Defense Primer: Geography, Strategy, and U.S. Force Design

World geography is an influence on U.S. strategy, which in turn helps shape the design of U.S. military forces.

World Geography and U.S. Strategy

Most of the world's people, resources, and economic activity are located not in the Western Hemisphere, but in the other hemisphere, particularly Eurasia. In response to this basic feature of world geography, U.S. policymakers for the last several decades have chosen to pursue, as a key element of U.S. national strategy, a goal of preventing the emergence of regional hegemony in Eurasia. This objective reflects a U.S. perspective on geopolitics and grand strategy developed by U.S. strategists and policymakers during and in the years immediately after World War II that incorporates two key judgments:

- that given the amount of people, resources, and economic activity in Eurasia, a regional hegemon in Eurasia would represent a concentration of power large enough to be able to threaten vital U.S. interests; and
- that Eurasia is not dependably self-regulating in terms of preventing the emergence of regional hegemony, meaning that the countries of Eurasia cannot be counted on to be fully able to prevent, through their own choices and actions, the emergence of regional hegemony, and may need assistance from one or more countries outside Eurasia to be able to do this dependably.

Preventing the emergence of regional hegemony in Eurasia is sometimes also referred to as preserving a division of power in Eurasia, or as preventing key regions in Eurasia from coming under the domination of a single power, or as preventing the emergence of a spheres-of-influence world, which could be a consequence of the emergence of one or more regional hegemony in Eurasia. The Trump Administration's December 2017 national security strategy document states that the United States "will compete with all tools of national power to ensure that regions of the world are not dominated by one power."

Although U.S. policymakers do not often state explicitly in public the goal of preventing the emergence of regional hegemony in Eurasia, U.S. military operations in World War I and World War II, as well as numerous U.S. military wartime and day-to-day operations since World War II (and nonmilitary elements of U.S. national strategy since World War II), appear to have been carried out in no small part in support of this goal.

U.S. Strategy and Force Design

The goal of preventing the emergence of regional hegemony in Eurasia is a major reason why the U.S. military is structured with force elements that enable it to deploy from the United States, cross broad expanses of ocean and air

space, and then conduct sustained, large-scale military operations upon arrival in Eurasia or the waters and airspace surrounding Eurasia. Force elements associated with this objective include, among other things:

- An Air Force with significant numbers of long-range bombers, long-range surveillance aircraft, and aerial refueling tankers.
- A Navy with significant numbers of aircraft carriers, nuclear-powered (as opposed to non-nuclear-powered) attack submarines, large surface combatants, large amphibious ships, and underway replenishment ships.
- Significant numbers of long-range Air Force airlift aircraft and Military Sealift Command sealift ships for transporting ground forces personnel and their equipment and supplies rapidly over long distances.

Consistent with a goal of being able to conduct sustained, large-scale military operations in Eurasia or the oceans and airspace surrounding Eurasia, the United States also stations significant numbers of forces and supplies in forward locations in Europe, the Persian Gulf, and the Indo-Pacific.

Comparing U.S. Forces to Other Countries' Forces

The United States is the only country in the world that designs its military to depart one hemisphere, cross broad expanses of ocean and air space, and then conduct sustained, large-scale military operations upon arrival in another hemisphere. The other countries in the Western Hemisphere do not design their forces to do this because they cannot afford to, and because the United States is, in effect, doing it for them. Countries in the other hemisphere do not design their forces to do this for the very basic reason that they are already in the other hemisphere, and consequently instead spend their defense money primarily on forces that are tailored largely for influencing events in their own local regions of that hemisphere. (Some countries, such as Russia, China, the United Kingdom, and France, have an ability to deploy forces to distant locations, but only on a much smaller scale.)

The fact that the United States designs its military to do something that other countries do not design their forces to do can be important to keep in mind when comparing the U.S. military to the militaries of other nations. For example, the U.S. Navy has 11 aircraft carriers while other countries have no more than one or two. Other countries do not need a significant number of aircraft carriers because, unlike the United States, they are not designing their forces to cross broad expanses of ocean and air space and then conduct sustained, large-scale military aircraft operations upon arrival in distant locations.

As another example, it is sometimes noted, in assessing the adequacy of U.S. naval forces, that U.S. naval forces are equal in tonnage to the next several navies combined, and that most of those several navies are the navies of U.S. allies. Those other fleets, however, are mostly of Eurasian countries, which do not design their forces to cross to the other side of the world and then conduct sustained, large-scale military operations upon arrival in distant locations. The fact that the U.S. Navy is much bigger than allied navies does not necessarily prove that U.S. naval forces are either sufficient or excessive; it simply reflects the differing and generally more limited needs that U.S. allies have for naval forces. (It might also reflect an underinvestment by some of those allies to meet even their more limited naval needs.)

Measuring the Sufficiency of U.S. Forces

Countries have differing needs for military forces. The United States, as a country located in the Western Hemisphere with a goal of preventing the emergence of regional hegemony in Eurasia, has defined a need for military forces that is quite different from the needs of countries that are located in Eurasia. The sufficiency of U.S. military forces consequently is best assessed not through comparison to the militaries of other countries (something that is done quite frequently), but against U.S. strategic goals, which in turn reflect U.S. policymaker judgments about the U.S. role in the world.

Strategy Is a Policy Choice, Force Design Is a Consequence

The fact that U.S. policymakers for the last several decades have chosen to pursue, as a key element of U.S. national strategy, a goal of preventing the emergence of regional hegemony in Eurasia, does not necessarily mean that this goal was a correct one for the United States to pursue, or that it would be a correct one for the United States to pursue in the future. Whether it would be a correct one for the United States to pursue in the future would depend on policymaker views regarding the two key judgments outlined earlier.

The Biden Administration may choose to review the question of whether the United States should continue to pursue, as a key element of U.S. national strategy, a goal of preventing the emergence of regional hegemony in Eurasia. A decision on whether to continue pursuing such a goal

would then influence U.S. military force design for the future.

January 19, 2021, Testimony by Lloyd Austin

At a January 19, 2021, hearing before the Senate Armed Services Committee on the nomination of retired General Lloyd Austin to be Secretary of Defense, Senator Angus King asked Austin: “What do you believe China’s strategic goals are? Are they looking to be the dominant world power or regional hegemon? An economic power? What is their—what are their goals?” Austin replied (emphasis added): “Yeah, I think it’s all of that. **They’re already a regional hegemon** and I think their goal is to be a dominant world power.”
