantive rights. However, the USMCA clarifies that a party’s action (or inaction) that may be inconsistent with investor expectations is not, on its own, a breach of MST, even if loss or damage to the investment follows.

Performance Requirements

USMCA prohibits parties from imposing specific “performance requirements” in connection with an investment or related to the receipt of an advantage in connection with it. These include

⁶⁷ See CRS In Focus IF10052, *U.S. International Investment Agreements (IIAs)*, by Martin A. Weiss and Shayerah Ilias Akhtar.

⁶⁸ American Petroleum Institute (API), *API Supports NAFTA Modernization that Retains Strong Protections for U.S. Investors*, February 20, 2017, <http://www.api.org/news-policy-and-issues/news/2018/02/20/api-supports-nafta-modernization-that-protect-us-investors>.

⁶⁹ P.L. 114-26, §102 (b)(4)(f).

⁷⁰USMCA Article 14.5.4

prohibitions on performance requirements such as to export a given level or percentage of goods, achieve a given level or percentage of domestic content, or transfer a particular technology. A new feature includes prohibitions on performance requirements related to the purchase, use, or according of a preference to a technology of the party (or of a person of the party), and related to certain royalties and license contracts.

Denial of Benefits

USMCA's denial of benefits article, among other things, permits a party to deny the investment chapter's benefits to an investor that is an enterprise of another party (and to the investments of that investor) if that enterprise is owned or controlled by a person of a non-party or of the denying party or does not have "substantial business activities" in the territory of any party *other* than the party denying benefits. This article presumably is intended to address some stakeholder concerns that the chapter could be used to afford shell companies access to its protections.

Government Right to Regulate

Unlike NAFTA, USMCA contains a provision stating that, except in rare circumstances, nondiscriminatory regulatory action by a party to protect legitimate public welfare objectives (e.g., in public health, safety, and the environment) do not constitute indirect expropriation. The USMCA includes a statement that nothing in the Investment Chapter shall be construed to prevent a government from regulating in a manner sensitive to "health, environmental, and other regulatory objectives," as long as the action taken is otherwise consistent with the chapter. Previous U.S. FTAs, including NAFTA, limited the affirmation of a government's right to regulate to "environmental concerns."

Investor-State Dispute Settlement (ISDS)

ISDS has been a controversial aspect of the NAFTA investment chapter. It is a form of binding arbitration that allows private investors to pursue claims against sovereign nations for alleged violations of the investment provisions in trade agreements. It is included in NAFTA and nearly all other U.S. FTAs that have been enacted since then, and is also a core provision in U.S. bilateral investment treaties (BITs). Generally, ISDS tribunals are composed of three lawyer-arbitrators: one chosen by the claimant investor, one by the respondent country, and one by mutual decision between the two parties. Most cases follow the rules of the World Bank's Centre for Settlement for Investor Dispute or the United Nations Commission on International Trade Law. Fifty-nine ISDS actions have been adjudicated under NAFTA, with the majority coming after 2004.⁷¹

Supporters argue that ISDS is important for protecting investors from discriminatory treatment and are modeled after U.S. law. They also argue that trade agreements do not prevent governments from regulating in the public interest, with clear exceptions for these actions, as well as for national security and for prudential reasons; ISDS remedies are limited to monetary penalties; and ISDS cannot force governments to change their laws or regulations. Critics counter that companies use ISDS to restrict governments' ability to regulate in the public interest (such as for environmental or health reasons), leading to "regulatory chilling" even if an ISDS outcome is not in a company's favor. The United States, to date, has never lost a claim brought against it under ISDS in a U.S. investment agreement.

⁷¹ United Nations Conference on Trade and Development (UNCTAD).

ISDS provisions in USMCA substantially revise longstanding provisions in NAFTA, other U.S. FTAs, and current BITs that were actively sought by past Administrations. Significantly, ISDS between Canada and the United States is ended under the new agreement. U.S. and Mexican investors would not be able to bring arbitration claims under USMCA against Canada, nor would Canadian investors bring such claims against the United States or Mexico. With respect to Mexico and the United States, the USMCA would limit ISDS to claimants regarding government

contracts in natural gas, power generation, infrastructure, transportation, and telecommunications sectors; or in other sectors provided the claimant exhausts national remedies first. Canada and Mexico are maintaining ISDS among themselves through CPTPP.

USMCA continues ISDS in three circumstances:

- Legacy claims from existing investments are eligible for arbitration under NAFTA ISDS provisions for three years from the date of NAFTA termination;
- Direct expropriation claims, including claims of violation of national treatment, will continue to be eligible for arbitration for United States and Mexican investors, provided that they exhaust domestic remedies first. Indirect expropriation, in which an action or series of actions by a party has an effect equivalent to direct expropriation without formal transfer of title or outright seizure, is no longer covered; and
- Government contracts in certain covered sectors (oil and gas, power generation, telecommunications, transportation, and infrastructure) will be eligible for arbitration under USMCA ISDS. This use of ISDS is designed to protect investors in heavily regulated industries whose investments may be affected by the presence of state-owned enterprises in the sector.

**NAFTA Record on ISDS
As of January 2020**

- 66 cases initiated under NAFTA Investment Chapter.
- U.S. Investors have won 10 cases against NAFTA partners (5 against Canada, 5 against Mexico).
- Foreign investors have won 0 cases against the United States.
- 26 decided in favor of state (on merits/no jurisdiction); 10 decided in favor of investor; 8 settled; 10 discontinued; 12 pending.
- Individual cases initiated against: United States: 17 Canada: 27; Mexico: 22
- 10 decisions favorable to U.S. government as respondent; 0 decisions unfavorable; 4 settled; 3 discontinued; 0 pending.
- 8 decisions favorable to Canadian government as respondent; 5 unfavorable; 4 settled; 5 discontinued; 5 pending.
- 8 decisions favorable to Mexican government as respondent; 5 unfavorable; 0 settled; 2 discontinued; 7 pending.
- Nationality of investors in cases initiated against United States: Canada (16); Mexico (1).
- Respondent governments in cases initiated by U.S. investors: Canada (27); Mexico (20).

Services

The United States has a highly competitive services sector and has made services trade liberalization a priority in its negotiations of FTAs, including NAFTA and USMCA.⁷² NAFTA covered core obligations in services trade in its own chapter, but because of the complexity of the issues, it also covered services trade in other related chapters, including financial services and telecommunications. NAFTA contained the first “negative list” services chapter in a U.S. trade agreement, which is maintained in USMCA. With a negative list, all services are covered under the agreement unless specifically excluded from it, or unless NAFTA parties reserved a service to domestic providers at the time of the agreement. This approach generally is considered to be more comprehensive than the “positive list approach” used in the WTO General Agreement on Trade in Services (GATS), which requires each covered service to be identified. The negative list approach also implies that any new type of service that is developed after the agreement enters into force is automatically covered unless it is specifically excluded.

Key provisions of the services chapter in USMCA include

- Nondiscriminatory treatment of services from partner-country providers in like circumstances, including national treatment and MFN treatment;
- No limitations on the number of service suppliers, the total value or volume of services provided, the number of persons employed, or the types of legal entities or joint ventures that a foreign service supplier may employ;
- Prohibition on locality requirements that a service provider maintain a commercial presence in the country of the buyer;
- Support of mutual recognition of professional qualifications for certification of service providers;
- Transparency in the development and application of government regulations; and
- Allowance for payments and transfers of capital flows “freely and without delay” that relate to the provision of services, with permissible restrictions in some cases for bankruptcy and criminal offences.

Express Delivery

NAFTA did not contain commitments on express delivery; however, the United States made market access of express delivery services a priority in its more recent FTA negotiations. USMCA addresses express delivery in a chapter annex.⁷³ The commitments on express delivery focus, in particular, on cases where a government-owned and operated postal system provides express delivery services competing with private sector providers. USMCA stipulates that the postal system cannot use revenue generated from its monopoly power in providing postal services to cross-subsidize an express delivery service. USMCA also requires independence between express delivery regulators and providers, prohibits the requirement of providing universal postal service as a prerequisite for express delivery, and prohibits fees on express delivery providers for the purpose of funding other such providers. In addition, USMCA specifies a threshold level for the customs *de minimis*, a critical commitment for express delivery providers and small businesses as

⁷² For more information, see CRS Report R43291, *U.S. Trade in Services: Trends and Policy Issues*, by Rachel F. Fefer, and CRS Report R44354, *Trade in Services Agreement (TiSA) Negotiations: Overview and Issues for Congress*, by Rachel F. Fefer.

⁷³ USMCA, Annex 15-A.

shipments valued below the *de minimis* receive expedited customs treatment and pay no duties or taxes.

De Minimis Threshold

The *de minimis* threshold for assessing customs duties on imported goods was a new issue in the USMCA negotiations, one which affects several negotiating areas such as customs, services, and e-commerce. The issue involves the threshold customs valuation assessed among the three USMCA nations for goods entering the country (mailed, delivered by courier, transported by distributors, etc.) without charging duty or sales tax. The United States has sought increased thresholds from its trading partners. While the United States currently exempts duties for shipments under \$800 (P.L. 114-125, §901), Canada's threshold is C\$20 (recently about US\$15-16) and Mexico's is \$50. USMCA raises the customs threshold for duty free treatment to \$117 (C\$150) for Canada and Mexico. The tax-free threshold was set at \$50 for Mexico and C\$40 (about \$31) for Canada. A footnote in the original USMCA text allowed the U.S. threshold to be lowered to achieve reciprocity, a controversial provision to some Members of Congress. The footnote was dropped in the final USMCA text.

Temporary Entry for Business Purposes

In addition to cross-border trade in services, a person supplying the service may travel to and provide certain services in the location where the service is performed. USMCA, like NAFTA, includes commitments on temporary entry for service professionals, such as accountants, architects, legal, and medical providers, and other business personnel, in order to facilitate such trade. As temporary entry has been a controversial issue in the context of previous trade agreements, the USMCA chapter on temporary entry largely replicates NAFTA's provisions. USMCA does not place new restrictions on the number of entrants or expand the list of eligible professionals, as many businesses and other service providers had hoped.

Financial Services

Financial services, including insurance and insurance-related services, banking and related services, as well as auxiliary services of a financial nature, are addressed in a separate USMCA chapter as in previous U.S. FTAs. The financial services chapter adapts relevant provisions from the foreign investment chapter and the cross-border trade in services chapter. The prudential exception in both USMCA and NAFTA provides that nothing in the FTA would prevent a party to the agreement from imposing measures to ensure the integrity and stability of the financial system. As with NAFTA and other FTAs, USMCA distinguishes between financial services traded across borders and those sold by a provider with a commercial presence in the home country of the buyer. In the case of providers with a foreign commercial presence, the USMCA applies the negative list approach with commitments applying generally except where noted; in the case of cross-border trade, the language limits coverage to a positive list of specific banking and insurance services as defined by each country.⁷⁴

A key USMCA provision that drew attention during the debate relates to the prohibition on data localization requirements. Financial services firms rely on cross-border data flows to ensure data security, create efficiencies and cost savings through economies of scale, and utilize internet cloud services that are often provided by U.S. technology firms. Localization requirements imposed by countries could require companies to have in-country servers and data centers to store data. These types of regulations can create additional costs and may serve as a deterrent for firms

⁷⁴ See USMCA Annex 17-A for a complete listing of insurance, banking, and other financial services covered by the cross-border trade in financial services disciplines.

seeking to enter new markets or a disguised barrier to trade. Localization supporters, though, claim they increase local control, privacy protection, and data security.

NAFTA allowed the transfer of data in and out of a party in the ordinary course of business. USMCA strengthens the language to protect the free flow of data and removes the carve-out provided that a party's financial regulatory authorities have "for regulatory and supervisory purposes, immediate, direct, complete, and ongoing access" to data located in another party's territory.⁷⁵ Canada has a one-year transition period to implement the data localization prohibition.

USMCA also includes commitments on electronic payment card services. It requires that each country in the agreement allow for the supply, by persons of other parties, of electronic payment services for payment card transactions, defined by each country, generally including credit and debit cards. The provisions on card services would, however, allow for certain preconditions of access, including requiring a representative or office within country.

Other new USMCA financial services provisions

- exclude government procurement from financial services disciplines;
- modify investor-state dispute settlement (ISDS) through a bilateral annex on Mexico-United States Investment Disputes in Financial Services;
- allow a financial institution from one party with a presence in a second party to have access to the latter's payment and clearance system; and
- protect source code and algorithms and a prohibition on forced technology transfer in the digital trade section.

Telecommunications

The telecommunication chapter in NAFTA required regulatory transparency; interconnection among providers; reasonable and nondiscriminatory access to network infrastructure and government-controlled resources like spectrum bandwidth for reasonable rates; and protection of the supplier's options for employing technology. The USMCA telecommunications chapter adopts these provisions and is the first U.S. FTA to cover mobile service providers. The chapter promotes cooperation on charges for international roaming services and allows regulation for mobile roaming service rates. Other provisions aim to ensure that suppliers can resell and unbundle services, and that suppliers can furnish value-added services. The chapter promotes the independence of regulators. It does not cover television or radio broadcast or cable suppliers and does not contain the provision in NAFTA recognizing the importance of international standards for global compatibility and interoperability.

The chapter has the effect of binding Mexico to its 2013 Constitutional reforms in telecommunications, by guaranteeing the independence of the regulatory commission, nondiscriminatory repurchase rates, and interconnection obligations. USMCA does not affect Canadian restrictions on foreign ownership of telecommunications common carriers.

Digital Trade

NAFTA was negotiated and came into effect at the dawn of the consumer Internet age, and it did not contain provisions to address barriers and rules and disciplines on digital trade. Congress established principal negotiating objectives in TPA-2015 on digital trade in goods and services, as well as on cross-border data flows. The objectives include equal treatment of electronically-

⁷⁵ USMCA Article 17.18.

delivered goods and services, as compared to physical products, protection of cross-border data flows, and prevention of data localization regulations, as well as prohibitions on duties on electronic transmissions.

The USMCA digital trade chapter broadly covers all industries, but explicitly excludes government procurement or provisions on data held or processed by governments of the parties. It also does not include financial services, which has separate obligations in the financial services chapter. Overall, the chapter aims to promote digital trade and the free flow of information, and to ensure an open Internet. While the majority of the obligations related to digital trade are found in the digital trade chapter, there are relevant provisions in other chapters, including financial services, IPR, and telecommunications.

Key provisions of the USMCA digital trade chapter

- ensure nondiscriminatory treatment of digital products;
- prohibit cross-border data flows restrictions and data localization requirements;
- prohibit requirements for source code or algorithm disclosure or transfer as a condition for market access, with exceptions;
- prohibit customs duties or other charges for electronically transmitted products;
- require parties to have online consumer protection and anti-spam laws, and a legal framework on privacy;
- promote cooperation on cybersecurity, and risk-based strategies and consensus-based standards over prescriptive regulation in combating cybersecurity risks and events;
- prohibit imposition of liability for harms against Internet services providers or users related to information stored, processed, transmitted, distributed, or made available by the service, with the exclusion of ISP liability for intellectual property rights (IPR) infringement; and
- promote publication of open government data in machine readable format for public usage.

Intellectual Property Rights (IPR)

NAFTA was the first FTA to contain an IPR chapter, which in turn was the model for the WTO Trade-Related Aspects of Intellectual Property Rights (TRIPs) Agreement that came into effect a year later in 1995.⁷⁶ IPR chapters in trade agreements include provisions on patents, copyrights, trademarks, trade secrets, geographical indications (GIs), and enforcement. NAFTA predated the widespread use of the commercial Internet, and subsequent IPR chapters in U.S. FTAs contain obligations more extensive than those found in TRIPS and NAFTA. In general, they have followed the TPA negotiating objective that agreements should “reflect a standard of protection similar to that found in U.S. law.” The President’s NAFTA renegotiation objectives reflect TPA-2015. The United States achieved most of what it sought in the USMCA.

⁷⁶ See CRS In Focus IF10033, *Intellectual Property Rights (IPR) and International Trade*, by Shayerah Ilias Akhtar and Ian F. Fergusson.

Patents

Patents protect new innovations, such as pharmaceutical products, chemical processes, business technologies, and computer software. These provisions largely track provisions in more recent U.S. FTAs:

- **Patentable Subject Matter.** USMCA provides that patents be made available for any invention, whether product or process, in all field of technology, provided that an invention is new, involves an inventive step, or is capable of industrial application. Patent protection for new uses, methods, or processes of a known product were included in the USMCA, but were removed by the Protocol of Amendment.
- **Patent and Regulatory Term Extension.** Provides an extension for “unreasonable” delays in the patent examination or regulatory approval processes. NAFTA allowed countries to provide such an extension but did not define unreasonable. USMCA defines unreasonable for patent delays as five years after the filing of the application, or three years after a request for examination has been made.
- **Patent Linkage.** Mandates notification to the patent holder when a generic manufacturer seeks to rely on an originator’s test data for marketing approval, and obligates the marketing authority to prevent a generic manufacturer from seeking market approval without the rights holder’s consent. It provides flexibility on the notification system and the procedures (e.g., judicial or administrative proceedings, and remedies, such as preliminary injunctions) for a patent holder to assert his rights, as well as for a party to challenge the patent’s validity. This provision was not in NAFTA, but has been in more recent U.S. FTAs. The USMCA Protocol of Amendment allows parties to provide for “effective rewards,” such as a period of market exclusivity, for a successful challenge to the validity or a finding of non-infringement of a patent.
- **Protection of test data.** Protects test data that patent holders submit for regulatory approval for pharmaceuticals on which generics may later rely. These provisions were not in NAFTA. USMCA provisions are described below.

IPR Highlights in USMCA

Digital enforcement. Extends IPR enforcement, including for copyrights, to the digital environment.

Trade secrets. Requires criminal procedures and penalties for trade secret theft, including cybertheft; also clarifies that SOEs are subject to trade secret protection requirements.

Internet Service Providers (ISPs). Requires “notice and takedown” to address ISP liability while allowing an alternative system to remain for Canada (e.g., “notice and notice”).

Trademarks. Extends trademark protection to sounds and to “collective marks” and removes administrative requirements to enable easier protection and enforcement of trademarks.

Geographical indications (GIs). Requires administrative procedures for recognizing and opposing GIs, including guidelines for determining when a name is common. Also, for GIs that a Party protects through international agreements, includes requirements on transparency and opportunity to comment or oppose GI recognition.

- **Chemical-based (small-molecule) drugs:** provides five years of data exclusivity for new drugs, and three years for new formulations of existing drugs; and
- **Biologics:** the USMCA Protocol of Amendment removed a ten-year period of data exclusivity for biologic drugs originally negotiated in USMCA. U.S. law

provides 12 years of data exclusivity for biologics, while Canada provides a total of eight years of biologics exclusivity while Mexico provides a five-year exclusivity period for both chemical and biologics.⁷⁷

Copyrights

Copyrights provide creators of artistic and literary works with the exclusive right to authorize or prohibit others from reproducing, communicating, or distributing their works. USMCA attempts to balance copyright protections while protecting the free flow of information, and addresses digital trade through the following:

- **Extension of copyright terms.** Extends copyright terms from 50 years after death of the author, or 50 years from the publication (the WTO standard) to a 70-year period. Extends to 75-years corporate works. Among the USMCA parties, only Canada maintains the 50-year term.
- **Technological Protection Measures.** Prohibits circumventing technological protection measures (TPMs), such as encryption, or altering or disabling rights management information (RMI).
- **Limitation and Exceptions.** Confines “limitations and exceptions to “certain special cases that do not conflict with the normal exploitation of the work....and do not unreasonably prejudice the legitimate interests of the rights holder.” USMCA does not contain additional language that was in the TPP to “endeavor to achieve an appropriate balance” between users and rights holders in their copyright systems, including digitally, through exceptions for legitimate purposes (e.g., criticism, comment, news reporting, teaching, research). The “appropriate balance” language speaks to “fair use,” exceptions in copyright law for media, research, and teaching. Rights-holder groups have criticized such provisions in the FTA context, while open Internet groups sought to have the fair-use provision inserted into USMCA.
- **“Safe harbor.”** Protects internet service providers (ISPs) against liability for digital copyright infringement, provided ISPs address intermediary copyright liability through “notice and takedown” or alternative systems (e.g., “notice and notice” in Canada). Rights-holder groups sought to limit what they considered “overly broad safe harbor provisions,” while technology and business groups favored retention.

Trademarks

Trademarks protect distinctive commercial names, marks, and symbols. USMCA includes provisions on trademark protection and enforcement and provides for the following:

- **Sound and Scent Marks.** Extends trademark protection to sounds and requires “best efforts” to register scents. (Under NAFTA, a party could require that marks be “visually perceptible” in order to be registered.)
- **Certification and Collective Marks.** Provides trademark protections to “certification marks” (e.g., such as the Underwriters’ Laboratory or Good Housekeeping Seal) and adds protection for “collective marks.” Certification

⁷⁷ CRS Report R44489, *The Trans-Pacific Partnership (TPP): Key Provisions and Issues for Congress*, coordinated by Ian F. Fergusson and Brock R. Williams.

marks are usually given for “compliance with defined standards,” while collective marks are usually defined as “signs which distinguish the geographical origin, material, mode of manufacture or other common characteristics of goods or services of different enterprises using the collective mark.”⁷⁸

- **Well-known Trademarks.** Extends specific protections for “well-known marks” to dissimilar goods and services, whether or not registered, so long as the use of the mark would indicate a connection between the goods or services and the owner of the well-known mark and the trademark owner’s interests are likely to be damaged by the use.
- **Domain Names.** Requires each party to have a system for managing its country-code top level domains (ccTLDs) and to make available online public access to a database of contact information for domain-name registrants. USMCA requires parties to make available appropriate remedies when a person registers or holds, with “bad faith intent to profit,” a domain name that is identical or confusingly similar to a trademark. This provision is intended to protect against what is often referred to as “cybersquatting.”

Trade Secrets

Trade secrets are confidential business information (e.g., formula, customer list) that are commercially valuable. USMCA parties agreed to require criminal and civil procedures and penalties for trade secret theft, prohibition on impeding licensing of trade secrets, protections for trade secrets during the litigation process, and penalties for government officials who wrongfully disclose trade secrets, including through cyber theft and by state-owned enterprises (SOEs).

Geographical Indications (GIs)

GIs are geographical names that protect the quality and reputation of a distinctive product from a region (e.g., Ontario ice wine, Florida oranges). In FTA negotiations, the United States has sought to limit GI protections that can improperly constrain U.S. agricultural market access in other countries by protecting terms viewed as “common.” This goal may be complicated by the recent Comprehensive Economic and Trade Agreement (CETA) between Canada and the European Union, which provides additional protections for GIs in Canada. USMCA

- protects GIs for food products that Canada and Mexico have already accepted as a consequence of trade agreements with the European Union;
- provides transparency and notification requirements, and objection procedures, for new GIs; and
- sets forth guidelines to determine whether a term is customary in the common language.

IPR Enforcement

Like previous U.S. FTAs, the USMCA commits parties to provide civil, criminal, and other national enforcement for IPR violations, such as copyright enforcement in the digital environment, criminal penalties for trade secret theft and camcording, and *ex-officio* authority to

⁷⁸ For more information on these marks, see WIPO, “Certification Marks,” http://www.wipo.int/sme/en/ip_business/collective_marks/certification_marks.htm; and WIPO, “Collective Marks,” http://www.wipo.int/sme/en/ip_business/collective_marks/collective_marks.htm.

seize counterfeit trademark and pirated copyright goods at the border. The provisions of the chapter, in turn, are enforceable through the state-to-state dispute settlement chapter.

Cultural Exemption

Since the U.S.-Canada FTA, Canada has taken an exclusion on cultural industries from national treatment and MFN treatment. This exclusion reflects the Canadian government's attempts to promote a distinctly Canadian culture and the fear that, without its support, American culture would come to dominate Canada. Thus, the government imposes Canadian content ("Cancon") requirements on radio and television broadcasts, cable and satellite diffusion, the production of audio-visual material, film or video recording, and on various print media. The U.S. entertainment industry, in particular, has long sought to have this provision eliminated. In the end, Canada prevailed and the exclusion remains in USMCA, although a provision was inserted allowing the United States and Mexico to take reciprocal action.

State-Owned Enterprises (SOEs)

NAFTA includes provisions on SOEs, but they are limited in scope.⁷⁹ They allow parties to maintain or establish SOEs, while requiring that any enterprise owned or controlled by a federal, provincial, or state government must act in a manner consistent with that country's NAFTA obligations when exercising regulatory, administrative, or other government authority, such as the granting of licenses. NAFTA committed parties to ensure that any SOEs accord nondiscriminatory treatment in the sale of goods or services to another party's investment in that territory.

USMCA includes a new chapter on SOEs, requiring SOEs to act in accordance with commercial considerations and to provide nondiscriminatory treatment to other USMCA country firms. The provisions update NAFTA by ensuring that SOEs compete on a commercial basis, and that the advantages SOEs receive from their governments, such as subsidies, do not have an adverse impact on U.S. workers and businesses. The renegotiations addressed potential commercial disadvantages to private sector firms from state-supported competitors receiving preferential treatment.⁸⁰

U.S. government and business stakeholders raised concerns during the negotiations about competing with companies linked to the state through ownership or influence. As a result, they support new specific disciplines in USMCA to address such competition. Some legal analysts contend that USMCA limits the definition of expropriation so as to protect against "direct" expropriation only, and that it does not protect interests against indirect expropriation.⁸¹ Indirect expropriation occurs when a state's regulatory actions could take effective control of—or interfere with—an investment.

⁷⁹ The definition of a State-Owned Enterprise in the agreement is an enterprise principally engaged in commercial activities and in which a party's government directly or indirectly owns more than 50% of capital share, controls more than 50% of voting rights, holds the power to control the enterprise through any other ownership interest including indirect or minority ownership, or holds the power to select a majority of board members.

Labor

NAFTA marked the first time that worker rights provisions were associated with an FTA. NAFTA's labor provisions were in a side agreement containing 11 "guiding principles" pertaining to worker rights. Other provisions involved technical assistance, capacity building, and separate dispute procedures, along with a labor cooperation mechanism. Full dispute resolution procedures apply only to a country's "persistent pattern of failure" in trade-related cases to enforce its own laws regarding child labor, minimum wage, and occupational safety and health. Issues such as freedom of association and the right to organize are limited to ministerial consultations.

The rationale for including labor provisions in U.S. FTAs is to help ensure that countries not derogate from labor laws to attract trade and investment and that liberalized trade does not give a competitive advantage to developing countries due to a lack of adequate standards. Worker rights provisions in U.S. trade agreements have evolved significantly since NAFTA.⁸² More recent U.S. FTAs incorporated internationally recognized labor principles requiring parties to adopt and maintain in their statutes and regulations core labor principles of the International Labor Organization (ILO) (ILO Declaration). They also require countries to enforce their labor laws and not to waive or derogate from those laws to attract trade and investment. These provisions are enforceable under the same dispute settlement procedures that apply to other provisions of the FTA, and violations are subject to the same potential trade sanctions.

ILO Declaration on Fundamental Principles and Rights at Work (1998)

- freedom of association;
- effective recognition of the right to collective bargaining;
- elimination of all forms of compulsory or forced labor;
- effective abolition of child labor; and
- elimination of discrimination in respect of employment and occupation.

USMCA includes components of more recent U.S. FTAs that strengthen labor provisions and provide recourse to the same dispute settlement mechanism as other parts of the agreement. Unlike NAFTA, it requires parties to not only enforce their own laws, but also to adopt and maintain specific laws related to the ILO Declaration. It requires parties to

- adopt and maintain in statutes and regulation, and practices, worker rights as stated in the ILO Declaration of Rights at Work, in addition to acceptable conditions of work with respect to minimum wages, hours of work, and occupational safety and health;
- not waive or otherwise derogate from its statutes or regulations;
- not fail to effectively enforce labor laws through a sustained or recurring course of action or inaction in a manner affecting trade or investment between parties;
- promote compliance with labor laws through appropriate government action such as appointing and training inspectors or monitoring compliance and investigating suspected violations.

USMCA also prohibits imports of goods made by forced labor, and adds new commitments related to violence against workers, migrant worker protections, and workplace discrimination.

⁸² See CRS In Focus IF10046, *Worker Rights Provisions in Free Trade Agreements (FTAs)*, by Cathleen D. Cimino-Isaacs and M. Angeles Villarreal.

The agreement maintains language stating that each party retains the right to exercise reasonable enforcement discretion and to make *bona fide* decisions with regard to the allocation of enforcement resources provided that the exercise of that discretion is not inconsistent with the labor obligations. The agreement also states that nothing in the labor chapter shall be construed to empower a party's authorities to undertake labor law enforcement activities in the territory of another party.

USMCA Annex 23-A in the labor chapter commits Mexico to enact legislative action in regard to its labor laws, similar to the May 2019 reforms, specifying that absent such action a delay in USMCA's entry into force could be possible. Specifically, Annex-23A commits Mexico to

- eliminate all forms of forced or compulsory labor;
- protect the right of workers to organize, form, and join the union of their choice;
- prohibit employer interference in union activities, discrimination, or coercion against workers;
- provide for the exercise of a personal, free, and secret vote of workers for union elections and agreements;
- establish and maintain independent and impartial bodies to register union elections and resolve disputes relating to collective bargaining agreements; and
- establish independent labor courts.

While Mexico enacted these labor law reforms in 2019, and undertook constitutional reforms in the past, several Members of Congress remained concerned about Mexico's ability to fully implement and enforce its laws. They argued that the original text of the USMCA on labor and dispute settlement was not strong enough to protect worker rights and they negotiated with the Administration to amend the agreement. Key changes in the amended USMCA include the following:

- Prevention of panel blocking in the Dispute Settlement Chapter of USMCA. Ensures the formation of a panel in dispute cases where a party refuses to participate in the selection of panelists.
- "In a Manner Affecting Trade and Investment." Shifts the burden of proof by stating that an alleged violation affects trade and investment, unless otherwise demonstrated.
- Rapid Response Mechanism. Adds a new rapid response mechanism to provide for an independent panel investigation of denial of certain labor rights at "covered facilities," as opposed to a government inspection.
- Mexico's Labor Reform Monitoring. USMCA implementing legislation creates a new interagency committee, labor attachés, and reporting requirements to Congress on Mexico's implementation of labor reforms.
- New or amended provisions on Rules of Procedure for dispute settlement, forced labor, and violence against workers.

Environment

NAFTA was the first U.S. FTA to include a side agreement related to the environment. As with the chapter on labor, environment provisions in U.S. FTAs have evolved significantly over time. The NAFTA side agreement—the North American Agreement on Environmental Cooperation (NAAEC)—required all parties to enforce their own environmental laws, and contains an

enforcement mechanism applicable to a party's failure to enforce these laws. NAAEC included a consultation mechanism for addressing disputes with a special dispute settlement procedure. Subsequent FTAs included a similar environmental chapter within the main text of the agreement, including a country's obligations to enforce their own laws.⁸³

More recent U.S. FTAs added an affirmative obligation for FTA partner countries to adhere to multilateral environmental agreements (MEAs) and allowed for environmental disputes under the FTAs to access the main dispute settlement provisions of the agreement. These obligations generally were reflected in the TPA-2015 negotiating objectives. The USMCA environment chapter obligates each party to

- not fail to effectively enforce its environmental laws through a sustained or recurring course of action or inaction to attract trade and investment;
- not waive or derogate from such laws in a manner that weakens or reduces the protections afforded in those law to encourage trade or investment;
- ensure that its environmental laws and policies provide for and encourage high levels of protection;
- strive to improve its levels of environmental protection;
- require parties to adopt and maintain statutes and regulations consistent with multilateral environmental agreements to which each is a party;
- recognize the sovereign right of each party to establish its own levels of domestic environmental protection, its own regulatory priorities, and to adopt or modify its priorities accordingly;
- acknowledge a party's right to exercise discretion with regard to enforcement resources;
- provide for the resolution of disputes; and
- provide a mechanism to implement the agreement.

USMCA directly or implicitly addresses obligations under major Multilateral Environmental Agreements (MEAs). It also includes obligations and encouragements to protect the ozone layer, protect the marine environment from ship pollution, encourage conservation and sustainable use of biodiversity, encourage sustainable fisheries management and requires the control, reduction, and eventual elimination of subsidies that lead to overfishing or overcapacity. The USMCA does not contain language on climate change.

The Protocol of Amendment to USMCA clarified some of the existing language in the agreement and addressed some perceived shortcoming in the original USMCA text, such as

- Asserting the presumption that an environmental dispute affects trade and investment unless a respondent party can prove otherwise.
- Requiring each party specifically to adopt, maintain, and implement laws, regulations and other measures to fulfill the following MEAs to which they are a party:
 - Convention on International Trade in Endangered Species of Wild Flora and Fauna (CITES)
 - Montreal Protocol on Substances that Deplete the Ozone Layer

⁸³ For more information, see CRS In Focus IF10166, *Environmental Provisions in Free Trade Agreements (FTAs)*, by Richard K. Lattanzio and Ian F. Fergusson.

- International Convention for the Prevention of Pollution from Ship (MARPOL)
- Ramsar Convention on Wetlands
- Convention on Antarctic Marine Living Resources
- International Whaling Convention
- Inter-American Tropical Tuna Convention

The USMCA, as originally signed, only made explicit reference to CITES, MARPOL, and the Montreal Protocol. USMCA implementing legislation will create an Interagency Environment Committee for Monitoring and Enforcement, analogous to the labor chapter, and establishes environment-focused attachés in Mexico City to monitor compliance with the agreement. In addition, the implementing legislation includes measures for authorizing grants under the U.S.-Mexico Border Water Infrastructure Program, the Trade Enforcement Trust Fund and a recapitalization of the North American Development Bank (NADB).

Dispute Settlement

NAFTA and other U.S. FTAs, as well as the WTO, provide for the resolution of disputes arising under the agreement. These provisions are in addition to procedures with regard to investor-state dispute resolution (see “Investor-State Dispute Settlement”). The USMCA dispute settlement provisions are designed to resolve disputes in a cooperative manner. A party first seeks redress of a grievance through a request for consultation with the other party. These steps include

- initial consultations between the parties;
- good offices, conciliation, or mediation; and (if no resolution),
- establishment of a dispute settlement panel.

Panels are composed of five members, of whom each side appoints two. A chair is appointed by mutual consent of the parties. Failing that, the disputing party selected by lot makes the decision. After the panel renders its decision, the unsuccessful party is expected to remedy the measure or practice under dispute. If it does not, the aggrieved party may seek compensation, suspension of benefits, or fines. In cases in which a dispute is common to both WTO and FTA rules, a party can choose the forum in which to bring the dispute (i.e., at the WTO or before a NAFTA panel), but cannot bring the dispute to multiple fora.

Under NAFTA, only three state-to-state dispute resolution panels were completed (between 1994 and 2001). Because the United States was able to block a panel chair, a fourth case (Restrictions on Sugar from Mexico) was never considered. The ability of a party to block a panel chair—and, consequently, a panel—from forming exposed an issue in the panel selection process, which has not been used since.

The protocol of amendment addressed the panel blocking issue by inserting language that would eliminate the ability of a responding party to block the establishment of a panel through refusal to participate in the panel establishment procedure. It revised the guidelines for the Rules of Procedure for panels to give the parties the right to submit testimony, the right to test the veracity of submitted testimony, the right to submit anonymous testimony, and for the panel to accept agreed stipulations prior to a hearing, among other issues. In order to speed up dispute settlement, the amendment eliminated the consultative role of the USMCA Free Trade Commission, which acts as a secretariat for the agreement, as an intermediate step to resolve disputes.

In addition, some chapters or sections are not subject to dispute settlement including the

- Good Regulatory Practices chapter;
- Competition Policy chapter;
- Competitiveness chapter;
- Small and Medium-Sized Enterprise chapter;
- Transparency and Procedural Fairness for Pharmaceutical Products and Medical Devices section of the Publications and Administration chapters; and
- Macroeconomic Policies and Exchange Rate Matters Chapter other than transparency and reporting obligations that have not been resolved through consultations.

Binational Review Panels for Trade Remedies

Unlike other U.S. FTAs, NAFTA contained a binational dispute settlement mechanism, which USMCA retained. USMCA provides disciplines for settling disputes arising from a party's statutory amendment of its antidumping (AD) or countervailing duty (CVD) laws, or from a party's AD or CVD final determination⁸⁴ on the goods of an exporting party. The dispute settlement system originated during the Canada-United States Free Trade Agreement (CUSFTA) and it was retained under NAFTA. It was a priority negotiating issue for the Canadian government.

The binational panel mechanism provides for a review of USMCA parties' final administrative determinations in AD/CVD investigations in lieu of judicial review in domestic courts. In cases in which an aggrieved USMCA country maintains that a partner did not preserve "fair and predictable disciplines on unfair trade practices," or asserts that a partner's amendment to its AD or CVD law is inconsistent with the WTO Antidumping or Subsidies Agreements,⁸⁵ the aggrieved partner may request a judgment from a binational panel rather than through the legal system of the defending party.⁸⁶

NAFTA Chapter 19 Panels Involving the United States

As of February 26, 2020, Chapter 19 panels have reviewed 156 cases. The United States and its industries have been a party to 91% of all Chapter 19 panel reviews (142 panels), as either the importing or exporting country. In 70% of these panels (110 panels), the United States was the importing country and investigating authority. In these 110 cases, panels reviewed 55 U.S. decisions regarding U.S. imports from Canada and 55 U.S. decisions regarding U.S. imports from Mexico. Panels issued a ruling in one-third of these cases. Nearly two-thirds of the cases were terminated by one or both of the parties before the panel made a determination.

As the exporting country, U.S. industries requested 40 panel reviews of another party's investigatory decisions. These panels included 20 reviews of Canadian decisions and 20 of Mexican decisions. Nearly two-thirds (26) of

⁸⁴ In Canada, AD/CVD investigations on imports are conducted by the Canada Border Services Agency (CBSA, which makes dumping and subsidy determinations) and the Canadian International Trade Tribunal (CITT, which determines injury to Canadian industries). In Mexico, both injury (i.e., to Mexican industries) and dumping/subsidy determinations are made by the Secretaría de Economía, Unidad de Prácticas Comerciales Internacionales. U.S. injury determinations are made by the International Trade Commission (ITC), and the International Trade Administration of the Department of Commerce investigates and determines the existence and amount of dumping/subsidies.

⁸⁵ The WTO Antidumping Agreement's official title is the *Agreement on the Implementation of Article VI of the General Agreement on Tariffs and Trade*; and the Subsidies Agreement's title is the *Agreement on Subsidies and Countervailing Measures*. NAFTA pre-dated the entry-into-force of the agreement establishing the WTO by one year. At the time of the NAFTA negotiations, the multilateral General Agreements on Tariffs and Trade (GATT) was in force. The GATT was incorporated with revisions into the WTO agreements.

⁸⁶ CRS In Focus IF10645, *Dispute Settlement in the WTO and U.S. Trade Agreements*, by Ian F. Fergusson.

these panels completed their review and issued a ruling. The remaining one-third (14) were terminated by one or both of the involved parties before the panel ruled.

Source: Evaluated and compiled by CRS using information from the NAFTA Secretariat, available at <https://www.nafta-sec-alena.org/Home/Dispute-Settlement>.

The Trump Administration sought to eliminate the Chapter 19 dispute settlement mechanism during the USMCA negotiations.⁸⁷ By contrast, Canada and Mexico expressed support for retaining the mechanism, with Canada drawing a “red line” firmly opposing its elimination.⁸⁸ At the end of the negotiations, the three countries decided to retain the system. NAFTA Chapter 19 is effectively replicated in the Trade Remedies Chapter of the USMCA.

Currency Manipulation

NAFTA did not have provisions related to currency manipulation. For the first time in a U.S. trade agreement, USMCA includes obligations to guard against currency manipulation. The parties agreed to “achieve and maintain a market-determined exchange rate regime,” and to “refrain from competitive devaluation, including through intervention in the foreign exchange market.” However, only transparency and reporting requirements are subject to dispute settlement procedures.

The June 2015 TPA included, for the first time, a principal trade negotiating objective addressing currency manipulation. While neither Canada nor Mexico have been accused of currency manipulation in the past, the inclusion of a currency manipulation chapter could serve as a precedent for including such provisions in future FTAs. Over the past decade, some Members of Congress and policy experts have been concerned that foreign countries may use exchange rate policies to gain an unfair trade advantage against the United States, or are “manipulating” their currencies. Specifically, the concern is that other countries may purposefully undervalue their currencies to boost exports, making it harder for other countries to compete in global markets. They argue that U.S. companies and jobs have been adversely affected by the exchange rate policies adopted by China, Japan, and other countries “manipulating” their currencies.⁸⁹ Some economists are skeptical about currency manipulation and whether it is a significant problem. They raise questions about whether government policies have long-term effects on exchange rates, whether it is possible to differentiate between “manipulation” and legitimate central bank activities, and the net effect of alleged currency manipulation on the U.S. economy.⁹⁰

Regulatory Practices

Nontariff barriers, including discriminatory and unpredictable regulatory processes, can be an impediment to market access for U.S. goods and services exports. NAFTA included broad provisions on regulatory practices in several chapters, including the Customs Procedures, Financial Services, and Energy chapters, but does not have a specific chapter on regulatory practices. NAFTA may have influenced the United States, Canada, and Mexico to increase

⁸⁹ See CRS In Focus IF10049, *Debates over Currency Manipulation*, by Rebecca M. Nelson, and CRS Report R44717, *International Trade and Finance: Overview and Issues for the 115th Congress*, coordinated by Mary A. Irace and Rebecca M. Nelson.

⁹⁰ *Ibid.*

cooperation on economic and security issues through various endeavors such as the North American Leaders' Summits, the North American Trusted Traveler Program, the U.S.-Canada Beyond the Border Action Plan, and the U.S.-Mexico High Level Regulatory Cooperation Council.⁹¹

USMCA has a new, separate chapter on regulatory practices with commitments to promote regulatory quality through greater transparency, objective analysis, accountability, and predictability to facilitate international trade, investment, and economic growth. The chapter states that the application of good regulatory practices can support the development of compatible regulatory approaches among the parties, and reduce or eliminate unnecessarily burdensome, duplicative, or divergent regulatory requirements. Such commitments could complement ongoing efforts and include increased transparency in the development and implementation of proposed regulations, opportunities for public comment in the development of regulations, and/or the use of impact assessments and other methods to ensure regulations are evidence-based and current.⁹²

Trucking

The implementation of NAFTA trucking provisions was a major trade issue between the United States and Mexico for many years because the United States delayed its trucking commitments. NAFTA provided Mexican commercial trucks full access to four U.S.-border states by 1995 and full access throughout the United States by 2000. The two countries cooperated to resolve the issue over time and engaged in numerous talks regarding safety and operational issues. By 2015, the trucking issue had been resolved.

USMCA generally retains NAFTA trucking provisions. NAFTA granted Mexican commercial trucks authority to operate in the United States, but they cannot operate between two points within the country. This means that they can haul cross-border loads but cannot haul loads that originate and end in the United States. USMCA caps the number of Mexican-domiciled carriers that can receive U.S. operating authority and continues the prohibition on Mexican-based carriers hauling freight between two points within the United States. Mexican carriers that already have authority under NAFTA to operate in the United States will continue to be allowed to operate in the United States.

Anticorruption

The United States has been influential in including commitments to combat corruption in international trade into its FTAs by incorporating chapters on transparency and anticorruption into the agreements. Although it has been part of U.S. policy for many years, the use of these types of provisions has evolved over time with anticorruption commitments becoming progressively stronger.⁹³ NAFTA does not include a separate chapter related to transparency or anticorruption, but it does include several provisions that were considered groundbreaking at the time, including binding rules and disciplines on and removal of barriers to foreign investment. It was not until the proposed TPP that anticorruption provisions were specifically included as a U.S. FTA chapter. Earlier agreements such as the U.S.-Chile FTA included anticorruption provisions related to government procurement, but none in the transparency chapter.

⁹¹ See section on North American Cooperation in CRS Report 96-397, *Canada-U.S. Relations*, by Ian F. Fergusson and Peter J. Meyer.

⁹² USTR, *Summary of Objectives for the NAFTA Renegotiation*, July 17, 2017, p. 7.

⁹³ Transparency International, "Anti-Corruption and Transparency Provisions in Trade Agreements," *Anti-Corruption Helpdesk*, 2017.

In the NAFTA renegotiations, both the United States and Mexico included anticorruption provisions in their negotiating objectives. USMCA has a new chapter on anti-corruption in which the parties affirm their resolve to prevent and combat bribery and corruption in international trade and investment. The scope of the chapter is limited to measures to prevent and combat bribery and corruption in regard to any matter covered by the agreement.

“Sunset” Provision in Review and Term Extension

In the Final Provisions chapter of USMCA, parties commit to a review of the agreement on the sixth anniversary of the agreement’s entry into force. If all parties agree to continue the agreement after six years, it shall remain in force for another 16 years. If a party does not confirm its wish to extend the term of the agreement for another 16-year period, parties shall conduct a joint review of the agreement every year. The agreement only specifies that a “party” would review the agreement; it does not state whether it would be the President or Congress that reviews the agreement. This may be of interest to Congress as it considers what its role would be in reviewing the USMCA and in the next authorization of TPA. Some industry observers contend that the sunset provision may have a detrimental effect on investor confidence and affect long-term investments. Others believe that the provision will not have an effect as parties can choose to review an agreement at any time.

Issues for Congress

Policymakers faced numerous significant issues in the debate and approval of USMCA. Key issues Congress examined included the modernized provisions of the agreement, the role of the Congress and the President in the NAFTA renegotiation, whether the agreement made progress in advancing TPA’s negotiating objectives, the possible economic impact, especially in the auto industry, and how the agreement may impact U.S. relations with Canada and Mexico, two of the United States’ largest trading partners. Some lawmakers believed that the renegotiations resulted in a positive outcome on balance that will enhance relations with NAFTA partners through a modernized agreement. Other lawmakers expressed concerns about specific aspects of the agreement, including labor, investment, and IPR, and some Members negotiated with the Trump Administration to amend the agreement. What follows are a few selected areas of potential congressional interest.

Congressional Oversight Role and Key Changes to USMCA

USMCA contains key significant changes from past U.S. FTAs, including ISDS, labor and the environment, rules of origin for motor vehicles and parts, government procurement, and the sunset provision to review the agreement after six years. Congress may examine these issues more closely in terms of whether they should be a model for future agreements. Although numerous policymakers contend that USMCA contains groundbreaking provisions such as those on labor enforcement and the environment, others believe that USMCA rolls back liberalization commitments in previous U.S. FTAs and will result in diminishing free trade instead of liberalizing it.⁹⁴

Congress may consider an oversight role on implementation of these and other provisions. For example, policymakers may continue to examine whether labor provisions in FTAs, such as

⁹⁴ See for example, Senator Pat Toomey, “I’ll Vote Against This Antitrade Agreement,” Op-Ed, *Wall Street Journal*, December 19, 2019.

USMCA, are effective in enhancing worker rights. Organized labor in the United States has long argued that labor enforcement in trade agreements needs to be strengthened in order to protect U.S. workers, but others argue that domestic policy might be “the most direct, and most effective, way to improve workers’ lot, especially in advanced countries like the United States.”⁹⁵ The motor vehicle auto rules of origin raise other issues. As stated earlier, economic studies and industry observers have concluded that the more restrictive rules of origin on autos and auto parts may result in higher prices, lower U.S. exports, and adversely affect U.S. and Mexican auto employment. Policymakers may monitor the effects of USMCA on the North American motor vehicle industry as the new rules of origin are implemented. As noted above, the USMCA will remove bilateral U.S. government procurement (GP) obligations with regard to Canada. GP obligations continue under the WTO Government Procurement Agreement (GPA), but if the United States withdraws from the GPA,⁹⁶ the issue of the value of open government procurement versus Buy American policies may come to the fore. Disagreement over the value and content of Investor-State Dispute Settlement (ISDS) and whether it should or should not be included in future trade agreements likely will persist despite their restriction in USMCA.

Roles of Congress and the President in NAFTA Renegotiations

Under Trade Promotion Authority, if the President “makes progress in meeting” TPA’s principal trade negotiating objectives and meets various consultative, notification, and reporting requirements before, during, and after the conclusion of negotiations, Congress shall provide expedited procedures for automatic introduction of the implementing bill submitted by the President, a timetable for guaranteed committee consideration and discharge, floor consideration, prohibition of amendments, and limitation on debate. The process from introduction must be completed within 90 days. USMCA was ultimately considered and approved under TPA procedures well within the 90-day deadline. Some Members of Congress expressed concerns about the path USMCA took to ratification, stating that the final agreement was not negotiated under TPA procedures, which could set an undesirable precedent for future trade agreements.⁹⁷

TPA’s requirement that the President fulfill consultation, notification and reporting obligations helps preserve the congressional role in trade agreements by giving Congress the opportunity to influence the agreement before it is finalized. Some in Congress expressed interest in the extent to which the President advanced U.S. negotiating objectives in TPA, as approved by Congress in 2015, given several notable breaks in USMCA with the contents of previous U.S. FTAs.

President Trump indicated in the early phase of NAFTA renegotiations that he would consider withdrawing from NAFTA as a means of pressuring Congress to support timely action on implementing legislation. It was not clear, though, whether the President had the legal authority for withdrawing from an agreement without the consent of Congress. If President Trump attempted to withdraw from the agreement, it is possible that Congress would have attempted to challenge or delay the effort. The question of who has the authority to terminate NAFTA, a congressional-executive agreement, has been debated by lawmakers, legal experts, and others.⁹⁸

Lawmakers may choose to clarify language for withdrawing from an agreement in future authorizations of TPA.

Economic and Broader Considerations

Congress reviewed the economic effects of a USMCA and the broader strategic implications of possible withdrawal from NAFTA absent action on legislation to implement the USMCA. The United States shares strong economic ties with Mexico and Canada. Any disruption to the economic relationship could have adverse effects on investment, employment, productivity, and North American competitiveness. In addition, Mexico and Canada could consider imposing retaliatory tariffs on U.S. exports if the United States were to withdraw, while at the same time maintaining existing and pursuing new FTAs without the United States.

The full effects of the USMCA on North American trade relations are not be expected to be significant because nearly all U.S. trade with Canada and Mexico that meets rules of origin requirements is now conducted duty and barrier free under NAFTA. The USMCA would maintain NAFTA's tariff and non-tariff barrier eliminations. Many economists and other observers believe that USMCA is not expected to have a measurable effect on U.S. trade and investment with Mexico or Canada, jobs, wages, or overall economic growth, and that it would probably not have a measurable effect on the U.S. trade deficit.⁹⁹ The U.S. International Trade Commission (ITC) conducted an investigation into the likely economic impacts of the USMCA, a required element of the Trade Promotion Authority (TPA) process.¹⁰⁰ The ITC study, published in April 2019, stated that the elements of USMCA that would have the most significant effects on the U.S. economy are those related to digital trade and the new rules of origin applicable to the automotive sector. USMCA's new international data transfer provisions, absent in NAFTA, are expected to positively impact industries that rely on such data transfers. The new more restrictive, auto rules of origin may result in an increase in U.S. production but also lead to a small increase in prices and a small decrease in the consumption of vehicles in the United States. Overall, according to the ITC report, USMCA is expected to have a minimal, but positive effect on the overall U.S. economy.¹⁰¹

Some analysts believe that the updated auto rules of origin requirements contained in the USMCA could raise compliance and production costs and could lead to higher prices, which could possibly negatively affect U.S. vehicle sales. The net impact, however, may be more limited depending on the capacity of U.S. automakers and parts manufacturers to shift suppliers and production locations and the ability to absorb higher costs, according to some observers.¹⁰² Some observers contend that manufacturers with a stronger presence in Mexico, such as General Motors and Fiat Chrysler Automobiles, may be more impacted.¹⁰³

Other observers and stakeholders are continuing to review the provisions in the new agreement and what effect, if any, these changes would have on U.S. economic relations with Canada and Mexico. To some analysts, provisions in areas such as customs regulation, digital trade, sanitary and phytosanitary measures, and enforcement on labor and the environment are considered an

¹⁰² Nick Lichtenberg, "USMCA 'Manageable' Changes Auto Compliance, Production Costs: Moody's," *Bloomberg First Word*, October 10, 2018.

¹⁰³ *Ibid.*

improvement over similar provisions in NAFTA. Some lawmakers, however, do not agree with these USMCA provisions stating that they do not protect workers or do not meet TPA negotiating objectives.¹⁰⁴ Other new USMCA provisions, such as largely heightened IPR protections and generally less extensive investment provisions, have both supporters and detractors. For example, there is some concern that the ISDS provisions in the USMCA effectively may only apply to certain U.S. contracts in Mexico's energy sector and possibly leave out other sectors such as services. Under USMCA, investors in many sectors would be limited to filing ISDS claims for breaches of national treatment, most-favored nation treatment, or expropriation, but not indirect expropriation.

Outlook

USMCA will replace NAFTA once it enters into force. Before USMCA may enter into force, all three countries must ratify the agreement. Mexico was the first party to ratify the agreement in June 2019 and the first party to approve the amended USMCA on December 12, 2019. The United States ratified the agreement when President Trump signed the USMCA implementing legislation into law on January 29, 2020 (P.L. 116-113). Canada is expected to ratify the agreement in the next few months.

At least 30 days prior to USMCA's entry into force, the President must notify Congress that he has determined that the other parties have taken the necessary legal and regulatory measures to comply with their commitments under the agreement.¹⁰⁵ Such measures include laws or regulations regarding rules of origin, tariffs, panel rosters related to dispute resolution, establishing committees such as the one called for in the chapter on small and medium-sized enterprises, labor law implementation in Mexico, among others. Some of these measures may take a number of months or even longer. For example, the United States may take steps to ensure that Mexico is fully implementing its labor reforms to protect workers' union rights. Modifications in the rules of origin in the motor vehicle industry may also take some time to put into effect in all three countries. After all parties have the necessary legal and regulatory measures in place to meet their USMCA commitments, the agreement will enter into force "on the first day of the third month following the last notification."¹⁰⁶ The United States will likely focus on making sure that Mexico complies with its major labor and environmental commitments, which could take several months or longer. USMCA parties may take as much time as they need to meet their obligations.¹⁰⁷
