Market-Based Greenhouse Gas Emission Reduction Legislation: 108th Through 117th Congresses

Congressional interest in market-based greenhouse gas (GHG) emission control legislation has fluctuated over the past 20 years. Market-based approaches that would address GHG emissions typically involve either a cap-and-trade system or a carbon tax or emissions fee program. Both approaches would place a price—directly or indirectly—on GHG emissions or their inputs, namely fossil fuels. Both would increase the price of fossil fuels, and both would reduce GHG emissions to some degree. Both would allow covered entities to choose the best way to meet their emission requirements or reduce costs, potentially by using market forces to minimize national costs of emission reductions. Preference between the two approaches ultimately depends on which variable policymakers prefer to precisely control—emission levels or emission prices.

A primary policy concern with either approach is the economic impacts that may result. Expected energy price increases could have both economy-wide impacts (e.g., on the U.S. gross domestic product) and disproportionate effects on specific industries and particular demographic groups. The degree of these potential effects would depend on a number of factors, including the magnitude, design, and scope of the program and the use of tax or fee revenues or emission allowance values.

As the figure below illustrates, between the 108th and 111th Congresses, most of the introduced bills would have established cap-and-trade systems. Between the 112th and 117th Congresses, most of the introduced bills would have established carbon tax or emissions fee programs. The proposals ranged in the scope of emissions covered from CO₂ emissions from fossil fuel combustion to multiple GHG emissions from a broader array of sources. In addition, the proposals differed by how, to whom, and for what purpose the fee revenues or allowance value would be applied. Some economic analyses indicate that policy choices to distribute the tax, fee, or emission allowance revenue would yield greater economic impacts than the direct impacts of the carbon price.

Number and Type of Introduced GHG Emission Reduction Bills
108th Congress through 117th Congress

Source: Prepared by CRS.

Notes: “Other Approaches” include (1) proposals that did not specify the overall framework but would have authorized EPA to establish a GHG emission reduction program and (2) proposals that combine elements from a cap-and-trade system with price control features in a carbon tax or emissions fee system, sometimes described as hybrid approaches.

This report includes a separate table for each Congress, comparing GHG emission reduction legislation by the following characteristics:

- **General framework:** the proposed program structure and scope in terms of emissions covered, multiple GHG emissions, or just carbon dioxide (CO₂) emissions.
- **Covered entities/materials:** a list of the industries, sectors, or materials that would be subject to the program.
- **Emissions limit or target:** the GHG or CO₂ emissions target or cap for a specified year.
- **Distribution of allowance value or tax revenue:** how emission allowance value or carbon tax or fee revenue would be distributed.
- **Offset and international allowance treatment:** the degree to which offsets and international allowances could be used for compliance purposes and the types of offset activities that would qualify.
- **Mechanism to address carbon-intensive imports:** a U.S. GHG reduction program may create a competitive disadvantage for some domestic businesses, particularly carbon-intensive, trade-exposed industries.
- **Additional GHG reduction measures:** other mechanisms designed to further reduce GHG emissions that are not covered in the central program.

Introduction

Human activities, particularly fossil fuel combustion and industrial operations, have raised the atmospheric concentration of carbon dioxide (CO₂) and other greenhouse gases (GHGs) since the late 1700s—for example, CO₂ has increased by over 40%.¹ Almost all climate scientists agree that these GHG increases have contributed to a warmer climate today and that, if they continue, they will contribute to future climate change.² Although a range of actions that seek to reduce GHG emissions are currently under way or being developed on the international³ and subnational level (e.g., individual state actions or regional partnerships),⁴ federal policymakers and stakeholders have different viewpoints over what, if anything, to do about future climate change and related impacts.

Congressional interest in GHG emission control legislation has fluctuated over the last 20 years. A number of proposals to limit GHG emissions have focused on market-based approaches, such as a GHG emission cap-and-trade program or a GHG emissions tax (often referred to as a carbon tax) or fee. In general, a market-based approach would place a price on GHG emissions (e.g., through an emissions cap or emission tax or fee), allowing covered entities to determine their pathway of compliance.⁵ This report focuses on these types of approaches to address GHG emissions.

Other approaches include a range of policy options, including performance-based or technology-based standards (e.g., best available control technology), public investment in research and development, and tax policies.⁶ Although not discussed in this report, Members have introduced multiple, nonmarket-based proposals that would have likely resulted in reductions in GHG emissions. Several of these proposals were enacted, including tax incentives to promote

² For the latest U.S. assessment of the human contribution to climate change, see Intergovernmental Panel on Climate Change, *Global Warming of 1.5°C, Special Report*, 2018; and U.S. Global Change Research Program, *Fourth National Climate Assessment, vol. II: Impacts, Risks, and Adaptation in the United States*, 2018. See also CRS Report R45086, *Evolving Assessments of Human and Natural Contributions to Climate Change*, by Jane A. Leggett.

³ Some countries have levied carbon taxes (or something similar) for over 20 years. For a review of carbon prices in other countries, see World Bank, *State and Trends of Carbon Pricing 2020*, <https://openknowledge.worldbank.org/handle/10986/33809>. The European Union established a cap-and-trade program in 2005 and covers emissions from the electricity sector, selected energy-intensive industries, and aviation. See, for example, Climate Action Tracker, <https://climateactiontracker.org>; and Climate Watch, <https://www.climatewatchdata.org/>.

⁴ A number of U.S. states have taken action requiring GHG emission reductions. The most aggressive actions have come from California and from the Regional Greenhouse Gas Initiative (RGGI)—a coalition of 11 states from the Northeast and Mid-Atlantic regions. The RGGI is a cap-and-trade system that took effect in 2009 that applies to CO₂ emissions from electric power plants. (See CRS Report R41836, *The Regional Greenhouse Gas Initiative: Background, Impacts, and Selected Issues*, by Jonathan L. Ramseur.) California established a cap-and-trade program that took effect in 2013. California’s cap covers multiple GHGs, which account for approximately 85% of California’s GHG emissions. For more details, see the California Air Resources Board website, <https://www.arb.ca.gov/cc/capandtrade/capandtrade.htm>. In addition to its emissions cap, California has adopted a range of other climate change mitigation policies (e.g., renewable energy portfolio standards).

⁵ The 1990 Clean Air Act Amendments established a market-based cap-and-trade program to control the air emissions (sulfur dioxide and nitrogen oxides) that lead to acid rain. Although controversial at its inception, the program is widely considered a success. See, for example, Gabriel Chan et al., *The SO₂ Allowance Trading System and the Clean Air Act Amendments of 1990: Reflections on Twenty Years of Policy Innovation*, Harvard Environmental Economics Program, 2012, https://www.belfercenter.org/sites/default/files/legacy/files/so2-brief_digital4_final.pdf.

renewable energy sources⁷ and carbon capture and sequestration efforts.⁸ In addition, Congress enacted the American Innovation and Manufacturing (AIM) Act of 2020 to phase down hydrofluorocarbons, potent GHGs used in air conditioning and refrigeration equipment.⁹

Members of Congress have expressed a range of perspectives regarding climate change issues. For example, between the 112th Congress and going through the 115th Congress, Members introduced resolutions in both the House and Senate expressing the view that a carbon tax is not in the economic interests of the United States. In 2014 and 2018, the House passed resolutions “expressing the sense of Congress that a carbon tax would be detrimental to the United States economy” (H.Con.Res. 89 and H.Con.Res. 119, respectively). In the 117th Congress, during debate on S.Con.Res. 5, the Senate voted (50-50) on S.Amdt. 887, which would “establish a deficit-neutral reserve fund relating to prohibiting a Federal carbon tax.”

This report provides a comparison of the legislative proposals from the 108th through the 117th Congresses that were and are designed primarily to reduce GHG emissions using market-based approaches such as cap-and-trade or carbon tax/fee programs. As **Figure 1** illustrates, between the 108th and 111th Congresses, most of the market-based climate mitigation bills would have established cap-and-trade systems. Between the 112th and 117th Congresses, most of the introduced bills would have established carbon tax or emissions fee programs.

In the 111th Congress, Members offered multiple and varied proposals,¹⁰ ultimately resulting in the House passage of H.R. 2454, an economy-wide cap-and-trade bill.¹¹ A companion bill in the Senate (S. 1733) was ordered reported from the Committee on Environment and Public Works, but the bill was never brought to the Senate floor for consideration.

In subsequent Congresses, some Members continued to offer GHG emission control legislation, but these proposals saw minimal legislative activity. During that time frame, the U.S. Environmental Protection Agency (EPA) used existing Clean Air Act authorities to promulgate GHG emission standards for key sectors, including the electric power and transportation sectors.¹² Key EPA rulemakings in the electric power sector include the Obama Administration’s 2015 Clean Power Plan (CPP) final rule¹³ and the Trump Administration’s 2019 Affordable Clean Energy (ACE) final rule,¹⁴ which repealed and replaced the CPP. In January 2021, a federal appellate court vacated and remanded the ACE rule.¹⁵ The court also vacated the CPP repeal but

Jan. 19, 2021), [https://www.cadc.uscourts.gov/internet/opinions.nsf/6356486C5963F49185258662005677F6/\\$file/19-1140.correctedopinion.pdf](https://www.cadc.uscourts.gov/internet/opinions.nsf/6356486C5963F49185258662005677F6/$file/19-1140.correctedopinion.pdf).

stayed its mandate until the EPA responds to the court’s remand in a new rulemaking action.¹⁶ Subsequent executive action from the Biden Administration in this setting will likely continue to generate interest and debate in Congress.

The proposals in the 117th Congress range in their scope of emissions covered from CO₂ emissions from fossil fuel combustion to multiple GHG emissions from a broader array of sources. In addition, the proposals differ by how, to whom, and for what purpose the fee revenues or allowance value would be applied. Some economic analyses indicate that policy choices to distribute the tax, fee, or emission allowance revenue would yield greater economic impacts than the direct impacts of the carbon price.¹⁷

The first section of this report provides background information on cap-and-trade and carbon tax or emission fee programs. The second section compares the GHG emission reduction legislation in each Congress (108th-117th).

Figure I. Number and Type of Market-Based GHG Emission Reduction Bills Introduced in 108th Congress Through 117th Congress

Source: Prepared by CRS.

Notes: “Other Approaches” include (1) proposals that did not specify the overall framework but would have provided EPA with the authority to establish a GHG emission reduction program and (2) proposals that combine elements from a cap-and-trade system with price control features in a carbon tax or emissions fee system, sometimes described as hybrid approaches.

Background

Over the last 15 years, broad GHG emission reduction legislation has generally involved market-based approaches—such as cap-and-trade systems or carbon tax programs—that rely on private-sector choices and market forces to minimize the costs of emission reductions and spur innovation.¹⁸ Both carbon tax and emissions cap-and-trade programs would place a price—

¹⁶ See CRS Insight IN11633, *Clean Air Act: Electricity Sector and Greenhouse Gas Standards*, by Kate C. Shouse.

¹⁷ For more information, see CRS Report R45625, *Attaching a Price to Greenhouse Gas Emissions with a Carbon Tax or Emissions Fee: Considerations and Potential Impacts*, by Jonathan L. Ramseur and Jane A. Leggett.

¹⁸ In some instances, legislation would have directed EPA to establish a GHG emissions reduction program with a

directly or indirectly—on GHG emissions or their inputs (e.g., fossil fuels), both would increase the price of fossil fuels for the consumer, and both would reduce GHG emissions to some degree. Preference between the two approaches ultimately depends on which variable policymakers prefer to precisely control: emission levels or emission prices. As a practical matter, these market-based policies may include complementary or hybrid designs, incorporating elements to increase certainty in price or emissions quantity. For example, legislation could provide mechanisms for adjusting a carbon tax/fee if a targeted range of emissions reductions were not achieved in a given period. Alternatively, legislation could include mechanisms that would bound the range of market prices for a cap-and-trade system's emissions allowances to improve price certainty.

What Is a GHG Emissions Cap-and-Trade System?

A GHG cap-and-trade system creates an overall limit, or cap, on GHG emissions from certain sources. Cap-and-trade programs can vary by the sources covered, which often include major emitting sectors (e.g., power plants and carbon-intensive industries), fuel producers and/or processors (e.g., coal mines or petroleum refineries), or some combination of both.

The emissions cap is partitioned into *emission allowances*. Typically, in a GHG cap-and-trade system, one emission allowance represents the authority to emit one metric ton¹⁹ of carbon dioxide-equivalent (mtCO₂e).²⁰ The emissions cap creates a new commodity—the emission allowance. Policymakers may decide to distribute the emission allowances to covered entities at no cost (based on, for example, previous years' emissions), sell the allowances (e.g., through an auction), or use some combination of these strategies. The distribution of emission allowances is typically a source of significant debate during a cap-and-trade program's development, because the allowances have monetary value.

At the end of each established compliance period (e.g., a calendar year or multiple years), covered sources submit emission allowances to an implementing agency to cover the number of tons emitted. If a source did not provide enough allowances to cover its emissions, the source would be subject to penalties. Covered sources would have a financial incentive to make reductions beyond what is required, because they could (1) sell or trade unused emission allowances to entities that face higher costs to reduce their facility emissions, (2) reduce the number of emission allowance they need to purchase, or (3) bank them, if allowed, to use in a future year.

The use of emission offsets as a compliance option received attention during debate over cap-and-trade programs. An offset is a measurable reduction, avoidance, or sequestration of GHG emissions from a source not covered by an emission reduction program. Economic analyses of cap-and-trade proposals concluded that offset treatment (i.e., whether or not to allow their use

market-based approach as one option. An alternative approach to a market-based system might involve regulatory directives that require emission performance standards for specific sources or the application of best available control technology.

¹⁹ A metric ton is approximately 2,205 pounds. A short ton equals 2,000 pounds.

²⁰ This term of measure (CO₂e) is used because GHGs vary by global warming potential (GWP). GWP is an index developed by the Intergovernmental Panel on Climate Change (IPCC) that allows comparisons of the heat-trapping ability of different gases over a period of time, typically 100 years. Consistent with international GHG reporting requirements, EPA's most recent GHG inventory (2018) uses the GWP values presented in the IPCC's 2007 Fourth Assessment Report. For example, based on these GWP values, a ton of methane is 25 times more potent than a ton of CO₂ when averaged over a 100-year time frame. The IPCC has since updated the 100-year GWP estimates, with some increasing and some decreasing. For example, the IPCC 2013 Fifth Assessment Report reported the 100-year GWP for methane as ranging from 28 to 36. EPA compares the 100-year GWP values in Table 1-3 of its 2018 GHG Inventory.

and, if so, to what degree) would have a substantial impact on overall program cost. This is because some emissions and sources often not covered in cap-and-trade programs can reduce emissions at a lower cost per ton than many typically covered sources. However, the use of offsets generates considerable controversy, primarily over the concern that difficult-to-assess or fraudulent offsets could create uncertainty about the quantity of emission reductions.²¹

In addition, other mechanisms—such as allowance banking or borrowing—may be included to increase the flexibility of the program and, generally, reduce the costs.

What Is a Carbon Tax or Emissions Fee?

In a carbon tax or emissions fee program, policymakers attach a price to GHG emissions or the inputs that create them. A carbon tax/fee on emissions or emissions inputs—namely fossil fuels—would increase the relative price of the more carbon-intensive energy sources. This result is expected to spur innovation in less carbon-intensive technologies and stimulate other behavior that may decrease emissions.²²

Economic modeling indicates that a carbon tax/fee approach could achieve emission reductions, the level of which would depend on the scope and stringency (i.e., tax or fee level) of the program.²³ For example, to address emissions from fossil fuel combustion—76% of total U.S. GHG emissions²⁴—policymakers could apply a tax/fee to fossil fuels at approximately 3,000 entities, including coal mines, petroleum refineries, and entities required to report natural gas deliveries.²⁵

A carbon tax/fee would generate a new revenue stream. The magnitude of the revenues would depend on the scope and rate of the tax or fee, the responsiveness of covered entities in reducing their potential emissions, and multiple other market factors. A 2016 Congressional Budget Office study estimated that a \$25/ton carbon tax would yield approximately \$100 billion in the first year of the program.²⁶

When designing a carbon tax/fee system, one of the more controversial and challenging questions for policymakers is how, to whom, and for what purpose the new tax or fee revenues could be applied. Congress would face the same issues that would be encountered during a debate over emission allowance value distribution in a cap-and-trade system.

When deciding how to allocate the revenues, policymakers would encounter trade-offs among objectives. The central trade-offs involve minimizing economy-wide costs, lessening the costs borne by specific groups—particularly low-income households and displaced workers or communities—and supporting a range of specific policy objectives.

²¹ Both the RGGI and California cap-and-trade systems allow offsets as a compliance option (see footnote 4).

²² This differs from a price system that applies to energy content, such as a tax based on British thermal units (Btu). In 1993, President Clinton proposed a deficit reduction package that included a tax based on energy content, measured in Btu. The goals of the 1993 Btu tax proposal were to promote energy conservation and raise revenue. At the time, the proposed tax would have generated a new revenue stream of about \$30 billion per year. The proposal was met with strong opposition and was not enacted; Congress ultimately enacted an approximately five-cent-per-gallon increase in the motor fuels taxes.

²³ See, for example, Alexander R. Barron et al., “Policy Insights from the EMF 32 Study on U.S. Carbon Tax Scenarios,” *Climate Change Economics*, vol. 9, no. 1 (2018).

²⁴ EPA, *Inventory of U.S. Greenhouse Gas Emissions and Sinks, 1990-2017*, April 2019.

²⁵ See Table A-1 in CRS Report R45625, *Attaching a Price to Greenhouse Gas Emissions with a Carbon Tax or Emissions Fee: Considerations and Potential Impacts*, by Jonathan L. Ramseur and Jane A. Leggett.

²⁶ Congressional Budget Office, *Options for Reducing the Deficit: 2017-2026*, 2016.

A primary argument against a carbon tax/fee system (and a cap-and-trade program) is the concern about the economy-wide costs that a carbon price could impose. The potential costs would depend on a number of factors, including the magnitude, design, and use of revenues of the carbon tax or fee.

Others who may oppose a carbon tax system express opposition to federal taxes in general or the possibility that the revenues would enable greater federal spending. Owners of coal resources, in particular, would likely lose asset values under a carbon tax system—as under a cap-and-trade system—to the degree that coal becomes less competitive under the costs of emission reductions.

GHG Emission Reduction Legislation by Congress

This section compares GHG emission reduction legislation from the 108th Congress to the 116th Congress by including a separate legislative table for each Congress.²⁷ The tables compare the bills by their overall framework, scope, stringency, and selected design elements. Categories of comparison include the following:

- **General framework:** the proposed program structure—emissions cap, emissions tax or fee, or some combination of both—and scope in terms of emissions covered (multiple GHG emissions or just CO₂ emissions).
- **Covered entities/materials:** the industries, sectors, or materials that would be subject to the program.
- **Emissions limit or target:** the GHG or CO₂ emissions target or cap for a particular year. Some targets/caps would apply only to covered sources; others apply to total U.S. GHG emissions.
- **Distribution of allowance value or tax revenue:** how emission allowance value or carbon tax or fee revenue would be distributed (if applicable).
- **Offset and international allowance treatment:** the degree to which offsets and international allowances could be used for compliance purposes and the types of offset activities that would qualify. Some proposals limit offsets by percentage of required reductions; others limit offsets as a percentage of allowance submissions.
- **Mechanism to address carbon-intensive imports:** a central concern with a U.S. GHG reduction program is that it could raise U.S. prices more than goods manufactured abroad, potentially creating a competitive disadvantage for some domestic businesses, particularly carbon-intensive, trade-exposed industries. Policymakers could address these potential impacts in several ways—for example, through border adjustments, tax rebates, or emission allowances provided at no cost to selected industrial sectors.
- **Additional GHG reduction measures:** other mechanisms that are designed to further reduce GHG emissions that are not covered in the central program.

²⁷ One GHG emission reduction bill was introduced in the 107th Congress. Sen. Jeffords introduced S. 556, which would have amended the Clean Air Act to reduce CO₂ emissions from electric power plants to below 1990 levels.

Table I. GHG Emission Reduction Proposals: 108th Congress

Ordered Chronologically by Introduced Date

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
<p>S. 139 Lieberman Jan. 9, 2003 <i>Discharged by unanimous consent by the Senate Committee on Environment and Public Works on Oct. 29, 2003</i> S.Amdt. 2028, which contained similar provisions, was not agreed to on Oct. 30, 2003</p>	<p>Cap-and-trade system for GHG emissions from multiple sectors</p>	<p>Electric power, industrial, or commercial entities that emit over 10,000 mtCO₂e annually; any refiner or importer of petroleum products for transportation use that, when combusted, will emit over 10,000 mtCO₂e annually; and any importer or producer of HFC, PFC, and SF₆ that, when used, will emit over 10,000 mtCO₂e</p>	<p>Cap of 5,896 mtCO₂e for covered sources by 2010 (equivalent to 2000 levels), reduced by the level of emissions from non-covered sources; cap of 5,123 mtCO₂e for covered sources by 2016 (equivalent to 1990 levels), reduced by the level of emissions from non-covered sources</p>	<p>Determined by the Secretary of Commerce; allowances provided to covered entities at no cost and to the newly established, nonprofit Climate Change Credit Corporation, which may use allowance to help energy consumers with increased prices and provide transition assistance to dislocated workers and communities</p>	<p>From 2010 through 2015, up to 15% of submitted allowances can come from domestic or international offsets; after 2015, 10% of submitted allowance can come from offsets</p>	<p>No specific provision</p>	<p>No specific provision</p>

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
S. 150 Jeffords Jan. 25, 2005	Cap-and-trade system for CO ₂ emissions from power plants; also addresses other air pollutants (mercury, sulfur dioxide, nitrogen oxide)	Fossil-fuel-fired electric generating facilities with a capacity of greater than 15 megawatts	Cap on electric power emissions of 2.05 billion metric tons in 2010	In 2010, EPA allocates free allowance to the following: 60% to households to alleviate increased electricity prices 6% for worker transition assistance 20% for renewable energy and energy efficiency 10% to electricity generation facilities 1% for forest sequestration 2% for geologic sequestration	No specific provision	No specific provision	No specific provision
S. 342 McCain Feb. 10, 2005	Cap-and-trade system for GHG emissions from multiple sectors	Electric power, industrial, or commercial entities that emit over 10,000 mtCO ₂ e annually; any refiner or importer of petroleum products for transportation use that, when	Cap of 5,896 mtCO ₂ e for covered sources by 2010 (equivalent to 2000 levels),	Determined by the Secretary of Commerce; allowances provided to covered entities at no cost and to the newly established, nonprofit Climate Change Credit Corporation, which	Up to 15% of submitted allowances can come from domestic or international offsets; if offsets account for 15% of allowances, at	No specific provision	No specific provision

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
		combusted, will emit over 10,000 mtCO _{2e} annually; and any importer or producer of HFC, PFC, and SF ₆ that, when used, will emit over 10,000 mtCO _{2e}	reduced by the level of emissions from non-covered sources	may use allowance to help energy consumers with increased prices and provide transition assistance to dislocated workers and communities, among other objectives	least 1.5% must come from agricultural sequestration		
H.R. 759 Gilchrest Feb. 10, 2005	Cap-and-trade system for GHG emissions from multiple sectors	Electric power, industrial, or commercial entities that emit over 10,000 mtCO _{2e} annually; any refiner or importer of petroleum products for transportation use that, when combusted, will emit over 10,000 mtCO _{2e} annually; and any importer or producer of HFC, PFC, and SF ₆ that, when used, will emit over 10,000 mtCO _{2e}	Cap of 5,896 mtCO _{2e} for covered sources by 2010 (equivalent to 2000 levels), reduced by the level of emissions from non-covered sources	Determined by the Secretary of Commerce; allowances provided to covered entities at no cost and to the newly established, nonprofit Climate Change Credit Corporation, which may use allowance to help energy consumers with increased prices and provide transition assistance to dislocated workers and communities, among other objectives	Up to 15% of submitted allowances can come from domestic or international offsets; if offsets account for 15% of allowances, at least 1.5% must come from agricultural sequestration	No specific provision	No specific provision
H.R. 1451 Waxman Mar. 17, 2005	Directs EPA to issue regulations to meet CO ₂ emissions goals; may include a market-based approach; also addresses other air	Fossil-fuel-fired electric generating facilities that have a capacity of greater than 25 megawatts	1990 CO ₂ levels for power plants by 2010	No specific provision	No specific provision	No specific provision	No specific provision

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
	pollutants (mercury, sulfur dioxide, nitrogen oxide)	and generate electricity for sale					
S. 730 Leahy Apr. 6, 2005	EPA determines the framework of the program; also addresses other air pollutants (mercury, sulfur dioxide, nitrogen oxide)	Fossil-fuel-fired electric generating facilities (no minimum threshold)	Cap on electric power emissions of 2.05 billion metric tons in 2010	No specific provision	No specific provision	No specific provision	No specific provision
H.R. 1873 Bass Apr. 27, 2005	Cap-and-trade system for CO ₂ emissions from electricity sector; also addresses other air pollutants (mercury, sulfur dioxide, nitrogen oxide)	Fossil-fuel-fired electric generating facilities that have a capacity of greater than 25 megawatts and generate electricity for sale	Cap on electric power emissions of 2006 levels in 2010; lowered to 2001 levels in 2015	Allotted to covered sources at no cost based on previous years emission levels (minus a reserve set aside for new units)	Determined by EPA	No specific provision	No specific provision
S. 1151 McCain May 26, 2005	Cap-and-trade system for GHG emissions from multiple sectors	Electric power, industrial, or commercial entities that emit over 10,000 mtCO ₂ e annually; any refiner or importer of petroleum products for transportation use that, when combusted, will emit over 10,000 mtCO ₂ e annually; and any	Cap of 5,896 mtCO ₂ e for covered sources by 2010 (equivalent to 2000 levels), reduced by the level of emissions	Determined by the Secretary of Commerce; allowances provided to covered entities at no cost and to the newly established, nonprofit Climate Change Credit Corporation, which may use allowance to help energy consumers with increased prices	Up to 15% of submitted allowances can come from domestic or international offsets; if offsets account for 15% of allowances, at least 1.5% must come from	No specific provision	No specific provision

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
		importer or producer of HFC, PFC, and SF ₆ that, when used, will emit over 10,000 mtCO _{2e}	from non-covered sources	and provide transition assistance to dislocated workers and communities, among other objectives	agricultural sequestration		
H.R. 2828 Inslee June 9, 2005	Cap-and-trade system for GHG emissions from multiple sectors	Electric power, industrial, or commercial entities that emit over 10,000 mtCO _{2e} annually; any refiner or importer of petroleum products for transportation use that, when combusted, will emit over 10,000 mtCO _{2e} annually; and any importer or producer of HFC, PFC, and SF ₆ that, when used, will emit over 10,000 mtCO _{2e}	Cap of 5,896 mtCO _{2e} for covered sources by 2010 (equivalent to 2000 levels), reduced by the level of emissions from non-covered sources	Determined by the Secretary of Commerce; allowances provided to covered entities at no cost and to the newly established, nonprofit Climate Change Credit Corporation, which may use allowance to help energy consumers with increased prices and provide transition assistance to dislocated workers and communities, among other objectives	Up to 15% of submitted allowances can come from domestic or international offsets; if offsets account for 15% of allowances, at least 1.5% must come from agricultural sequestration	No specific provision	No specific provision
H.R. 5049 Udall Mar. 29, 2006	Cap-and-trade system for GHG emissions from multiple sectors, with a price ceiling of \$25 per ton of carbon, indexed to inflation	Emissions from domestic and imported fossil fuels; emissions from agricultural, industrial, and manufacturing processes, excluding methane from animals	Maintains existing emission levels; the number of allowances distributed based on emissions	20% to electric power, fossil fuel production, and energy intensive industries 15% to states for worker transition assistance	Provides additional allowances for sequestration projects	No specific provision	No specific provision

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
			from years prior to enactment, without reductions in subsequent years	5% to states for energy assistance to low-income households 25% to the Department of Energy to support energy research and development 10% to the Department of State to invest in low-emission and emission-free policies in developing countries 25% to the Department of the Treasury to be sold at auction with the proceeds deposited in the Treasury			
S. 2724 Carper May 4, 2006	Cap-and-trade system for CO ₂ emissions from electricity sector; also addresses other air pollutants (mercury, sulfur dioxide, nitrogen oxide)	Fossil-fuel-fired electric generating facilities that have a capacity of greater than 25 megawatts and generate electricity for sale	2001 CO ₂ emission levels by 2015	Allotted to covered sources based on previous years emission levels	Determined by EPA	No specific provision	No specific provision
H.R. 5642 Waxman June 20, 2006	Cap-and-trade system for GHG	Determined by EPA	1990 GHG levels for covered sources by 2020; 80% below 1990	Determined by the President based on plan submitted to Congress; sell via auction and distribute to non-covered sources to	No specific provision	No specific provision	EPA to promulgate additional regulations to reduce GHG emissions,

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
			levels by 2050	achieve specified goals: maximize public benefit, mitigate energy costs to consumers, provide worker transition assistance, among others			including performance standards, efficiency standards, technology requirements, among others; directs Department of Energy to promulgate renewable portfolio standards
S. 3698 Jeffords July 20, 2006	Directs EPA to issue regulations to meet GHG emissions goals; may include a market-based approach	Determined by EPA	1990 GHG levels by 2020; 80% below 1990 levels by 2050	Determined by EPA; allowances to covered entities; remaining allowances to households, communities, and other groups for various objectives	No specific provision	No specific provision; allowances may be allotted to companies that experience disproportionate impacts from lower-carbon economy	Directs EPA to issue CO ₂ emissions standards for vehicles and CO ₂ emissions standards for new power plants, create low-carbon electricity generation standards and trading program, promulgate

Table 3. GHG Emission Reduction Proposals: 110th Congress

Ordered Chronologically by Introduced Date

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
S. 280 Lieberman Jan. 12, 2007	Cap-and-trade system for GHG emissions from multiple sectors	Electric power, industrial, or commercial entities that emit over 10,000 mtCO ₂ e annually; any refiner or importer of petroleum products for transportation use that, when combusted, will emit over 10,000 mtCO ₂ e annually; and any importer or producer of HFC, PFC, and SF ₆ that, when used, will emit over 10,000 mtCO ₂ e	1990 GHG levels for covered sources by 2020, reduced by the level of emissions from non-covered sources	Determined by EPA	Up to 15% of submitted allowances can come from domestic or international offsets; if offsets account for 15% of allowances, at least 1.5% must come from agricultural sequestration	No specific provision	No specific provision
S. 309 Sanders Jan. 16, 2007	Determined by EPA, but must be a market-based program for GHG emissions	Determined by EPA through a rulemaking process	1990 GHG levels for all sources by 2020	Determined by EPA	No specific provision	No specific provision	GHG emission standards for vehicles, new electric power plants, and an energy efficiency performance standard
S. 317 Feinstein Jan. 17, 2007	Cap-and-trade system for GHG emissions from electricity sector	Fossil-fuel-fired electric generating facilities with a capacity of greater than 25 megawatts	5% below 2001 GHG levels for electric	Initially provided to covered entities at no cost; percentage of allowances sold via auction gradually	Up to 25% of required reductions may be achieved with EPA-approved	No specific provision	No specific provision

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
			generators by 2020	increases: by 2036, 100% sold via auction; activities funded by auction revenues include technology development and energy efficiency	international credits		
H.R. 620 Olver Jan. 22, 2007	Cap-and-trade system for GHG emissions from multiple sectors	Electric power, industrial, or commercial entities that emit over 10,000 mtCO ₂ e annually; any refiner or importer of petroleum products for transportation use that, when combusted, will emit over 10,000 mtCO ₂ e annually; and any importer or producer of HFCs, PFCs, or SF ₆ that, when used, will emit over 10,000 mtCO ₂ e	1990 GHG levels for covered sources by 2020, reduced by the level of emissions from non-covered sources	Determined by EPA	Up to 15% of allowance submission can come from domestic and/or international offsets	No specific provision	No specific provision
S. 485 Kerry Feb. 1, 2007	Cap-and-trade system for GHG emissions	Determined by EPA through a rulemaking process	1990 GHG levels for covered sources by 2020	Determined by the President; Congress may enact alternative plan within one year	No specific provision	No specific provision	No specific provision

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
H.R. 1590 Waxman Mar. 20, 2007	Cap-and-trade system for GHG emissions	Determined by EPA through a rulemaking process	1990 GHG levels for all sources by 2020	Determined by the President; Congress may enact alternative plan within one year	No specific provision	No specific provision	GHG emission standards for vehicles, energy efficiency standards, renewable portfolio standards
S. 1177 Carper Apr. 20, 2007	Cap-and-trade system for CO ₂ emissions from electricity sector; also addresses other air pollutants (mercury, sulfur dioxide, nitrogen oxide)	Fossil-fuel-fired electric generating facilities that have a capacity of greater than 25 megawatts and generate electricity for sale	2001 CO ₂ emission levels by 2015	Allotted to covered sources based on previous years emission levels	Determined by EPA	No specific provision	No specific provision
H.R. 2069 Stark Apr. 26, 2007	Tax starting at \$10/short ton of carbon content in taxable fuels, which equates to approximately \$2.70/tCO ₂ emissions The rate increases \$10 per year (in nominal dollars)	Manufacturers, producers, or importers who sell a taxable fuel, which includes coal, petroleum and petroleum products, and natural gas	Tax rate freeze if CO ₂ emissions do not exceed 20% of U.S. 1990 CO ₂ emissions by 2020	No specific provision	NA	No specific provision	No specific provision

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
S. 1766 Bingaman July 11, 2007	Cap-and-trade system for GHG emissions from multiple sectors with allowance price ceiling: in 2012, \$12/ton, increasing by 5% annually plus inflation	Petroleum refineries, natural gas processing plants, and imports of petroleum products, coke, or natural gas; entities that consume more than 5,000 tons of coal a year; importers of HFCs, PFC, SF ₆ , N ₂ O, or products containing such compounds, and adipic acid and nitric acid plants, aluminum smelters, and facilities that emit HFCs as a byproduct of HCFC production	1990 GHG levels for covered sources by 2020	In 2012, 53% of allowances allocated to covered and certain industrial entities 23% allocated to states and for sequestration and early reduction activities 24% are auctioned to fund low-income assistance, carbon capture and storage, and adaptation activities The percentage auctioned increases steadily, reaching 53% by 2030	Unlimited use of domestic offsets; international offsets limited to 10% of a regulated entity's emissions target	International reserve allowances must accompany imports of any covered GHG intensive goods and primary products to the United States Least developed nations or those that contribute no more than 0.5% of global emissions are excluded	No specific provision
H.R. 3416 Larson Aug. 3, 2007	Tax on CO ₂ content on fossil fuels, starting at \$15/short ton CO ₂ emissions, increasing by 10% annually plus inflation	Manufacturers, producers, or importers of coal, petroleum, and natural gas	No specific provision	In first year (2008), approximately 76% would support a payroll tax rebate 16% would fund clean energy technology 8% would support affected industry transition assistance	Allows for domestic offset projects (as prescribed by the Secretary of the Treasury) to be submitted as tax credits or tax refunds	No specific provision other than direct assistance to affected industries (determined by the Secretaries of the Treasury and Labor)	No specific provision

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
				(declining to zero by 2017)			
H.R. 4226 Gilchrest Nov. 15, 2007	Cap-and-trade system for GHG emissions from multiple sectors A Carbon Market Efficiency Board may implement cost-relief measures	Electric power, industrial, or commercial entities that emit over 10,000 mtCO ₂ e annually; refiners or importers of petroleum products for transportation use that, when combusted, will emit over 10,000 mtCO ₂ e annually; and importers or producers of HFCs, PFCs, or SF ₆ that, when used, will emit over 10,000 mtCO ₂ e	85% of 2006 GHG levels from covered sources, reduced by the level of emissions from non-covered sources by 2020	Determined by EPA	Up to 15% of allowance submission can come from domestic and/or international offsets	The President may establish a program to require importers to pay the value of GHGs emitted during the production of goods or services imported into the United States from countries that have no comparable emission restrictions to those of the United States	No specific provision
S. 2191 Lieberman Oct. 18, 2007 <i>Ordered reported by the Senate Committee on Environment</i>	Cap-and-trade system for GHG emissions from multiple sectors	Producers or importers of petroleum or coal-based liquid or gaseous fuel that emits GHGs, or facilities that produce or import more than 10,000 mtCO ₂ e of GHG chemicals annually;	Emission cap for covered sources in 2020 is 4.924 billion tCO ₂ e (19% below 2005 levels	In 2012: 40% of allowances allocated to covered electric utilities, industrial facilities, and coops 9% allocated to states for conservation, extra	Up to 15% of allowance requirement may be achieved through domestic offsets; international	International reserve allowances must accompany imports of any covered GHG-intensive goods and primary	Low carbon fuel standard for transportation fuels

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
<i>and Public Works on Dec. 5, 2007</i>		facilities that use more than 5,000 tons of coal annually; natural gas processing plants or importers (including liquid natural gas [LNG]); or facilities that emit more than 10,000 mtCO _{2e} of HFCs annually as a byproduct of HFC production	for covered sources)	reductions, and other activities 11.5% for various sequestration activities 10% allocated for electricity consumer assistance 5% for early reductions 0.5% for tribal governments 18% (plus an early auction of 6%) auctioned to fund technology deployment, carbon capture and storage, low-income and rural assistance, and adaptation activities	offsets can satisfy an additional 15%	products to the United States Least developed nations or those that contribute no more than 0.5% of global emissions are excluded	
S. 3036 Boxer May 20, 2008 S.Amdt. 4825 <i>(in the nature of substitute) failed a cloture motion on June 6, 2008</i>	Cap-and-trade system for GHG emissions from multiple sectors A Carbon Market Efficiency Board may implement cost-	Producers or importers of petroleum- or coal-based liquid or gaseous fuel that emits GHGs, or facilities that produce or import more than 10,000 mtCO _{2e} of GHG chemicals annually; facilities that use more	Emission cap for covered sources in 2020 is 4.924 billion tCO _{2e} (19% below 2005 levels for covered sources)	A share of allowances are auctioned for deficit reduction increasing from 6.1% in 2012 to 15.99% in 2031 and thereafter The “remainder allowances” are	Up to 15% of allowance requirement may be achieved through domestic offsets; international allowances can	International reserve allowances must accompany imports of any covered GHG-intensive goods and primary	Low carbon fuel standard for transportation fuels

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
	relief measures if necessary	than 5,000 tons of coal annually; natural gas processing plants or importers (including LNG); or facilities that emit more than 10,000 mtCO _{2e} of HFCs annually as a byproduct of HFC production		<p>distributed in 2012 (adjusted in future years) as follows:</p> <ul style="list-style-type: none"> 38% of allowances to covered electric utilities, industrial facilities, and co-ops 10.5% to states for conservation, extra reductions, and other activities 7.5% for various sequestration activities 11% allocated for electricity and natural gas consumer assistance 5% for early reductions 0.5% for tribal governments 1% for methane reduction projects 21.5% (plus an early auction of 5%) auctioned to fund technology deployment, carbon capture and storage, 	satisfy an additional 15%	<p>products to the United States</p> <p>Least developed nations or those that contribute no more than 0.5% of global emissions are excluded</p>	

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
				low income and rural assistance, and adaptation activities, as well as program management			
H.R. 6186 Markey June 4, 2008	Cap-and-trade system for GHG emissions from multiple sectors	Electric power or industrial facilities that emit over 10,000 mtCO ₂ e; producers or importers of petroleum or coal-based liquid products that, when combusted, will emit over 10,000 mtCO ₂ e annually; local distribution companies that deliver natural gas that, when combusted, will emit over 10,000 tCO ₂ e annually; producers or importers of HFCs, PFCs, SF ₆ , or NF ₃ that, when used, will emit over 10,000 mtCO ₂ e; sites at which CO ₂ is geologically sequestered on a commercial scale	Emission cap for covered sources in 2020 is 4.983 billion tCO ₂ e	Between 2012 and 2019, 6% of allowances would be distributed to manufacturers of “trade-exposed primary goods” Remaining 94% auctioned (100% by 2020), with revenues distributed (in FY2010-FY2019) as follows: 58.5% to middle- and low-income households as tax credits and/or rebates 12.5% for development and promotion of low-carbon technology 12.5% for energy efficiency programs	Up to 15% of allowance requirement may be achieved through domestic offsets; international offsets or allowances can satisfy an additional 15%	International reserve allowances must accompany imports of any covered GHG intensive goods and primary products to the United States Least developed nations or those that contribute no more than 0.5% of global emissions are excluded	EPA to develop emission performance standards for certain non-covered entities that exceed 10,000 tCO ₂ e per year Low-carbon fuel standard for transportation fuels Performance standard for certain coal-fired power plants to capture and geologically sequester not less than 85% of their CO ₂ emissions

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
				4.5% for biological sequestration 1.5% for worker transition assistance 2% for domestic adaptation efforts 1.5% for protection of natural resources 1.5% for international forest protection 3.5% for international clean technology 2% for international adaptation efforts			
H.R. 6316 Doggett June 19, 2008	Cap-and-trade system for GHG emissions from multiple sectors A Carbon Market Efficiency Board may implement cost-relief measures	Producers or importers of petroleum- or coal-based liquid or gaseous fuel that emits GHGs, or facilities that produce or import more than 10,000 mtCO ₂ e of GHG chemicals annually; facilities that use more than 5,000 tons of coal annually; natural gas processing plants or importers (including	Emission cap for covered sources in 2020 is 6.087 billion mtCO ₂ e	In 2012, 5% of the allowances are allocated to electric generators; 10% are allocated to energy intensive industries Remaining allowances are auctioned with revenues used for the following: 54% for consumer assistance (66% of which goes towards	Up to 10% of allowance requirement may be achieved through domestic offsets; international allowances can satisfy an additional 15%	International reserve allowances must accompany imports of any covered GHG-intensive goods and primary products to the United States Least developed nations or those that contribute no more than	EPA to promulgate regulations that address emissions in uncovered sectors

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
		LNG); or, facilities that emit more than 10,000 mtCO ₂ e of HFCs annually as a byproduct of HFC production		providing health insurance coverage, the remainder for rebates and tax relief) 15% of revenues for deficit reduction 11.4% for international activities 7.5% for energy efficiency 7% for natural resource adaptation 7% for green energy research 4% for worker assistance 3% for forestry and agricultural activities 2.7% for states and tribes 2% for transportation alternatives 1% for early action 0.4% for education		0.5% of global emissions are excluded

Table 4. GHG Emission Reduction Proposals: 111th Congress

Ordered Chronologically by Introduced Date

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
H.R. 594 Stark Jan. 15, 2009	Tax on CO ₂ content in fossil fuels, starting at \$10/short ton, increasing by \$10 per year	Manufacturers, producers, or importers who sell a taxable fuel, which includes coal, petroleum and petroleum products, and natural gas	Tax freezes if CO ₂ emissions do not exceed 20% of U.S. 1990 CO ₂ emissions by 2020	No specific provision	NA	No specific provision	No specific provision
H.R. 1337 Larson Mar. 5, 2009	Tax on CO ₂ content in fossil fuels, starting at \$15/short ton, increasing by \$10 each year emissions target is not met	Manufacturers, producers, or importers of coal, petroleum, and natural gas	EPA is to establish (within five years after enactment) annual CO ₂ emission targets in order to reach goal of 80% below 2005 CO ₂ emissions by 2050	In first year: 76% would support a payroll tax rebate 16% would fund clean energy technology 8% would support affected industry transition assistance (declining to zero by 2017)	Instructs Department of the Treasury (in consultation with Department of Energy) to submit a report of qualified offset projects but does not allow for projects to generate tax credits	Department of the Treasury imposes a carbon equivalency fee on imported carbon-intensive goods, including steel, aluminum, and paper; fee based on emissions associated with production of carbon-intensive goods	No specific provision
H.R. 1666 Doggett Mar. 23, 2009	Cap-and-trade system for GHG emissions, with an oversight board to manage	Not explicitly defined	Target of 4.9 billion mtCO ₂ e for covered	Oversight board administers auctions to manage the allowance price path; precise use of	No specific provision	No specific provision	No specific provision

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
	price path between 2012 and 2019		entities by 2020	auction revenues is not specified			
H.R. 1683 McDermott Mar. 24, 2009	Hybrid cap/tax system for GHG emissions: covered persons must purchase an emission permit from the Department of the Treasury when a “GHG emission substance” is produced or enters the United States; permits may not be sold or exchanged; price for emission permits based on achieving annual emission targets	Coal producers, petroleum refineries; producers of other GHG emission substances (including natural gas, among others); importers of GHG emission substances	25% below 2005 GHG emissions by 2020	Establishes trust fund that would receive appropriations equal to revenue received by selling emission permits Precise use of the revenue is not specified	No specific provision	Department of the Treasury imposes a GHG emission permit equivalency fee on imported carbon-intensive goods, including steel, aluminum, and paper	No specific provision
H.R. 1862 Van Hollen Apr. 1, 2009	Cap-and-trade system for CO ₂ emissions from multiple sectors	Person who makes the first sale in United States of coal, oil, natural gas, and any fossil-fuel-derived products used as a combustible fuel	25% below 2005 CO ₂ emissions by 2020	100% of allowances sold via auction; proceeds used to fund consumer dividend payments; each month, every person with a Social Security number	No specific provision	Department of the Treasury imposes a carbon equivalency fee on imported carbon-intensive goods, including	No specific provision

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
				would receive an equal payment		steel, aluminum, and paper	
H.R. 2380 Inglis May 13, 2009	Tax on fossil fuels, starting at \$15/short ton of CO ₂ emissions, and increasing by approximately 6.5% each year, plus cost-of-living adjustments	Manufacturers, producers, or importers of coal, petroleum, and natural gas	No specific provision	Tax revenue used to offset a corresponding reduction in payroll tax rates (employee, employer, and self-employed)	No specific provision	Imposes a tax on “imported taxable products” in relation to fossil fuels used or the CO ₂ emissions generated during the product’s manufacturing process	No specific provision
H.R. 2454 Waxman-Markey May 15, 2009 <i>Reported by the Committee on Energy and Commerce on June 5, 2009</i> <i>Passed the House on June 26, 2009</i> For more information, see CRS Report R40643, <i>Greenhouse Gas Legislation: Summary and Analysis of H.R. 2454 as Passed by</i>	Cap-and-trade system for GHG emissions from multiple sectors	Electricity generators, various fuel producers and importers, fluorinated gas producers and importers, geological sequestration sites, various industrial sources, and local distribution companies (LDCs) that deliver natural gas Covered entity coverage is phased in by category so that all of the above are under the cap in 2016	17% below 2005 emissions from covered sources by 2020	Emission allowance value distributed (as no-cost allowances or auction revenue) in the following manner in 2016: 30% (at minimum) to electricity LDCs; 0.5% for small electric LDCs; 9% to natural gas LDCs; 1.5% to states for home-heating oil consumers 15% directly to low-income consumers 13.4% to energy-intensive, trade-exposed industries;	In 2016, approximately 27% of an entity’s allowance obligation can be satisfied with offsets; this percentage increases to 36% by 2030 Up to half of an entity’s offsets can come from domestic sources and up to half from international sources Unless otherwise determined by	Energy-intensive, trade-exposed industries to receive allowances at no cost until phased out in mid-2030s; and EPA to promulgate rules establishing an international reserve allowance system for any covered good of an eligible industrial sector	Establishes a separate cap-and-trade program that controls HFC emissions Directs EPA to establish emission performance standards for select sources not covered by the emissions cap

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
<i>the House of Representatives, coordinated by Mark Holt and Gene Whitney</i>				up to 3.5% to merchant coal units; 2% to petroleum refineries plus 0.25% for small business refineries; up to 1.5% for certain long-term power contract operators 7.1% to states to support renewable energy and energy efficiency efforts 6% to promote technological advances 5% to reduce international deforestation 0.2% for deficit reduction 5% to further other objectives	EPA, covered entities may use unlimited amount of international allowances from “qualifying programs”	from a covered country Exemptions are provided for (1) least developed countries, (2) countries that emit less than 0.5% of global GHG emissions, and (3) countries meeting specific criteria	
S. 1733 Kerry-Boxer Sept. 30, 2009 <i>Reported by the Committee on Environment and Public Works (a</i>	Cap-and-trade system for GHG emissions from multiple sectors	Electricity generators, various fuel producers and importers, fluorinated gas producers and importers, geological sequestration sites, various industrial	20% below 2005 emissions from covered sources by 2020	Emission allowance value is distributed in the following manner in 2016: 25.8% (at minimum) to electricity LDCs;	In 2016, approximately 35% of an entity’s allowance submission can comprise offsets; up to 75% of an entity’s offsets	Trade-exposed, carbon-intensive industries to receive allowances at no cost; in addition, the bill states:	Establishes a separate cap-and-trade program that controls HFCs

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
<p><i>“Manager’s Amendment” in the nature of substitute) on Nov. 5, 2009</i></p>		<p>sources, and LDCs that deliver natural gas Coverage is phased in by category so that all of the above are under the cap in 2016</p>		<p>0.94% for small electric LDCs 7.7% to natural gas LDCs 1.3% to states for home-heating oil consumers 12.9% directly to low-income consumers 12.1% to energy-intensive, trade-exposed industries up to 3.0% to merchant coal units 0.64% to petroleum refineries plus 0.86% for small business refineries and 0.43% for medium refineries up to 1.3% for certain long-term power contract operators 5.97% to states to support renewable energy and energy efficiency efforts</p>	<p>can come from domestic sources and up to 25% from international sources Unless otherwise determined by EPA, unlimited use of international allowances from “qualifying programs”</p>	<p>“It is the sense of the Senate that this Act will contain a trade title that will include a border measure that is consistent with our international obligations and designed to work in conjunction with provisions that allocate allowances to energy-intensive and trade-exposed industries”</p>

	activities, if certain conditions are met			energy” and climate change resiliency activities, including research and development and commercialization of technologies		costs attributable to the emissions fee	
H.R. 3039 Fitzpatrick May 7, 2021	Tax on fossil fuels based on their potential GHG emissions, GHG emissions from specific industrial sources, and GHG emissions from specific products Tax rate set in 2023 at \$35/mtCO _{2e} , increasing annually by 5% plus inflation; if covered emissions do not meet emission reduction schedule, the tax rate increases by an additional \$4	Tax imposed on coal at coal mines and importers, petroleum products at refineries and importers, and natural gas at processors or at point of sale for combustion Tax imposed on facilities—in specific industrial source categories—that emit more than 25,000 mtCO _{2e} per year Tax imposed on facilities that manufacture or import specified products or combust biomass with emissions above 25,000 mtCO _{2e}	Emission reduction schedule for covered emissions starts in 2023 at 4,900 mmtCO _{2e} ; the annual emission schedule is cumulative, reaching 47,100 mmtCO _{2e} in 2033; assuming annual emission levels followed this decreasing schedule, covered emissions would decrease to 4,000 mmtCO _{2e} in 2033	Establishes a trust fund that would receive appropriations equal to 75% of the tax revenue received in the Treasury; the trust fund would provide annual funding for the following infrastructure programs (“as provided in appropriations acts”) between FY2023 and FY2032: 70% to the Federal Highway Trust Fund; 10% to the states as grants to allocate to low-income households; 4.2% for various energy-related research and development objectives, including carbon capture and storage and battery technology; 4.0% for frequent and chronic coastal flooding mitigation and adaptation infrastructure projects;	No specific provisions	Imports of carbon-intensive goods subject to a border tax—determined by the Secretary of the Treasury—that is equivalent to the costs in comparable domestic manufactured goods (associated with the carbon tax) Exporters of goods that are both energy-intensive and trade-intensive may receive a tax refund related to the increased costs of inputs (i.e., fossil fuels) subject to the tax	Establishes a conditional moratorium on Clean Air Act GHG regulations for stationary emissions sources (with some exceptions) Creates a credit system, which phases out after five years, for persons making payments under existing state GHG reduction programs Creates a National Climate Commission to set five-year emission reduction goals between 2027 and 2052 and assess the effectiveness of federal policies in meeting these goals

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
				3.0% for displaced energy workers; 2.5% for the Airport and Airway Trust Fund; 1.5% for the Department of Energy weatherization program; 1.5% for the Abandoned Mine Reclamation Fund; 1.0% for the Reforestation Trust Fund; 0.5% to support agricultural GHG sequestration projects; 0.1% to decrease the environmental impact of renewable energy activities pursuant to Section 931 of the Energy Policy Act of 2005; 0.1% for the Leaking Underground Storage Tank trust fund			
S. 2085 Whitehouse June 16, 2021	Fee on fossil fuels based on their carbon content and certain facilities for GHG emissions Fee set at \$54/ton CO ₂ emissions in	Fee applies to coal at mines and importers, petroleum at refineries and importers, natural gas deliverers (as reported on Energy Information Administration	Fee continues until national GHG emissions are 80% below 2005 levels	The bill provides an annual tax credit for each individual; provides an equivalent benefit to individuals not eligible for the tax credit Provides up to \$10 billion in annual grants to states to be used to	No specific provisions	Imports of carbon-intensive goods subject to a fee—determined by the Secretary of the Treasury—that is equivalent to the difference in (1) costs domestic producers of	Separate fee for fluorinated GHGs Separate fee for GHGs (other than CO ₂ and fluorinated gas emissions) at facilities that (1) are subject to GHG reporting requirements in 40

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
	2023, increasing by 6% plus inflation each year	Form 176) and some natural gas processors; and facilities that (1) are subject to GHG reporting requirements in 40 C.F.R. Part 98 and (2) emit more than 25,000 tons of GHGs annually Fee also applies to certain industrial sources, regardless of their emissions output, including aluminum production, HCFC-22 production and HFC-23 destruction, and fluorinated gas production; this fee starts as a percentage of the fossil fuel fee and increases annually		(1) assist low-income and rural households with energy costs, (2) support job training and worker assistance programs, and (3) assist the state in climate change adaptation or transition to a low-carbon economy; this amount increases annually		comparable products incur due to the carbon price and (2) the comparable costs (e.g., GHG fees) imposed by the nation exporting the material Exporters of energy-intensive goods may receive a refund related to the increased costs of inputs (i.e., fossil fuels) subject to the fee	C.F.R. Part 98 and (2) emit more than 25,000 mtCO ₂ e emissions Additional fee for GHG emissions (described as “associated emissions”) resulting from venting, flaring, and leaking across the coal, natural gas, and petroleum supply chains (as determined by Secretary of the Treasury)
H.R. 4084 Deutch June 23, 2021 <i>This proposal is identical to S. 645 (Whitehouse)</i>	Directs Secretary of the Treasury to estimate the methane (CH ₄) emissions and emission rates	Fee imposed on each company that produces, gathers, processes, or transmits oil or natural gas	No specific provisions	Transfers revenues from the fee on CH ₄ emissions to the National Fish and Wildlife Foundation to provide grants through the National Coastal Resilience Fund	No specific provisions	No specific provisions	No specific provisions

Bill Number, Sponsor, Introduced Date, and Committee or Floor Action	General Framework	Covered Entities/Materials	Emissions Limit or Target	Distribution of Allowance Value or Tax/Fee Revenue	Offset and International Allowance Treatment	Mechanism to Address Carbon-Intensive Imports	Additional GHG Reduction Measures
	<p>from each oil- and natural-gas-producing basin</p> <p>Fee starts in 2023 at \$1,800/ton, increasing annually by 2% plus inflation</p>	<p>Fee on CH₄ emissions based on (1) proportion of oil or natural gas produced in a particular location, or (2) another method of measure proposed by a company and approved by the Secretary</p>
